

James Brown

7700 Gettysburg Ct, College Station, TX 77845

(702) 602-4648 • smileyjamesbrown@gmail.com • <https://www.linkedin.com/in/james-brown-61625491>

I am a Senior Software Engineer with over 12 years of experience building scalable, user-focused web and platform systems. I specialize in delivering reliable, high-performance products across frontend and backend layers using **React**, **TypeScript**, **Rust**, and **Go**, with a strong emphasis on maintainability, performance, and operational quality.

My background spans collaborative SaaS platforms, real-time communication systems, browser technologies, and digital health startups. I bring a product-driven mindset, close cross-functional collaboration, and a disciplined engineering approach that balances speed of delivery with long-term system health and measurable business impact.

Experience

2024/02 – PRESENT | REMOTE

Senior Software Engineer | FuturHealth | Digital Health Startup

Tech: React, TypeScript, Golang, PostgreSQL, Cloud Infrastructure, CI/CD

- Led development of frontend and backend features supporting patient onboarding, care workflows, and subscription management, contributing to a 34% increase in completed onboarding flows.
- Built and maintained **React** and **TypeScript** interfaces integrated with **Golang APIs**, reducing average page load times by 29% across core user journeys.
- Introduced **React** performance optimizations (code splitting, memoization) that reduced time-to-interactive.
- Strengthened backend observability and logging across **Golang** services, reducing mean time to detect production issues by 33%.
- Designed **PostgreSQL** data models and backend services to improve data integrity and query performance.
- Implemented **CI/CD** pipelines and cloud deployment workflows to improve release reliability.
- Partnered closely with product, clinical, and engineering stakeholders to deliver compliant, scalable features to improving feature adoption rates.

2021/06 – 2024/02 | REMOTE

Senior Software Engineer | Figma | Collaborative Design Platform

Tech: React, Rust, WebAssembly, TypeScript, PostgreSQL, AWS

- Developed full-stack features supporting real-time collaboration using **React**, **TypeScript**, and **Rust** services, improving editor responsiveness by 32% under concurrent usage.
- Integrated **WebAssembly** modules with frontend components to offload performance-critical logic.
- Optimized **Rust** services and **PostgreSQL** queries to support high-volume document interactions, increasing sustained concurrency capacity by 35%.
- Led performance investigations across **React** and **Rust** boundaries, improving real-time synchronizations.
- Contributed to architectural decisions around **state management** and **data synchronization** to support large, shared documents at scale.
- Collaborated with design and product teams to ship user-facing enhancements to increase daily active usage.
- Improved application stability through testing, instrumentation, and performance profiling.

2017/07 – 2021/05 | SAN FRANCISCO

Senior Software Engineer | Discord | Real-Time Communication Platform

Tech: Rust, Go, React, WebSockets, PostgreSQL, Redis

- Built and maintained backend and frontend systems supporting real-time messaging and presence features.
- Developed **Rust** and **Go** services handling high-throughput **WebSocket traffic**, increasing sustained messaging capacity by 44%.
- Integrated **React**-based client features with backend APIs to improve state synchronization.
- Optimized **PostgreSQL** and **Redis** usage to improve read/write performance, lowering peak-time latency.
- Enhanced system observability and operational tooling, reducing average incident resolution time by 25%.
- Partnered with infrastructure teams to improve service resilience and graceful degradation during traffic spikes and partial outages.

2014/06 – 2017/06 | SAN FRANCISCO

Software Engineer | Mozilla | Browser & Platform Engineering

Tech: Rust, C++, JavaScript, React, Web APIs, Python tooling

- Contributed to browser platform development with a focus on performance, security, and standards-compliant **Web APIs**.
- Worked on system-level components using **Rust** and **C++** to improve memory safety, reliability, and long-term maintainability.
- Developed internal tools and user-facing interfaces using **JavaScript** and **React** to support browser features and developer workflows.
- Collaborated with cross-functional teams across rendering and networking to ship core platform functionality.
- Supported build systems, testing, and developer tooling using **Python** to improve engineering efficiency across teams.

Skills

Languages:

Rust, Go, TypeScript, JavaScript, Python, SQL

Frontend:

React, TypeScript, WebAssembly, Next.js

Frontend (React):

React, React Hooks, Flow, Next.js, Component Architecture, Performance Optimization

Backend & APIs:

REST, GraphQL, Node.js, Express, Authentication (OAuth, JWT), WebSockets, Pub/Sub

Cloud & DevOps:

CI/CD pipelines (GitHub Actions, CircleCI), Fastlane, Crashlytics, Sentry, Analytics

Testing:

Jest, React Native Testing Library, Detox, Cypress, Playwright

Education

2011/05 – 2014/05

Bachelor of Computer Science | Central Texas College

3.8 GPA
