Profile

Senior Software Engineer | C# Specialist with Over 6 Years of Experience Accomplished Senior Software Engineer with over six years of professional experience specializing in C#, Java, and a diverse tech stack including JavaScript, Java, and TypeScript. Proficient in cutting-edge technologies such as RFID, NFC, blockchain, and game development, with a proven track record of delivering innovative solutions. Successfully architected and launched multiple high-impact platforms, including a Telegram bot, an NFT marketplace, a meme coin trading bot, and robust healthcare and hotel management systems. Passionate about driving technical excellence, I thrive in solving complex challenges and building scalable, secure systems. Committed to continuous learning and mentorship, my goal is to lead and inspire teams while pushing the boundaries of software engineering as a senior developer.

Work Experience

Project Manager, *Refutbol.com*

01/2024 – 05/2025

Roma, Italy

- Designed and built an innovative web platform for analyzing soccer matches using ASP.NET Web Forms, C#, VB.NET, and JavaScript, with FFmpeg integration for advanced video processing.
- Efficiently processed large volumes of XML data, leveraging MS SQL Server for optimized partial data representation to enhance performance and scalability.
- Delivered a robust, user-friendly system that streamlined match analysis, enabling real-time insights for users.

Lead .NET Developer, *Tesora*

06/2022 – 12/2023

Madrid, Spain

- Architected and built a cutting-edge NFT platform, delivering a dynamic frontend using Angular for the user interface and React for a robust admin panel, integrated with Redux (Thunk) and NgRx for efficient state management.
- Styled the application with Tailwind CSS and Styled Components, utilizing a Flex layout for responsive design. Modularized the codebase to promote reusability and collaboration across teams and applications.
- On the backend, designed RESTful APIs using ASP.NET Core Web API and PostgreSQL, incorporating FluentValidation, Cronos, Nethereum, and Swashbuckle for streamlined development and documentation.
- Implemented minting and transfer logic for ERC721 smart contracts using Solidity and Truffle, with IPFS integration for decentralized NFT storage.
- Enabled secure single sign-on (SSO) via OpenID and a proprietary third-party API, while also developing auction, bidding, and creation functionalities.
- Architected a microservices-based backend with three core services for enhanced scalability and maintainability.
- Deployed the backend using AWS Elastic Beanstalk and established a seamless CI/CD pipeline with Azure DevOps, ensuring efficient development workflows.

Full Stack .NET Developer, Tepe

01/2020 – 06/2022
Malmö, Sweden

- Spearheaded the development of a modern web application, building reusable UI components with React and TypeScript, styled with Material UI for a sleek, responsive design.
- Implemented Redux (Thunk) for efficient state management, integrating Auth0 for secure authentication and html2canvas for dynamic content rendering.
- Designed intuitive menu and drawer components using TypeScript, enhancing user experience.
- Optimized code quality and performance using jsHint and YSlow, ensuring robust and efficient frontend delivery.
- Deployed the frontend on Digital Ocean and established a streamlined CI/CD pipeline with Azure DevOps for seamless updates.
- Mentored junior developers on best practices, secure coding standards, and modern development workflows, fostering team growth.
- On the backend, implemented a repository pattern following code-first and Domain-Driven Design (DDD) principles for maintainable architecture.
- Integrated Swashbuckle (NuGet) to enable SwaggerUI for API documentation, enhancing developer experience.
- Leveraged GraphQL for efficient data querying and utilized xUnit, NUnit, and Moq for comprehensive unit testing, ensuring high code reliability.

ASP.NET MVC Developer, Bell Boy Room Service

05/2019 – 12/2019
Tel Aviv, Israel

- Designed and developed a robust web application, crafting an intuitive frontend using Angular, HTML, CSS, JavaScript, and jQuery for a seamless user experience.
- Implemented a real-time chat server using the MVVM pattern, enhancing user engagement with dynamic communication features.
- Leveraged Twilio and SMTP NuGet packages for client notifications and Syncfusion UI with LinqToExcel for streamlined document printing.
- On the backend, architected a scalable system using a code-first approach with Entity Framework 6.0, Firebase, and MS SQL Server for efficient database management.
- Applied the repository pattern, CQRS, MediatR, and Domain-Driven Design (DDD) principles, utilizing LINQ for optimized data queries. Structured the backend into three logical microservices layers to enhance usability and maintainability.
- Integrated Stripe API for secure payment processing, ensuring smooth financial transactions.
- Followed a disciplined Software Development Life Cycle (SDLC) to deliver high-quality code, with comprehensive unit testing using xUnit and NUnit.
- Deployed Swashbuckle for API documentation, improving developer accessibility.
- Optimized performance and scalability, mentoring team members on best practices to ensure project success.

.NET Developer, Dorm Mom

06/2018 – 03/2019
New York, United States

- Partnered with project managers, business analysts, and stakeholders to define system requirements, features, and functionalities, ensuring alignment with business goals.
- Architected a robust system design and database schema, prioritizing scalability, security, and performance for optimal user experience.
- Developed a dynamic user interface using ASP.NET MVC, HTML5, CSS, and JavaScript, delivering an intuitive and responsive front-end.
- Engineered backend services and APIs using T-SQL, Entity Framework, and the Repository Pattern, ensuring efficient data management and seamless integration.

- Incorporated third-party tools, including payment gateways, video hosting services, and analytics platforms, to enhance functionality and user engagement.
- Conducted rigorous testing, including unit, integration, and acceptance testing, to ensure system reliability and quality.
- Deployed the platform to production using Azure DevOps and Azure App Service, establishing a streamlined CI/CD pipeline for efficient releases.
- Provided ongoing technical support, troubleshooting issues, resolving bugs, and mentoring team members to maintain system excellence.

Education

Bachelor Degree, *Portland State University*

04/2014 – 04/2018

Graduated from Portland State University, a leading public research institution known for its innovative programs and commitment to sustainability. Engaged in rigorous coursework and hands-on projects, fostering expertise in software engineering and emerging technologies. Graduated with Honors and Completed capstone project in blockchain development.

Portland State

MongoDB Driver
Npgsql
SignalR

Interests

Soccer

Avid soccer enthusiast, leveraging my passion for the sport to drive innovation in sports technology. Developed a soccer match analysis web platform using ASP.NET Web Forms, C#, VB.NET, JavaScript, and FFmpeg, optimizing large-scale XML data processing with MS SQL Server to deliver real-time insights for enhanced match analysis.

Gamer

Passionate about gaming, particularly Dota 2, which fuels my enthusiasm for game development and inspires innovative solutions in creating engaging, high-performance gaming platforms.

Cryptocurrency

Enthusiastic about cryptocurrency and meme culture, with a focus on the Solana blockchain, driving my interest in token creation and community-driven projects that blend humor with decentralized technology.

Projects

Solana Meme Coin Trading Bot, *Rust Developer*

Developed a Solana Meme Coin Trading Telegram Bot using Rust, enabling seamless interaction for users to trade meme coins on the Solana blockchain. The bot allows users to access real-time market data, place trades, and track their portfolio directly through Telegram.

Key Contributions:

- Bot Development: Utilized Rust for efficient, high-performance development, ensuring fast and reliable interactions with the Solana blockchain.
- Telegram Integration: Integrated the bot with Telegram to provide users with an intuitive, chat-based interface for trading meme coins.
- Solana Blockchain Integration: Leveraged Solana's RPC API to fetch real-time data and process transactions with low latency.
- Error Handling & Performance: Focused on optimizing bot performance, error handling, and scalability to support high-frequency trading demands.

Tesora International, *Lead Net Developer*

- Architected and developed an innovative NFT platform, featuring a dynamic frontend built with Angular for the user interface and React for a robust admin panel. Integrated Redux (Thunk) and NgRx for efficient state management across the application.
- <https://github.com/TopTen100/Tesora-Backend>

- <https://www.tesora.art/>
- <http://nftdatabase-dev.us-west-2.elasticbeanstalk.com/swagger/index.html>

TePe USA, *Full Stack .Net Developer*

- Implemented the backend with the Repository pattern, Code First, and Domain-Driven Design (DDD) principles, using T-SQL for database management.
- Built the frontend with React (TypeScript), Material UI, Redux, and React Hooks for state management, using wireframes to dynamically control the canvas.
- <https://github.com/TopTen100/TePe-API>
- <https://github.com/TopTen100/TePe-Frontend>
- <https://tepe-brt.azurewebsites.net/>

Unity Mobe Game, *Unity Game Developer*

Developed a mobile game using Unity and C# for the client-side, with a high-performance C++ server for backend support. The game offers smooth gameplay, real-time interactions, and robust networking capabilities, delivering an immersive mobile experience.

Key Contributions:

- **Client-Side Development:** Used Unity and C# to build a responsive and engaging mobile game interface, optimizing for performance across different devices.
- **Server-Side Development:** Developed the backend using C++, ensuring high scalability and efficient communication between the client and server for real-time interactions.
- **Multiplayer Functionality:** Implemented real-time multiplayer features, handling synchronization, matchmaking, and player interaction seamlessly.
- **Game Logic & UI:** Designed game mechanics, integrated animations, and developed an intuitive UI/UX for an engaging user experience.
- **Optimization & Performance:** Focused on optimizing resource usage to ensure smooth gameplay, especially in resource-constrained mobile environments.

Bell Boy Room Service, ASP.NET MVC Developer

- Utilized ASP.NET MVC and ASP.NET Web API for the project, following the Software Development Life Cycle (SDLC) methodology. Implemented Microservices Architecture and applied Domain-Driven Design (DDD) principles.
- <https://app.bell-boy.com/>
- <https://github.com/TopTen100/App-Bell-Boy>

Windows UI Desktop Application, Device monitor Desktop Application

- Real-time device monitoring desktop application built with Windows UI framework for tracking system performance, hardware metrics, and connected device status.
- <https://github.com/Topten1004/Device-Monitor> 

Xamarin Mobile House-Sell Application, House-Seller Mobile Application

- Developed a full-featured real estate marketplace application using Xamarin for iOS and Android, targeting the German property market with localized features including property listings, advanced filtering, map integration, and secure user communication.
- <https://github.com/Topten100/Xamarin-HouseSeller>

Card Game Development, Cocos2D Game Developer

Developed a card game using Cocos2d and C++ in Visual Studio 2013, with a focus on performance optimization and interactive gameplay. Integrated Spine for 2D skeletal animations, enhancing the visual appeal and fluidity of character and card animations.

Key Contributions:

- **Game Development:** Utilized Cocos2d and C++ to design and implement game mechanics, ensuring a smooth and responsive user experience.
- **Animation Integration:** Integrated Spine for advanced 2D skeletal animations, enhancing the game's visual quality and dynamic character actions.
- **Performance Optimization:** Focused on optimizing rendering and gameplay performance to ensure the game runs efficiently on various platforms.
- **UI/UX Design:** Developed user-friendly interfaces, making the game intuitive and engaging for players.
- **Debugging & Testing:** Used Visual Studio 2013 to implement debugging and testing, ensuring stability and functionality across game features.
