

KRISTOBAL RIOS

Senior Full-Stack Engineer

Joshua, TX | (210) 512 5450 | kristobalrios.dev@gmail.com

SUMMARY

- As a software engineer with 8 years of experience, the values I can bring to the team include good software skills and team culture. I continuously seek to improve the performance of project and code quality with insatiable curiosity.
- As a hungry and motivated person, I am always looking forward to the end result of a task without necessarily being concerned about the process I have to undergo to get the task done. It's important that I can thrive in the team environment and can also work independently embracing the teamwork with a positive mindset.
- As a customer-focused engineer, I am always trying to make sure that we are solving the big valuable problems and understand the needs of each and every potential projects.
- As a company member, I always think strategically about the process, considering the long-term technical solutions and balancing technical trade-offs with the business needs.
- As a problem-solver, I always identify and analyze technical problems, and developing effective solutions.

EXPERIENCE

Senior Software Engineer | Databricks

Feb 2022 - Present

As a senior software engineer at Databricks, I had the privilege of collaborating with some of the industry's top engineers, contributing to the development of cutting-edge data processing and machine learning technologies. I played a key role on the data visualization team, enhancing the user experience and expanding the visual capabilities of our platform.

- Spearheaded the development of an application used by millions of customers, handling vast amounts of data.
- Implemented a new visualization type to accurately display large numbers, ensuring continued contracts with fintech clients through increased confidence in the product.
- Designed and integrated new visualization features, including advanced Heatmaps, using React and D3.js to offer more insightful data views for customers.
- Revamped the visualization editor tool to version 2, utilizing React, Ant Design, and TypeScript, resulting in a 25% increase in customer adoption of the visualization tools.
- Optimized development workflows and improved application performance by applying code-splitting and lazy loading techniques, significantly reducing page load times and enhancing application responsiveness.
- Integrated Cypress for end-to-end automation testing, ensuring robust CI/CD pipelines alongside unit and integration tests with React Testing Library for a more reliable user experience.
- Led the migration from REST API to GraphQL, improving data schema efficiency and overall performance with a mix of Python Flask and Java Spring Boot.
- Developed scalable backend solutions using Flask's lightweight, modular architecture, alongside Java-based components, to support diverse use cases.
- Created custom decorators, utilities, and helper functions to streamline common patterns, promoting code reusability across Flask and Java projects.
- Integrated comprehensive monitoring and logging using Stackdriver (now Cloud Operations), enabling proactive performance management and simplifying troubleshooting on GCP.

Senior Software Engineer | Walmart Global Tech

Sep 2020 – Nov 2021

As an Orchestration Layer (OL) Engineer at Walmart Tech, I was responsible for designing, developing, and maintaining the backend systems that support Walmart's e-commerce and retail operations.

- Worked as part of the Transaction-OL team to design and provide the necessary data contracts between systems for the Cart/Checkout pages in Node.js, ensuring seamless data flow.
- Contributed to the development of Spring Boot backend microservices, addressing and fulfilling the data requirements needed by the Orchestration Layer for smooth functionality.

- Developed and wrote GraphQL resolvers and mutations to efficiently supply the required data to the front-end interface.
- Led the implementation of a new feature designed to update pet and vet details for the enhanced new pet experience using Node.js and Express.js, improving user interaction.
- Refactored and optimized the existing codebase to ensure it met Sonar compliance standards and resolved several linting issues across both Node.js and TypeScript.
- Increased the overall test coverage from 97% to a perfect 100% across the entire codebase, utilizing Jest and Cypress for comprehensive test automation.
- Actively participated in customer calls and discussions to ensure that the pet and prescription features were thoroughly production-ready, bug-free, and met customer requirements.

Senior Software Engineer | Boxed

Sep 2019 – Aug 2020

As a Senior Software Engineer at Boxed, I focused on developing and maintaining scalable software solutions for clients across healthcare, e-commerce, real estate, and fintech sectors. I was responsible for building reliable backend systems, optimizing performance, and leading migrations to modern technologies, ensuring seamless and efficient software for a growing user base.

- Consistently produced reliable, maintainable, and thoroughly tested code for clients across healthcare, e-commerce, real estate, and fintech sectors using Java, Spring Boot, and Angular frameworks, ensuring high-quality software that aligns with business needs.
- Spearheaded the successful transition from Java 8 to Java 11, utilizing new features and enhancements to improve application performance, security, and maintainability.
- Worked with a broad spectrum of databases, both NoSQL and relational. Focused on Hibernate with PostgreSQL for thorough data management and employed AWS DynamoDB for rapid and flexible data operations.
- Designed and administered a resilient AWS infrastructure (including EC2, S3, RDS, Lambda) that ensured high availability and fault tolerance for key business applications, while implementing robust monitoring and security measures.
- Optimized API performance through Redis caching, leading to significant improvements in responsiveness and efficiency.
- Developed a modular microservices architecture with Spring Boot, deploying it on Kubernetes to facilitate independent scalability and seamless integration of new services.
- Utilized Kubernetes on AWS EKS (Elastic Kubernetes Service) to containerize microservices, ensuring smooth orchestration, scalability, and fault tolerance for the application environment.
- Applied GraphQL to create high-performance and flexible APIs in Java and Python projects, boosting frontend efficiency and enhancing the developer experience.
- Automated scheduled processes with Spring Batch for cron-jobs, enabling streamlined data retrieval and analysis from third-party APIs, improving data processing and system efficiency.
- Built and delivered single-page web applications using Angular/TypeScript and Material UI, harnessing their strengths to create responsive, engaging, and visually appealing interfaces.
- Conducted in-depth code reviews, providing actionable feedback and ensuring compliance with coding standards for enhanced code quality and maintainability.

Software Engineer | Pottery Barn

Aug 2017 – Jun 2019

As a Software Engineer at Pottery Barn, I developed and maintained web applications using technologies like Java, Spring Boot, React, and Angular. I focused on optimizing user experience, improving system performance, and integrating APIs to ensure smooth functionality across the platform.

- Developed and maintained multiple web applications using technologies such as Java, Spring Boot, Hibernate, Node.js, Ruby on Rails, React, Angular, HTML, CSS, and JavaScript.
- Enhanced user interactions and minimized page load times by incorporating AJAX and jQuery features.
- Collaborated with teams to improve functionality and resolve issues in Spring Boot and Angular-based applications.
- Integrated RESTful and external third-party APIs, including payment gateways, to ensure smooth and secure transaction processing.
- Performed thorough cross-browser compatibility testing to guarantee a consistent user experience across various platforms.
- Improved system performance and alleviated backend load by implementing efficient API caching with Redis.

- Converted design mockups, including wireframes and PSD files, into responsive and interactive code using Java and relevant frameworks.
- Developed robust test suites with JUnit, Mockito, and Selenium to ensure functionality and maintain high application reliability.

Education

Bachelor of Computer Science | Texas Christian University

2013 - 2017

SKILLS

- **Backend**

Java, Python, Node.js, Ruby, Spring Boot, Spring Framework, JPA, Microservices, , Kafka, RabbitMQ, GraphQL, OAuth, JWT, Maven/Gradle, WebScket, gRPC, RESTful API, GraphQL

- **Frontend**

HTML, CSS, JavaScript/TypeScript, jQuery, React/Next, Redux, Angular/Angular.js, RxJS, JSP

- **Database**

MySQL, PostgreSQL, Oracle, MongoDB, Redis, AWS RDS, DynamoDB, GCP CloudSQL, ElasticSearch/OpenSearch

- **Testing & Tools**

JUnit, Mockito, Jasmine, Cucumber, Selenium, Jest, Cypress, TDD, DDD

- **Cloud**

AWS(Lambda, EC2, S3, Cognito, API Gateway, DynamoDB, RDS, SQS, SNS, Terraform, ECS, EKS, Fargate, API Gateway, VPC, etc), GCP(Akamai, Apigee, CloudSQL, GKE, Secret Manger, BigQuery, Cloud Functions, Cloud Pub/Sub, GKE, etc), Heroku, etc

- **Other**

Agile, Confluence, Git, GitLab, Github, Bitbucket, Docker, Kubernetes, Bamboo, Jenkins, CircleCI, Grafana, Datadog, Sentry, Jira, ArgoCD, Swagger, OpenAPI, Postman, TDD, BDD
