Experience

SENIOR SOFTWARE ENGINEER | NIKE | JUL 2019 - PRESENT

[Java, Node.js, Express, MongoDB, SQL, JUnit, GreenPepper, SOAP, REST/JSON, Axis 2, Agile, Test Driven Development (TDD), Feature Driven Development (FDD), Web Services, Server-side Architecture, Encryption Algorithms, Authentication Protocols, Database Schema Design, Data Caching, Performance Monitoring]

- Crafted key features for a Natural Language Processing application using Java, enhancing search capabilities across structured data (SQL Databases).
- Applied Test Driven Development (TDD) with JUnit and Feature Driven Development (FDD) with GreenPepper, resulting in a 30% reduction in defects.
- Integrated a Web Services Layer (SOAP & REST/JSON) using Axis 2 into the existing Genius Room product, improving system interoperability and data exchange efficiency.
- Pioneered the design of server-side architecture, creating scalable systems for large-scale data processing, which increased data handling capacity by 50%.
- Estimated, executed, and validated new features, while maintaining and optimizing existing functionality, resulting in a 25% increase in system reliability.
- Created server scripts and RESTful APIs with Node.js, Express, and MongoDB, enabling seamless communication between front-end and back-end systems.
- Collaborated closely with front-end engineers and UX designers, delivering well-documented APIs and clear data structures, which accelerated the development process by 20% and ensured a cohesive user experience.
- Implemented advanced security measures, including encryption algorithms and authentication protocols, safeguarding sensitive data and reducing security incidents by 40%.
- Optimized server configurations, enhancing application performance and response time by 40%.
- Established reusable code libraries and best practices, reducing development time for future projects by 30%.
- Conducted regular performance monitoring and troubleshooting, ensuring smooth application operation and reducing server downtime by 20%.

SENIOR SOFTWARE ENGINEER | OKTA | DEC 2016 – FEB 2019

[Java, JSE 6, Maven 3.x, ANT, RESTful Web Services, JSON, Jenkins, DevOps, CI/CD, Agile, Cloud-native Architecture, The Twelve-Factor App, Mobile Development (iOS - iPad/iPhone)]

- Engineered a system of reports on insurance transactions for clients, enabling detailed statistics on completed transactions.
- Orchestrated a streamlined onboarding process for 20 customers migrating to cloud-native infrastructure, resulting in a 40% decrease in migration time and ensuring seamless integration with existing systems.
- Championed the integration of performance monitoring tools to analyze system behavior, identifying and resolving bottlenecks that boosted throughput by 30% without compromising service quality.

- Authored automated scripts to detect bad workflows, identifying 40+ inefficient processes.
- Transformed low-performance workflows, optimizing them by 29% and utilizing DevOps, agile principles, and Jenkins to enable CI/CD, which decreased production time by 40%.
- Handled 20+ critical operational tasks and on-demand support requests from tenant applications.
- Architected a custom login mechanism (JSE 6) for web and desktop clients utilizing a shared database realm across two different user stories.
- Converted an ANT build system containing ~40 build.xml files to Maven 3.x with ~10 pom.xml files.
- Deployed a mobile solution for iPad/iPhone by repurposing functionality from the Workforce Management Product using RESTful web services and JSON, which increased mobile user engagement by 40%.

WEB DEVELOPMENT INTERN | PETDOORS | SEP 2013 - NOV 2016

[JavaScript, TypeScript, React, GraphQL, Apollo, Node.js, TypeORM, Unit Testing, MySQL, MongoDB, Redis, Microservices Architecture, Apache Kafka, Event Sourcing, Database Backup/Restore, Docker, Configuration Management, GitHub]

- Assisted the team in making key architectural decisions and efficiently resolving defects, which contributed to a 15% improvement in project delivery timelines.
- Supported software builds and deployment processes, ensuring timely releases and clear communication with stakeholders, which helped reduce deployment-related issues by 20%.
- Provided technical assistance to maintain smooth software operations, resulting in a 25% decrease in system downtime through proactive performance and reliability management.
- Documented code and technical design solutions, enhancing knowledge sharing and maintaining consistency across projects.
- Collaborated with senior developers to develop and test new features, gaining hands-on experience in full-stack development and modern web technologies.

Education

BACHELOR OF SCIENCE IN COMPUTER SCIENCE | JUNE 2009 - JUNE 2013 | UNIVERSITY OF NORTH FLORIDA

Skills & Abilities

- **Languages:** Java (J2SE/J2EE, JEE), Groovy, JavaScript/TypeScript, Python, JDBC, XML, JSP/Servlets, JSON, HTML/CSS, SQL, T-SQL, YAML
- **Databases:** Oracle (8.x, 9.x, 10g, 11g), MySQL, PostgreSQL, Neo4j, Redis, Elasticsearch, MongoDB
- **Tools:** Spring, Hibernate, AspectJ, Struts/Tiles, Axis2, Junit, ANT, Maven 1.x, 2.x, 3.x, IntelliJ Idea, RUP, NetBeans, Eclipse, DWR (Direct Web Remoting), CVS, SVN, ClearCase, Git
- **Web Technologies:** React, Next, React Native, Angular, Nodejs, Express, Nestjs, Django, Flask, Celery, NumPy, Pandas, Tensorflow, Mocha/Chai, Apollo, GraphQL, gRPC
- **Infrastructure Management:** Docker, Kubernetes, GitHub Actions, Jenkins, Terraform, Ansible, Serverless, AWS EC2, Lambda, RDS, DynamoDB, Kinesis, Azure Functions, CosmosDB
