EDUCATION

Bachelor
Computer Science
The University of Liverpool
2013 - 2017

SKILLS

Java Development

Java
JSP
J2EE
JDBC
Maven
Gradle
Spring MVC
Spring Boot
Struts
Java Swing
Java Fx

Frontend

React
Angular
Vue

Database

MySQL
PostgreSQL
Oracle
DB2

CAREER OBJECTIVE

Senior Java Full Stack Developer with over 6+ years of experience in software design, development, implementation and software engineering which also includes integration, maintenance and testing of various client/server, and web applications. Skilled and experienced in Core Java, Spring (and frameworks), Hibernate with JPA, Spring MVC, Spring Data, Rest services, JSON, Junit 4.0, mockito framework. In-depth knowledge of patterns and practices, including Object Oriented Programming, MVC, REST architecture, Agile, Test Driven Development (TDD) and Continuous integration. Strong working knowledge on modern build tools and continuous integration framework.

WORK EXPERIENCE

Software Engineer

Transactly

Jan 2022 - Dec 2022 / Remote

- Developed frontend using React/Redux and
- Used Redux-Thunk and implemented mobile-responsive.
- Used Material UI CSS Frame work.
- Developed backend using Java Spring framework.
- Used Oracle for database because Oracle is best database system for large data.
- Used IOC, AOP, DAO, Context, ORM modules to developed backend.
- Implemented application-level persistence using Hibernate and Spring.
- Used Kubernetes for CI/CD.
- Used JSON for storing and exchanging information between browsers and servers.
- Used Unit testing dependencies such as Junit and Spring test.
- Developed backend using Microservices.
- Experienced consuming APIs using AJAX and manipulating/consuming JSON objects.
- Used jQuery for callbacks, promises and event-based functions.
- Experienced in working with HTML5 APIs for Video, Audio, Files, etc.
- Implemented application-level persistence using Hibernate and Spring.

Full Stack Java Engineer

Callsign

Oct 2019 - Dec 2021

- Fully-involved in the architecture, design, and development of new products and features

MongoDB

Firebase

Tool

Tomcat

Kafka

Elastic Search

Solr

Lucene

CI/CD

Github

Docker

Heroku

Jira

Bitbucket

AWS

Azure

GCP

Microservice

- Wrote a new, modern version of the Callsign dashboard from scratch in React. I managed to phase out the old version of the product iteratively by working closely with product designers to rethink and redesign features and move them to the modern view
- Created an extended version of the Callsign Admin REST API which provides a standard interface for onboarding
- Contributed to Callsign On Premise (OP). We were tasked to extract part of the platform to allow deploying it on clients
- Architected and developed the first version of a multi-layered security engine that helps enterprises instantly detect and mitigate authentication threats. This later became one of the major selling points of Callsign

Senior Engineer

Ministry of Justice

Jun 2017 - Sep 2019

- Ensured the divorce microservices fit in the overall high-level design of the reform program. This involved regular
- Created low-level design documents, selecting the right tools and technologies, and made sure that the software
- Removed technical impediments and owned the overall sprint outcome
- Created new and extended existing microservices to deliver features to citizens, government officials, and solicitors
- Led the digital divorce team.

Software Engineer

Freelance

Jun 2016 - Apr 2017

- Worked on 4+ projects using Spring frameworks, MERN & MEAN Stack, including the website development from the scratch
- Developed the website, integrated with full-text search engines such as Solr
- Designed, architected, and implemented scalable cloud-based web applications using AWS, Microservices & GCP, etc
