Profile

Founded in 2010, KH.co.ltd is a leader in innovative software development, creating world-class solutions for a wide range of industries. With a dynamic team of experts, including a visionary CEO, an experienced CTO, and talented senior and junior developers, we consistently deliver exceptional results that drive the growth and success of companies worldwide. Over the past decade, we've been fortunate to work with both startups and Fortune 500 companies, delivering customized solutions in blockchain, healthcare, e-commerce, and other fields. Our experience spans web and mobile app development, project management, strategic marketing, and sales maximization, achieved through unrivaled leadership and engagement skills. In mobile development, we're proud to have released over 100 mobile games and successfully launched over 10 online games. We've also developed cutting-edge hospitality applications and asset management solutions using cutting-edge technologies such as RFID and NFC, enabling real-time data tracking and streamlining operations. We also develop websites in PHP and continually update e-commerce platforms, CMS, and CRM, providing companies with a competitive advantage through modern, reliable, and user-friendly web solutions. Our desktop application development expertise includes creating a variety of apps tailored to the specific needs of our clients. From custom software solutions to productivity-critical tools, we've created numerous applications that stand out in both functionality and design. Furthermore, our game development expertise includes using industry-standard tools such as Cocos and Unity to create engaging and interactive games that captivate users. We're more than just a technology company; we're a trusted partner who values long-term relationships with our clients. Our agile development processes and innovative problem-solving methods allow us to quickly and efficiently create high-quality products. Our team's deep knowledge and experience enable us to offer strategic solutions and recommendations, helping our clients confidently navigate the rapidly changing technology landscape. Our blockchain and AI-powered platforms have transformed industries, and our mobile apps continue to lead e-commerce innovation. From web platforms and chatbots to video processing, desktop applications, and game development, our solutions are designed with scalability, flexibility, and long-term impact in mind. Our IT infrastructure is designed for optimal efficiency, enabling us to launch and support projects that not only meet but exceed expectations. With over a decade of experience, our commitment to problem-solving, attention to detail, and collaboration, we are a trusted partner for any development team. At KH.co.ltd, we don't just build products—we create transformative experiences that help companies grow, innovate, and lead in the ever-changing digital world. Our passion for cutting-edge technology drives us to push the boundaries of what's possible, and we look to the future with optimism. Let's continue to push the boundaries of innovation, project after project.

Blockchain & Full Stack Engineering Team

Team Leader, 1

Members, 5

Tech Stack

Frontend: HTML, CSS3, Tailwind CSS, Styled-components, Material-UI, Shadcn Lib, React.js, Next.js, React-Native, v0.dev Backend: Node.js, Rust, PHP, Express.js, Axum, Laravel Database: MySQL, MongoDB, PostgreSQL, GraphQL, Supabase, Firebase Blockchain: Solidity, Foundry, NFT Web3: Viem, Wagmi, Privy, Thirdweb, RainbowKit, Envio, Alchemy RPC DevOps & Tools: Docker, Git, CI/CD, Bitbucket, AWS, Azure, Digital Ocean Project Management: Jira, Linear, Trello

Mobile & Python Team

Team Leader, 1

Members, 5

Tech Stack

Python: Flask, Django Golang: Gin, Echo, Beego, Buffalo Database: MySQL, MongoDB, PostgreSQL, GraphQL, Supabase, Firebase Python Skills: GPT Integration LLM Web Scraping (BeautifulSoup, Scrapy) Data Science (Pandas, NumPy, SciPy, Matplotlib) AI Engineering (TensorFlow, Keras, PyTorch, Scikit-learn) Mobile Development: React Native Flutter Swift, Kotlin, Java (for native iOS/Android apps) Firebase for mobile backend Expo DevOps & Tools: Docker, Git, CI/CD, Bitbucket, AWS, Azure, Digital Ocean Project Management: Jira, Linear, Trello

1C & Microsoft Tech & PHP Team

Team leader, 1

Members, 3

Tech Stack

PHP: Laravel Symphony CI Yii Desktop Development: MAUI Windows UI Windows Forms WPF PyQT Game Development: Unity Cocos Web: ASP.NET Web API ASP.NET MVC

Professional Experience

Full Stack Engineering, <i>Ageny Voice First LLC At Voice First LLC</i> the team has worked with leading blockchain music platforms (Sonata, SyncStream, and others) and musicians such as Megan Thee Stallion, Heno, and Xcelencia. • Recoup: AI tools and technologies for the music industry. • In Process: Blockchain-powered collaborative timeline for artists. • Data Muse: Second place at the ETH Denver 2024 hackathon in the Base (consumer product), Arbitrum (NFT), and XMTP (frames) categories. • Capsules: Winner of the Onchain Summer Buildathon, launching blockchain playlists using token-linked accounts. • MESA: Developed a blockchain-based rights management tool for musicians, simplifying version control, contributor contracts, and smart contract integration. • Fam: Developed a blockchain-based platform for music community funding and collaboration. • Participated in various projects at Session and Rxd-Co, leveraging a range of technologies including AI, AWS, Hubspot, Supabase, Firebase, and the MERN stack, adapting to the ever-changing technological landscape.	2023 – Present Remote
Full Stack Engineering Agency React & Rust, <i>Vinovest</i> • Joined an established development team that was expanding to build additional features and improve existing platforms. • Led the frontend development of the new Whiskey Investment Platform, adhering to established programming standards and best practices, and collaborating with backend developers and product managers. • Developed scalable backend solutions in Rust, implemented memory-safe concurrent programming patterns, and optimized API response times through efficient data structures and async/await patterns.	2018 – 2021 Remote

- Developed and optimized PostgreSQL database schemas, implementing complex queries using efficient indexing strategies and stored procedures to handle large transaction volumes and data analytics.
- Developed and implemented a client and buyer appointment scheduling application using Google Cloud Functions, streamlining communication processes and increasing operational efficiency.
- Developed adaptive user interfaces and interactive features for the investment platform, improving user experience and platform adoption.
- Collaborated with cross-functional teams to define and implement technology roadmaps, resulting in significant improvements in team efficiency and project success.

Blockchain Engineering Agency, Defient Co

2023 – 2024
Remote

- Developed and maintained three large web applications: cre8ors.com, reserve.cre8ors.com, and everythingcorp.cre8ors.com, improving user experience and increasing engagement.
- Participated in the development of Cre8ors NFTs, leveraging the Zora protocol to create a unique NFT marketplace.
- Integrated Web3 features using Rainbowkit, Viem, Ethers.js, and the Alchemy API, simplifying user interaction with the blockchain.
- Used tools such as Git for version control, WebPack for building modules, and configured JIRA for project tracking and Jenkins for continuous integration and deployment.
- Led development using test-driven development (TDD) methods and testing frameworks such as Jasmine and Karma, ensuring high code quality and robust testing.
- Actively participated in Agile Scrum processes, collaborating with team members to iteratively improve and effectively prioritize tasks.

Full Stack Engineering Agency | React & Rust, Tepe Oral Hygiene Products

2021 – 2023
Remote

- Developing scalable front-end solutions using the MVC model, implementing a component-based architecture with numerous reusable components, and optimizing package size through code-splitting strategies.
- Designing and implementing agile development processes, implementing Scrum/ Kanban workflows with comprehensive Jira project tracking and Confluence documentation standards.
- Optimizing application performance through advanced Babel configurations, implementing tree-shaking methods, and containerizing applications with Docker for efficient deployment and significantly reducing package bootstrap time.
- Leading the comprehensive development of a comprehensive administrative system, creating a responsive React SPA in TypeScript, developing a high-performance GraphQL API using Rust and the Axum framework, and implementing a Redis caching layer for efficient data processing and session management.
- Developing and implementing automated testing strategies using Jest and the React Testing Library, which enabled high code coverage and a significant reduction in bugs during development.
- Collaborated with product managers and designers to translate business requirements into technical specifications and implement numerous feature enhancements within tight deadlines.

- Mentored junior developers through code reviews and pair programming sessions, establishing coding standards and best practices, significantly increasing team productivity.
- Integrated third-party APIs and payment gateways, implementing secure authentication processes and data encryption protocols to ensure compliance with industry standards.

1C Tech Agency, GlobalTech ERP Solutions

04/2022 – 06/2023
Saint Peterburg, Russia

- Developed and implemented specialized modules for 1C:ERP, covering production planning and cost accounting.
- Integration of 1C with SAP CRM and external logistics systems reduced manual data entry by 60%.
- Conducted system audits and performance optimization for clients with more than 500 concurrent users.
- Led a team of 4 engineers, mentored junior developers, and implemented programming standards.
- Developed automated solutions for preparing tax reports in accordance with Russian legislation.

1C Tech Agency, BizSoft Group

01/2020 – 01/2022
Moscow, Russia

- The 1C:Trade Management solution has been adapted for wholesale and retail clients.
- Advanced reporting tools have been developed using the data composition system.
- Synchronization of 1C with online marketplaces (Ozon, Wildberries) has been implemented.
- Support was provided for migration from 1C 8.2 to 8.3 with minimal downtime.
- End users were trained and documentation was provided.

Microsoft Tech Agency | PHP, RedWerk

2022 – 2024
Remote

- Provided AWS provisioning for servers and database instances using EC2.
- Provided continuous integration, continuous deployment, and test suite implementation.
- Developed the frontend using Vue.js and the backend API using Laravel.
- Optimized the performance and scalability of broadcast events by routing tasks to Redis queue workers. Identified and resolved bottlenecks.
- Studied the feasibility and available options for experimental features and provided evaluations.
- Integrated third-party libraries, such as Twilio, AWS, and other technologies, under a non-disclosure agreement.

Microsoft Tech Agency | PHP, Spending Power

2024 – 2025
Remote

- Development and support of high-load web projects and online stores for key regional clients, ensuring cross-browser compatibility and responsive design.
- Integration of external APIs, CRM systems, and payment gateways to improve functionality and optimize business processes.
- Implementation of microservices architecture and optimization of database queries to improve application performance.
- Collaboration with cross-functional teams to discuss technical requirements and implement projects from concept to launch.
- Using Docker and Gitlab CI/CD pipelines to automate deployment and ensure smooth workflows.

- Conducting code reviews and providing constructive feedback to improve code quality and maintainability.
- Applying OOP principles and SOLID design patterns to develop reliable and scalable applications.
- Working with modern frameworks such as Laravel and React to create dynamic and interactive user interfaces.
- Participating in architecture discussions and implementing caching mechanisms to improve system efficiency.
- Support and maintenance of existing projects, ensuring stability and security in the production environment.

Microsoft Tech Agency, Unity Moba Game

2019 – 2022

Remote

- Client-side Development: Using Unity and C# to create a responsive and engaging mobile game interface with optimized performance across various devices.
- Server-side Development: Backend development in C++, ensuring high scalability and efficient real-time client-server interaction.
- Multiplayer: Implementing real-time multiplayer features, ensuring seamless synchronization, matchmaking, and player interaction.
- Game Logic and UI: Developing game mechanics, integrated animation, and creating an intuitive UI/UX to create an engaging user experience.
- Optimization and Performance: Focusing on optimizing resource usage to ensure a smooth gameplay experience, especially in resource-constrained mobile environments.

Microsoft Tech Agency, Cocos Card Game

2018 – 2019

Remote

- Developed a card game using Cocos2D and C++ in Visual Studio 2013, focusing on optimizing performance and gameplay interactivity. Integrated Spine for 2D skeletal animation, enhancing the visual appeal and fluidity of character and card animation.
- Game Development: Used Cocos2D and C++ to design and implement game mechanics, ensuring a smooth and responsive user interface.
- Animation Integration: Integrated Spine for advanced 2D skeletal animation, enhancing the game's visual quality and character dynamics.
- Performance Optimization: Focused on optimizing rendering and gameplay performance to ensure the game runs efficiently across multiple platforms.
- UI/UX Design: Developed user-friendly interfaces, making the game intuitive and engaging.
- Debugging and Testing: Used Visual Studio 2013 for debugging and testing, ensuring the stability and functionality of all game features.

Mobile & Python Team | React Native & Flask, BQS, Assets Tracking System

2022 – 2025

Remote

- Developed a card game using Cocos2d and C++ in Visual Studio 2013, focusing on optimizing performance and gameplay interactivity. Integrated Spine for 2D skeletal animation, enhancing the visual appeal and fluidity of character and card animation.
- Game Development: Used Cocos2d and C++ to design and implement game mechanics, ensuring a smooth and responsive user interface.
- Animation Integration: Integrated Spine for advanced 2D skeletal animation, enhancing the game's visual quality and character dynamics.
- Performance Optimization: Focused on optimizing rendering and gameplay performance to ensure the game runs efficiently across multiple platforms.
- UI/UX Design: Developed user-friendly interfaces, making the game intuitive and engaging.

- Debugging and Testing: Used Visual Studio 2013 for debugging and testing, ensuring the stability and functionality of all game features. Joined a highly skilled development team to expand the capabilities of the existing mobile asset tracking system, adding new features, and improving performance.
- Led the development of the mobile app's frontend interface using React Native, adhering to best practices and team programming standards, collaborating with backend developers and product managers to improve the user experience and optimize asset tracking processes.
- Developed backend services using Flask and MySQL, implementing robust API endpoints for asset data processing and user authentication, ensuring seamless data exchange between the mobile app and the server.
- Optimized asset tracking performance by implementing RFID and NFC technologies, ensuring seamless automatic asset identification and login with minimal latency, significantly improving user experience and operational efficiency.
- Developed and optimized the backend database schema in MySQL, developing complex queries and using indexing and stored procedures to support the tracking of large volumes of assets and ensure rapid response to real-time updates.
- Developed real-time tracking features using RFID and NFC data logging to automatically record asset movements, providing users with a dynamic and up-to-date view of their assets.
- Optimized user authentication by developing NFC-based login, enhancing security and simplifying the process of authorized users accessing the platform.
- Collaborated with cross-functional teams to clarify the project scope and requirements, resulting in the development of a highly scalable asset tracking solution that improved business operations and asset management for clients.
- Contributed to the overall success of the project by optimizing the system's scalability and ensuring its easy adaptation to future requirements or industry needs.

Mobile & Python Team | Android & Django, BQS, eCommerce Platform

2024 – 2025

Remote

- Joined a dynamic team developing a multi-functional e-commerce platform with a user-friendly mobile interface built on React Native, which increases user engagement and provides a modern, intuitive shopping experience.
- Led the development of the frontend platform, designing and implementing responsive user interfaces to provide users with a convenient and engaging shopping experience on iOS and Android devices. Worked closely with product managers and designers to ensure the platform's UI/UX aligned with business goals and customer needs.
- Developed a powerful backend system using Django, implementing robust RESTful APIs for managing product catalogs, user accounts, orders, and payment processing. Leveraged Django's scalability and security features to ensure high performance and data integrity under heavy traffic.
- Integrated AI-based features into the platform to enhance the user experience, recommending featured orders based on user behavior and preferences. Leveraged machine learning algorithms to analyze past purchasing patterns, improve personalized recommendations, and enhance customer satisfaction.
- Optimized database structure and queries ensure fast search times and a seamless user experience, using PostgreSQL for scalable data storage and efficient indexing of products and orders.

- Collaborated with backend engineers to implement secure, real-time mobile app-server synchronization, allowing users to track orders and receive instant notifications about promotions and in-stock availability.
- Enhanced customer engagement by integrating an AI-powered search feature, allowing users to quickly find and reorder favorite products based on purchase history, improving platform usability and customer retention.
- Collaborating with cross-functional teams to implement a comprehensive technology roadmap resulted in improved platform performance, user retention, and overall operational efficiency.
