Hello

With over 8 years of experience architecting and delivering high-performance, scalable web applications for industry leaders like Deloitte and General Motors, I am excited to submit my application for your company Job position. My background combines deep expertise in the MERN stack with a proven track record of leading complex cloud migrations and mentoring engineering teams to deliver impactful, user-focused digital experiences.

In my last role at **Deloitte**, I architected a cloud-native e-commerce platform within a microservices architecture, significantly improving modularity and deployment independence. I have a strong focus on performance; at Deloitte, I implemented Next.js SSR/SSG and intelligent caching strategies that optimized Core Web Vitals and SEO performance. Furthermore, I created a centralized API gateway pattern using Redis to improve throughput across distributed services.

During my tenure at **General Motors**, I led the development of a real-time vehicle tracking platform that supported thousands of concurrent users. I engineered data streaming systems using WebSockets and Socket.io to enable instant telemetry updates with low-latency handling. My experience also extends to robust infrastructure management, having leveraged AWS, Terraform, and Kubernetes to automate CI/CD pipelines and standardize environment provisioning.

I am a strong advocate for technical excellence and have consistently led code reviews, authored architectural documentation, and mentored junior engineers on clean code principles and scalable design. I thrive in Agile/Scrum environments and am passionate about aligning technical strategy with business goals to solve real-world problems.

I am eager to bring my technical leadership and full-stack expertise to your company and contribute to your team's continued success. Thank you for your time and consideration.

Sincerely,

Zachary Benson
