Experience

Feb 2021 → Dec 2021 **Lead developer** – [Synesis One](#)
reactjs, typescript, rust, solana

Blockchain Data yield farming & staking platform What I do: As a lead developer, I developed data yield farming smart contract using Rust on Solana network especially focusing on code & storage optimizing. And also developed NFTs marketplace smart contract using Rust substrate. And I developed frontend using React.js / Typescript and integrate phantom wallet for Solana network integration. And I also integrated Rust based Solana smart contract into frontend which includes data yield farming logic.

Apr 2020 → Jul 2021 **Lead developer** – [Roci Finance](#)
smartcontracts, solidity, hardhat, reactjs, web3, redux-saga

Liquidity protocol that provides lending, borrowing function with liquidity provide
Github: <https://github.com/christophergroeneveldt/LiquidityPlatform> What I do: As a lead developer, I designed the Roci FI lending platform architecture and smart contract architecture from scratch focused on security and optimization. I suggested to use Proxy and Storage logic for smart contract security improvement and integrated openzeppelin to smart contract for security logic myself. I also took part in smart contract development with contract developers for lending platform contract and developed NFT based User wallet score generate off-chain application using Oracle myself and integrate this into lending platform.

Jan 2018 → Dec 2020 **Full-stack developer** – [Maxos LLC](#)
reactjs, redux-saga, web3js, smartcontracts, solidity, hardhat

Accelerating investor engagement yield farming DApp Github:
<https://github.com/christophergroeneveldt/LaunchPoolTrackerPlatform> What I do: As a Full stack developer, I planned the smart contracts structure with separated contracts and Escrow contracts for security and audit and developed mainly part in smart contracts using Hardhat environment in Solidity. And integrate contracts into FE using Web3.js and Metamask connection into React.js based project.

Jan 2018 → Mar 2020 **Engine developer** – [Vader Servicing LLC](#)
smartcontracts, solidity, hardhat

Liquidity protocol that combines a collateralized stablecoin with liquidity pools
Github: <https://github.com/christophergroeneveldt/VaderProtocol> What I do: As a smart contract developer, I developed Pools and Synth for ERC20 protocol smart contracts using Solidity on Hardhat. And make testcase using Jest for smart contracts developed myself and others. As a problem solver, I solved plenty of issues on security side and gas optimization on contract relationship and code quality.

Feb 2017 → Feb 2020 **Lead developer** – [Kamermans Holding](#)
reactjs, redux-thunk, laravel, web3, smartcontracts, solidity, hardhat

Decentralized Exchange Platform where companies registered in the Caribbean can list ERC-20 tokens. Web:
<https://calahex.com> What I do: As a lead developer, I have designed architecture & DB & UI/UX from scratch with my last experience above myself. I have also suggested and implemented AI based financial solutions to avoid risk from high-changing price of cryptocurrency pairs. And I have developed smart contracts for ERC-20 tokens exchange and management. I recommended my team members (talented & well-experienced developers) on this project and lead them as a PM to archive completion of CALAHEX v1.0

Dec 2016 → Jul 2018 **Full-stack developer** – [Designhubz](#)
wordpress, threejs-editor, unity3d, augmented-reality

AR & 3D model product based eCommerce store What I do: As a full stack developer, I developed VR based UI for each 3D products using Three.js with the function - zoom, move, rotates and make able to change 3D product color not only entire product but also partial color as clients want. And also developed Unity engine for AR based 3D product management.

Apr 2017 → Dec 2017 **Lead developer** – [Africunia Bank](#)
vue.js, ruby-on-rails, smartcontracts, web3, react-native, vuex

AFCASH Banking platform using cryptocurrencies and ERC-20 & TRC-20 tokens Web: [Web: https://www.excoincial.co](https://www.excoincial.co) Mobile(Android): <https://play.google.com/store/apps/details?id=com.africunia.afcashwallet&hl=en> Github: <https://github.com/christophergroeneveldt/ExcoincialPlatform> Tech-stack: Web (React.js + Ruby on Rails + Smart Contracts + Web3.js), Mobile (React Native) What I do: As a lead developer, I have upgraded entire ongoing banking platform v1.0 into v2.0. New features of version 2.0 are integrate ERC-20 & TRC-20 tokens with smart contract using solidity into ongoing platform (only use BTC, BCH before) and upgrade frontend into Vue.js integrating smart contract using web3.js. I provide solution to improve UI/UX design to let newly users can realize and use our platform much more easier by implement AI based high profit experienced client mirroring function. And make trading UI much simpler than v1.0

Oct 2015 → Feb 2017 **Full-stack developer** – [Nano Foundation](#)
c++, rust

Direct acyclic graphs (DAG) to settle transactions across the network Github: https://github.com/christophergroeneveldt/Nano_Cryptocurrency What I do: As a Full stack developer, I developed transaction based network protocol and DAG ledger using C++. And I developed the backend for network server using Rust for user admin and transaction history, network security part.

Jan 2012 → Oct 2014 **Full-stack developer** – [Dermoi](#)
reactjs, next.js, django, python, tensorflow, react-native

Face feature detection based mark-up & treatment website Web: <https://dermoi.com> Mobile(iPhone): <https://apps.apple.com/us/app/dermoi-therapist/id1400669843> What I do: As a full stack developer, I have developed face feature detection engine using Python Tensorflow integrate into platform so let clients can detect their face features automatically from their image and order with correct treatment and mark-up plan. And I upgraded ongoing platform UI into Vue.js / Nuxt.js from normal bootstrap theme based UI.

Apr 2012 → Feb 2014 **Full-stack developer** – [Nisheskin](#)
wordpress, react-native, python, opencv

Website and Mobile application for monitoring the condition of the skin Web: <https://nisheskin.wordpress.com> Mobile: <https://play.google.com/store/apps/details?id=nishe.skin.tracker> <https://apkpure.com/developer/Matej%C5%BD> Github: <https://github.com/christophergroeneveldt/NisheskinPlatform> What I do: As a full stack developer, I developed image processing engine using Python / OpenCV to detect skin condition from the image and calculate proper treatment method engine using Python. And develop hybrid mobile application using React Native and make Advertisement website using Wordpress.

Nov 2010 → Oct 2011 **Full-stack developer** – [ControlTrack](#)
reactjs, redux, laravel, python, tensorflow, yolo

Control and track white & black listed person and people's feature, vehicle detect with LPR, Type, Speed Github: https://github.com/christophergroeneveldt/Detect_Vehicle_type_and_counting_with_livecam_Python What I do: As a full stack developer, I developed python engine to detect the vehicles from live camera as live streaming and counting, detecting type, calculating speed, sumarizing script and integrated this into Golang based backend server. And upgraded the normal HTML/JS/CSS based website into Vue.js based frontend and speed up, optimized the website.

Education

Apr 2011 → Feb 2014 **Business management** – Hunter College
business-process-management, business-intelligence, business-objects

Jul 2005 → Apr 2009 **Computer Science** – State University Of New York Empire State College
blockchain, artificial-intelligence

I took part in ACM competition in world final and won bronze medal.
