+1 718 213 4799

I'm a senior software engineer.

I am an organized, collaborative and highly skilled full stack developer with 8+ years of professional experience in dynamic and deadline-driven work environments.

Self-motivated and self-taught professional who likes to solve difficult problem, creative & open-mind.

Work Experience

Lead developer

SynesisOne - San Francisco, CA

September 2021 to April 2022

Blockchain Data yield farming & staking platform

Web(company): <https://synesis.one>

Tech-stack: Web (React.js / Typescript + Smart Contracts / Rust / Solana)

What I do:

As a lead developer, I developed data yield farming smart contract using Rust on Solana network especially focusing on code & storage optimizing.

And also developed NFTs marketplace smart contract using Rust substrate.

And I developed frontend using React.js / Typescript and integrate phantom wallet for Solana network integration.

And I also integrated Rust based Solana smart contract into frontend which includes data yield farming logic.

Full-stack developer

InsureDAO - Singapore

July 2021 to August 2021

Blockchain Ecosystem Insurance Service Platform

Web(company): <https://insuredao.fi/>

Github: <https://github.com/kevinchristopherou/InsurancePlatform>

Tech-stack: Web (React.js / Typescript + Web3.js + Smart Contracts / Solidity / Hardhat)

What I do:

As a full stack developer, I developed AMM especially token convert part integrating Uniswap v3.

And also upgraded the market price calculation part using creative solution to improve solidity float number calculation correctness.

And developed Python tracking application to track platform user's activity via twitter and etherscan APIs.

Lead developer

RociFI - Massachusetts

December 2018 to June 2021

Crypto Currency Lending Platform based on Score management system using NFT and Oracle

Github: <https://github.com/kevinchristopherou/LendingPlatform>

Tech-stack: Web (React.js / Typescript + Web3.js + Smart Contracts / Solidity / Hardhat + Oracle)

What I do:

As a lead developer, I designed the Roci FI lending platform architecture and smart contract architecture from scratch focused on security and optimization.

I suggested to use Proxy and Storage logic for smart contract security improvement and integrated openzeppelin to smart contract for security logic myself.

I also took part in smart contract development with contract developers for lending platform contract and developed NFT based User wallet score generate off-chain application using Oracle myself and integrate this into lending platform.

Lead developer

MAXOS LLC - Boston, MA

September 2017 to December 2020

Accelerating investor engagement yield farming DApp

Company: MAXOS LLC (Boston, United States)

Github: <https://github.com/kevinchristopherou/CoinExchangePlatform>

Tech-stack: Web (React.js / Redux-Saga + Web3.js + Smart Contracts / Solidity / Hardhat)

What I do:

As a lead developer, I planned the smart contracts structure with separated contracts and Escrow contracts for security and audit and developed mainly part in smart contracts using Hardhat environment in Solidity.

And integrate contracts into FE using Web3.js and Metamask connection into React.js based project.

Project manager

Kamermans Holding - Oranjestad

April 2016 to December 2020

Decentralized Exchange Platform where companies registered in the Caribbean can list ERC-20 tokens.

Web: <https://calahex.com>

Tech-stack: Web-CeFi (React.js / Redux-Thunk + Laravel), Web-DeFi (React.js + Web3.js + Smart Contracts)

What I do:

As a PM, I have designed architecture & DB & UI/UX from scratch with my last experience above myself.

I have also suggested and implemented AI based financial solutions to avoid risk from high-changing price of cryptocurrency pairs.

And I have developed smart contracts for ERC-20 tokens exchange and management.

I recommended my team members (talented & well-experienced developers) on this project and lead them as a PM to archive completion of CALAHEX v1.0

Engine developer

Vader - New York, NY

July 2017 to October 2018

Liquidity protocol that combines a collateralized stablecoin with liquidity pools

Web: <https://vader-dapp.vercel.app/>

Github: https://github.com/kevinchristopherou/Vader_Protocol_Solidity

Tech-stack: Smart Contracts / Solidity / Hardhat

What I do:

As a smart contract developer, I developed Pools and Synth for ERC20 protocol smart contracts using Solidity on Hardhat.

And make testcase using Jest for smart contracts developed myself and others.

As a problem solver, I solved plenty of issues on security side and gas optimization on contract relationship and code quality.

Project manager

Africunia Bank - New York, NY

June 2015 to February 2016

AFCASH Banking platform using cryptocurrencies and ERC-20 & TRC-20 tokens

Web: <https://www.excoincial.co>

Mobile(Android):

<https://play.google.com/store/apps/details?id=com.africunia.afcashwallet&hl=en>

Github:

<https://github.com/kevinchristopherou/CoinExchangePlatform>

Tech-stack: Web (Vue.js / Vuex + Ruby on Rails + Smart Contracts + Web3.js), Mobile (React Native)

What I do:

As a PM, I have upgraded entire ongoing banking platform v1.0 into v2.0.

New features of version 2.0 are integrate ERC-20 & TRC-20 tokens with smart contract using solidity into ongoing platform (only use BTC, BCH before) and upgrade frontend into Vue.js integrating smart contract using web3.js.

I provide solution to improve UI/UX design to let newly users can realize and use our platform much more easier by implement AI based high profit experienced client mirroring function.

And make trading UI much simpler than v1.0

Full-stack developer

Nano

October 2014 to February 2016

Direct acyclic graphs (DAG) to settle transactions across the network

Web: <https://nano.org/>

Github: https://github.com/kevinchristopherou/Nano_cryptocurrency_network

Tech-stack: Node / C++, Server / Rust

What I do:

As a Node developer, I developed transaction based network protocol and DAG ledger using C++.

And as a Server developer, I developed the backend for network server using Rust for user admin and transaction history, network security part.

Lead developer

Designhubz - California

February 2014 to February 2015

AR & 3D model product based eCommerce store

Web:

<https://designhubz.com>

Tech-stack: Web (Wordpress + Three.js + Unity)

What I do:

As a lead developer, I developed VR based UI for each 3D products using Three.js with the function - zoom, move, rotates and make able to change 3D product color not only entire product but also partial color as clients want.

And also developed Unity engine for AR based 3D product management.

Education

Bachelor's of Engineering in Information Systems Technology and Design

Singapore University of Technology and Design - Singapore

April 2011 to August 2015

Skills

- blockchain
- artificial intelligence
- web frontend
- web backend
- mobile
