IT, System Integration, Internet

- Internet Service Provider
- Internet Company (Search Engines, Payment Systems, Social Networks, Information and Educational, Entertainment Resources, Website Promotion etc.)

Lead .NET Developer

- Designed and built an innovative web platform for analyzing soccer matches using ASP.NET Web Forms, C#, VB.NET, and JavaScript, with FFmpeg integration for advanced video processing.
- Efficiently processed large volumes of XML data, leveraging MS SQL Server for optimized partial data representation to enhance performance and scalability.
- Delivered a robust, user-friendly system that streamlined match analysis, enabling real-time insights for users.

Construction, Real Estate, Architecture

- Commercial Property Construction (Retail Spaces, Office Buildings)
- Industrial Construction
- Real Estate Management and Use
- Development

Lead NET Developer

- Designed and developed a robust web application, crafting an intuitive frontend using Angular, HTML, CSS, JavaScript, and jQuery for a seamless user experience.
- Implemented a real-time chat server using the MVVM pattern, enhancing user engagement with dynamic communication features.
- Leveraged Twilio and SMTP NuGet packages for client notifications and Syncfusion UI with

LinqToExcel for streamlined document printing.

- On the backend, architected a scalable system using a code-first approach with Entity Framework 6.0, Firebase, and MS SQL Server for efficient database management.
- Applied the repository pattern, CQRS, MediatR, and Domain-Driven Design (DDD) principles, utilizing LINQ for optimized data queries. Structured the backend into three logical microservices layers to enhance usability and maintainability.
- Integrated Stripe API for secure payment processing, ensuring smooth financial transactions.
- Followed a disciplined Software Development Life Cycle (SDLC) to deliver high- quality code, with comprehensive unit testing using xUnit and nUnit.
- Deployed Swashbuckle for API documentation, improving developer accessibility.
- Optimized performance and scalability, mentoring team members on best practices to ensure project success.

IT, System Integration, Internet

- Internet Company (Search Engines, Payment Systems, Social Networks, Information and Educational, Entertainment Resources, Website Promotion etc.)

Full Stack NET Developer

- Spearheaded the development of a modern web application, building reusable UI components with React and TypeScript, styled with Material UI for a sleek, responsive design.
- Implemented Redux (Thunk) for efficient state management, integrating Auth0 for secure authentication and html2canvas for dynamic content rendering.
- Designed intuitive menu and drawer components using TypeScript, enhancing user experience.
- Optimized code quality and performance using jsHint and YSlow, ensuring robust and efficient frontend delivery.
- Deployed the frontend on Digital Ocean and established a streamlined CI/CD pipeline with Azure DevOps for seamless updates.
- Mentored junior developers on best practices, secure coding standards, and modern development workflows, fostering team growth.
- On the backend, implemented a repository pattern following code-first and Domain- Driven Design (DDD) principles for maintainable architecture.
- Integrated Swashbuckle (NuGet) to enable SwaggerUI for API documentation, enhancing developer experience.
- Leveraged GraphQL for efficient data querying and utilized xUnit, nUnit, and Moq for comprehensive unit testing, ensuring high code reliability.

Further information

About me

I am a passionate and experienced senior software engineer specializing in C#, .NET, and game development, with deep knowledge of cutting-edge technologies such as blockchain, GPT, RFID, and NFC. Over the years, I have developed a broad skill set spanning a wide range of areas, allowing me to contribute to innovative projects in gaming, decentralized finance, and real-world technology applications.

My journey in technology began with a passion for the Microsoft ecosystem, which led me to specialize in C# and .NET frameworks. I have successfully built scalable, high-performance solutions in a variety of areas, from game development in Unity and Cocos2D to blockchain

applications, including NFT marketplaces and meme trading bots. My work on decentralized applications (DApps) and smart contracts, primarily using Solidity and Ethereum, demonstrates my commitment to integrating cutting-edge technologies into user-facing platforms.

In game development, I focus on creating immersive gameplay experiences using Unity and C#, with expertise in multiplayer game mechanics and performance optimization. My passion for games, combined with my technical skills, drives me to innovate in the GameFi and Metaverse spaces. I also successfully utilize RFID and NFC technologies to enhance user experience and asset tracking in both games and real-world applications.

As a technology enthusiast, I constantly explore the possibilities of GPT-based and AI-based solutions, integrating natural language models into real-world applications such as chatbots, intelligent systems, and even game narratives. I strive to continually learn and innovate, staying one step ahead while mentoring and collaborating with talented teams to create cutting-edge software solutions.

Ultimately, my goal is to push the boundaries of what technology can do, using my expertise to create smarter, more immersive, and decentralized gaming experiences that positively impact both users and entire industries.
