Summary

A software engineer is seeking a full-time remote job in web and blockchain application development where I can apply my technical knowledge and skills, with a tendency to simple, elegant code and user-friendly websites and web applications. My 5+ years of experience and detail-oriented nature never let anything get to the client unless it's perfect and follows best practices. I do my best to make sure what I create represents the client's needs and meets their expectations and I always like to challenge myself by dividing into new stuff.

Experience

Senior Full Stack Engineer

Derived Finance

Sep 2021 - Sep 2022 (1 year 1 month)
