

Daniel Scott

Golang Developer

📍 Edgewood, KY, USA

Education

Bachelor's / Computing in Data Analytics,

National University of Singapore (NUS)

08/2015 – 07/2016 | Singapore, Singapore

- Machine Learning
- Data Mining
- Big Data Analytics

Bachelor's / Computer Science,

HongKong Polytechnic University

09/2012 – 07/2015 | Hong Kong, Hong Kong

- Introduction to Computer Science
- Data Structures and Algorithms
- Programming Fundamentals
- Computer Organization and Architecture
- Operating Systems
- Database Systems
- Software Engineering
- Artificial Intelligence
- Computer Networks
- Web Programming

Profile

Delivered effective production to 10+ companies, from startups to Fortune 500s, with a focus on Blockchain, Healthcare, Ecommerce and etc & Web/Mobile project management and development for maximizing marketing strategy, branding and sales - all executed via exemplary leadership and engagement skills.

Professional Experience

Senior Golang Developer | Blockchain, Venuelog

02/2022 – 08/2025

Sydney, New South Wales, Australia

- Took part in the development of 3+ internal services of VenueLog Network - a ETH staking protocol by building RESTful APIs in Go using some famous web framework & microframeworks like Echo and Gin-Gonic.
- Improved the functionality and scalability of existing services by updating those based on HTTP1 to HTTP2, using gRPC, RPC and by adding load-balancing functionalities and solving high-traffic issues.
- Handled data management in Go using some packages like s3 package for AWS S3 bucket, mongo-driver for MongoDB and pq, sql or GORM package for SQL Databases.
- Developed the smart contracts for swETH token (company token) based on ERC20 and swNFT token (NFT token) based on ERC721 and I deployed into 3 different networks and connected contracts using Infura and Alchemy node.
- Developed the smart contract of each platform using Ethereum ERC20, ERC1155 (Solidity) mainly focused on code & storage optimization for less gas fee.
- Mentored 2 frontend team members for core pages development such as Staking & Swap.
- Integrated Large Language Models (LLMs) into internal tooling by developing a Go-based microservice that communicates with hosted LLM APIs (OpenAI/Ollama) via REST and gRPC. This service enabled prompt-based automation, semantic search, and developer productivity enhancements. Used Langchain for chaining prompts and embedding workflows, and connected it with vector databases like Qdrant for retrieval-augmented generation (RAG).

Skills

Go

Gin/Echo/Beego

Python

Flask/Django

Blockchain

Solidity/Rust

React

Next.js

Typescript/Javascript

CSS Frameworks

Shadcn/TailwindCSS/Material-UI

ORM & Database Tools

GORM/SQLAlchemy/Sequelize

DevOps & Infrastructure

Docker/Kubernetes/AWS S3

Database Architecture

MongoDB/MySQL/PostgreSQL

Backend Engineer, *Pulsepoint*

02/2018 – 12/2021 | Nouméa, New Caledonia

- Took part in the development of 10+ web and mobile applications such as Sharecells, Scanassets, Scanandgo, Trackmylinen and etc.
- Built backend part of the 70% of mobile apps by building Martini and Gin-Gonic in Go and RESTful APIs using FastAPI in Python, Node.js.
- Completed development of 2+ portal sites and 3+ platform sites using MERN stack and Beego framework in Go.
- Fabricated a streamlining platform and constructed its backend using event-driven microservices architecture in Go.
- Led 4 members to gather the requirements from clients and developed perfect backend RESTful APIs/mobile application to make them to be satisfied.

Golang Full Stack Developer, *Swaggie*

02/2015 – 12/2017 | Canberra, Australia

- Experienced in using Go technologies on LINUX & Windows platform together.
- Using Go, developed a microservice for reading large volume of data (millions) from MySQL database.
- Participated in the development of 20+ HTTP RESTful Web services and SOAP APIs in Golang.
- Implemented the design patterns, Multithreading and Go containers and used channels and goroutines.
- Containerized applications using Docker: Created docker files, built docker images for microservices to run on Kubernetes platform.
- Developed the optimized and reusable 10+ Core UI libraries using React.js on FE side.

Junior Golang Developer, *Eurobank*

03/2014 – 12/2014 | Nicosia, Cyprus

- Took part in the development of maintaining and upgrading 15+ backend APIs of internal web/mobile services and created new services with Golang.
- Separated the database into 20+ tables and generated optimized SQL queries to fetch necessary data.
- Experienced requirement analysis, design, coding and unit testing and Wrote prototype on Golang to improve scalability and functionality of project.
