Summary

Started blockchain since 2016 and before that was a mobile game maker for about 2 years.

From 2016, mainly contributed on Smart contract development using Solidity for almost of evm chains, and sometimes worked on Rust based chains like Terra and Solana.

In some startup projects, designed the architecture of protocol from the scratch and played a lead role.

Out of that, also love to help frontend developers integrate Web3 on frontend.

Experience

Smart Contract Engineer

Paycer GmbH

Jun 2021 - Apr 2022 (11 months)

Paycer is a bridge protocol that aggregates DeFi and crypto services cross-chain and combines them with TradFi to create new user-friendly financial products and services available on an easy to use platform. Here I contributed on

- Bridges between Polygon, BSC and Eth.
- Lending / borrowing platform forked from Compound
- Subgraphs of paycer core

Smart Contract Developer

Moonwalk.com

Mar 2021 - May 2021 (3 months)

Moonwalk is a platform for NFT communities which enables brands and creators to build future proof communities using NFT's, generative collections, social and content rewards, and payment integrations.

Here my contributions are

- ERC20, ERC721 Token Factory smart contracts
- NFT Auction contract forked from Zora Protocol

Smart Contract Developer

TrustToken

Jun 2019 - May 2021 (2 years)

TrueFi (TRU) is an Ethereum token that powers TrueFi, a decentralized finance protocol for uncollateralized lending using on-chain credit scores. TRU can be used for staking (i.e. to approve or reject new loans) and governance on the TrueFi protocol. Here I contributed on

- TrueFi v1 staking & governance smart contracts
- Yield Farming, Loan Token factory smart contracts

Blockchain Developer / Advisor

XAYA

Jun 2018 - May 2019 (1 year)

Xaya is an open-source permissionless blockchain designed for hosting complex fully decentralized games and truly open metaverses. My contributions are

- Subgraph and bridges for Eth, BSC, MATIC
- Advise Taurion blockchain game development
- Advise Soccer Manager Elite blockchain game using Unity

Blockchain Developer / Advisor

GAME Credits

Apr 2017 - Mar 2018 (1 year)

- Contribute to the smart contract development and migration of Game Credits
- Advise Nova Blitz game development

Blockchain Developer

GAME Credits

Apr 2016 - Mar 2017 (1 year)

- Develop Blockchain game - NOVA Blitz for android & ios, steam platform using Unity
- Maintain the product

Game Developer

GAME Credits

Feb 2016 - Mar 2016 (2 months)

GameCredits (GAME) is a cryptocurrency project that wants to become the single payment solution for the online gaming industry. This is my first blockchain project which brought me to the Metaverse.

Education

Singapore Institute of Technology

Bachelor's degree, Computer Science

Skills

Solidity • Smart Contracts • DeFi • Github • Truffle Framework • Ethereum • JavaScript • Node.js • Rust (Programming Language) • Non-Fungible Tokens (NFTs)
