

JIRO MATSUMOTO

Full-Stack & Blockchain Developer

I am a well-rounded full-stack developer passionate about developing quality software. I focus on building projects and my diverse skill sets allow me to tackle any challenge. My preferred front-end technology is React, while on the back-end I have experience with Node.js, Express.js, and MongoDB. I am also very familiar with blockchain technology.

I have worked on a variety of projects at companies of all sizes. And I have been an important problem solver in teams and never failed to deliver quality work with my hard work and problem-solving skills. I really care about user-friendliness and the performance of my applications.

Education

- | | |
|------|--|
| 2013 | Bachelor of Science in Information Science
Faculty of Science, University of Tokyo |
| 2015 | Master of Information Science and technology
Graduate School of Information Science and Technology,
University of Tokyo |

Skills

Blockchain

- Solidity, Rust, Golang, Move
- UniSwap, PancakeSwap, SushiSwap, DEFI, DEX
- ERC20, ERC721, ERC1155
- NFT Marketplace, Business/Financial Platform

Front-end

- HTML, CSS, Javascript/Typescript
- Bootstrap, Material UI, Chakra UI, TailwindCSS
- React/Next, Vue/Nuxt, Angular
- Gatsby, GraphQL, Three.js

Back-end

- Codeigniter, Laravel, Yii
- Node/Express
- Python/Django, Flask
- ASP.NET Core, MVC
- Ruby on Rails

Storage

- MySQL, MS SQL Server, SQLite, PostgreSQL, MongoDB, Redis

Tools

- VS Code, Slack, Git, Github

Experience

Blockchain Full-stack Engineer

HOKK Finance

- Handled the Web3 integration for different wallet connections and contract integrations for multi-chain support, including Ethereum, Binance, Polygon, etc.
- Worked on the token distribution and migration from BSC to Polygon network using BscScan, PolygonScan API, and Solidity.

2021-09-
Present

Senior Blockchain Developer

SORAMITSU, Tokyo, Japan

- Worked on building trading view, swap modal using React, Next, TypeScript, Web3.js, and Subgraph.
- Built smart contracts with solidity and deployed using Hardhat and Truffle.
- Contributed to a contract for NFT registration and redemption with Solidity.

2020-09-
2021-08

Senior Full-stack Developer

WE ARE 4C, Toronto, Canada

- Rebuilt the Vue.js front-end application in Vue3, TypeScript, and Tailwind CSS.
- Built a Node.js and TypeScript back-end for handling transaction reports, billing reports, invoicing systems, and more for crypto partners.
- Created a POC Vue.js front-end platform for an NFT gallery using Moralis.
- Built a front-end application for minting and staking NFTs using React and Web3.js.

2018-04-
2020-08

Full-stack Developer

NETCOTECH, Edmonton, Canada

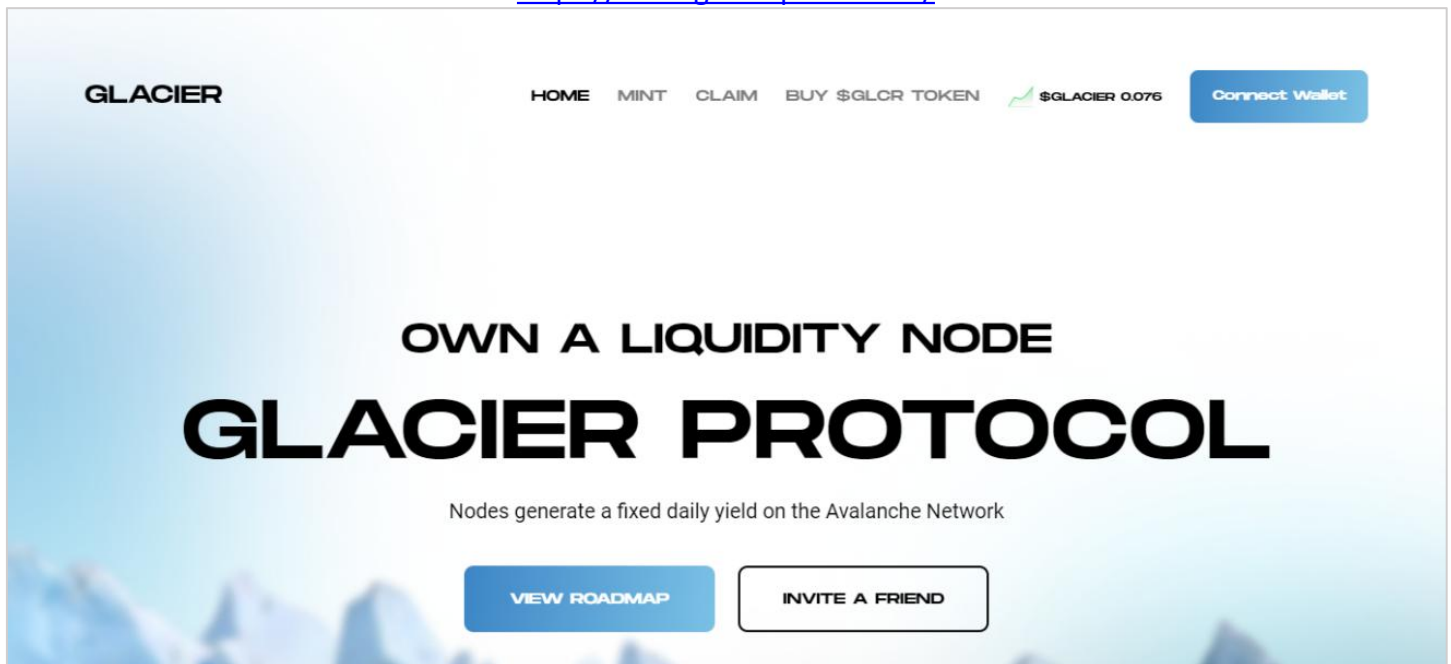

- Created several React front-end admin dashboards for complex table data visualization with user-friendly search features.
- Created a new customized chart library using D3.js, chart.js and Plotly.js.
- Built back-end APIs using Firebase cloud functions, a real-time database, and cloud messaging.

2015-08-
2018-03

Here are some of my latest works.

1. Frontend

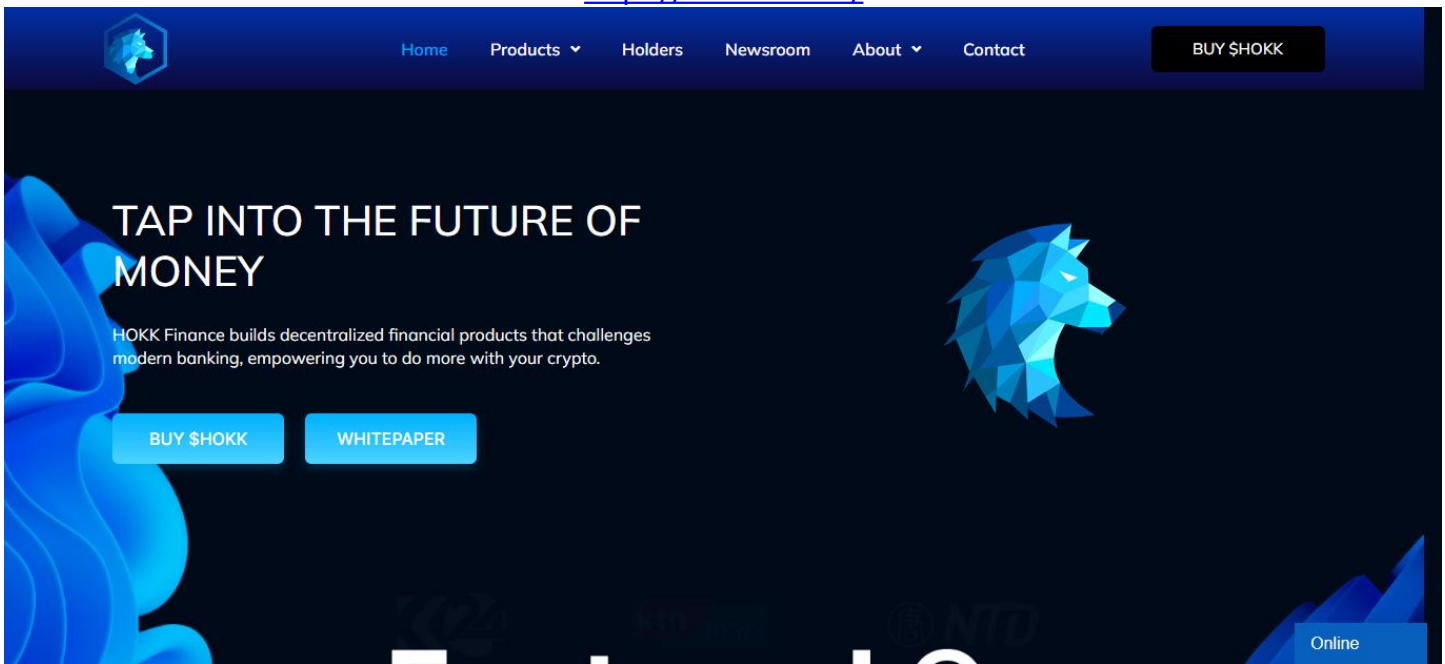

<https://www.glacierprotocol.io/>

<https://metafashionfinance.vercel.app/>

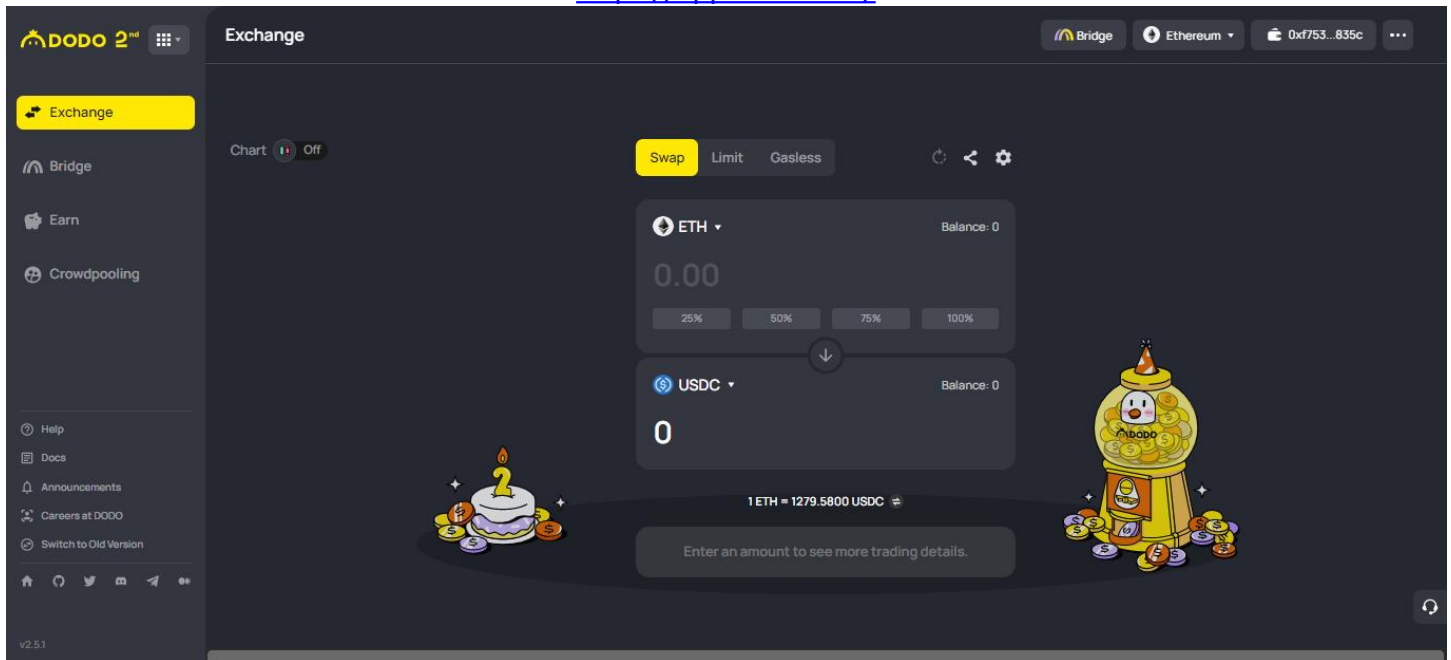

<https://hokk.finance/>

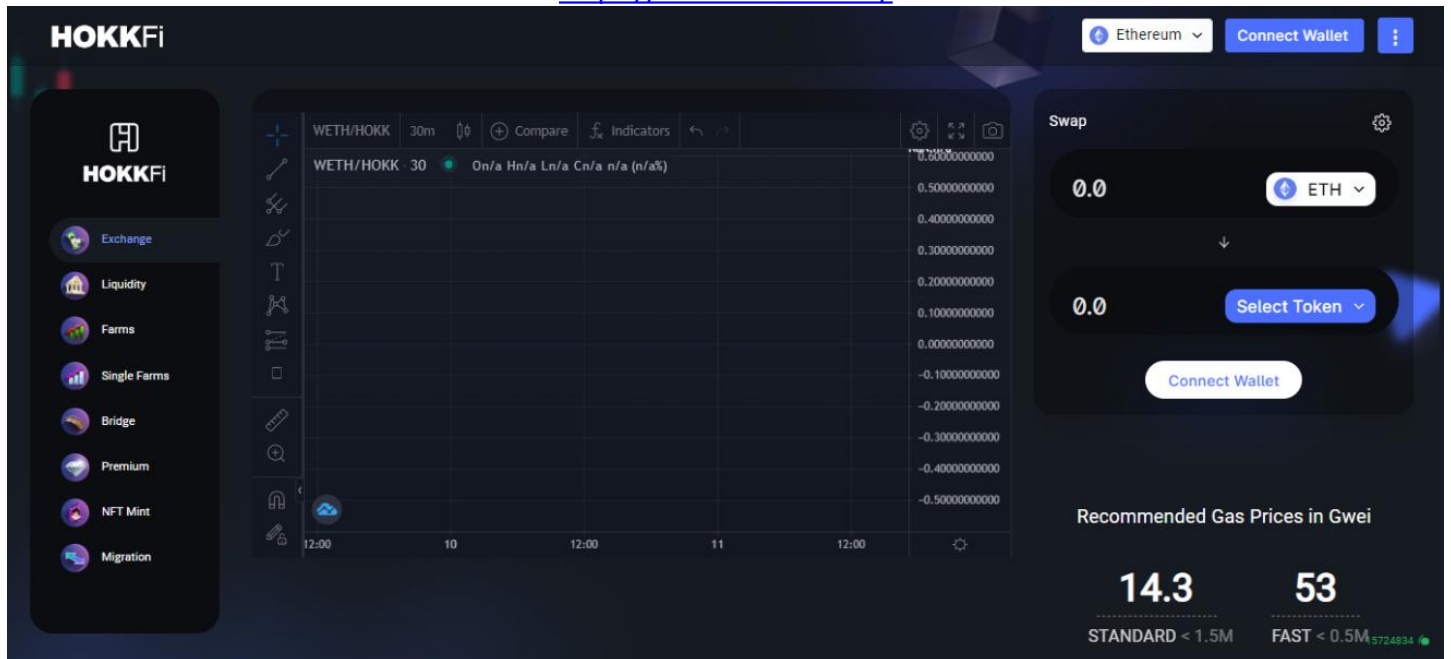

I was in charge of implementing the front-end of these projects. The first project was built with Vue whereas the others were built using React and Material UI. These projects also used Tailwind CSS. React and Vue are very famous front-end frameworks and I am a master of these technologies.

2. DEX

<https://app.dodoex.io/>

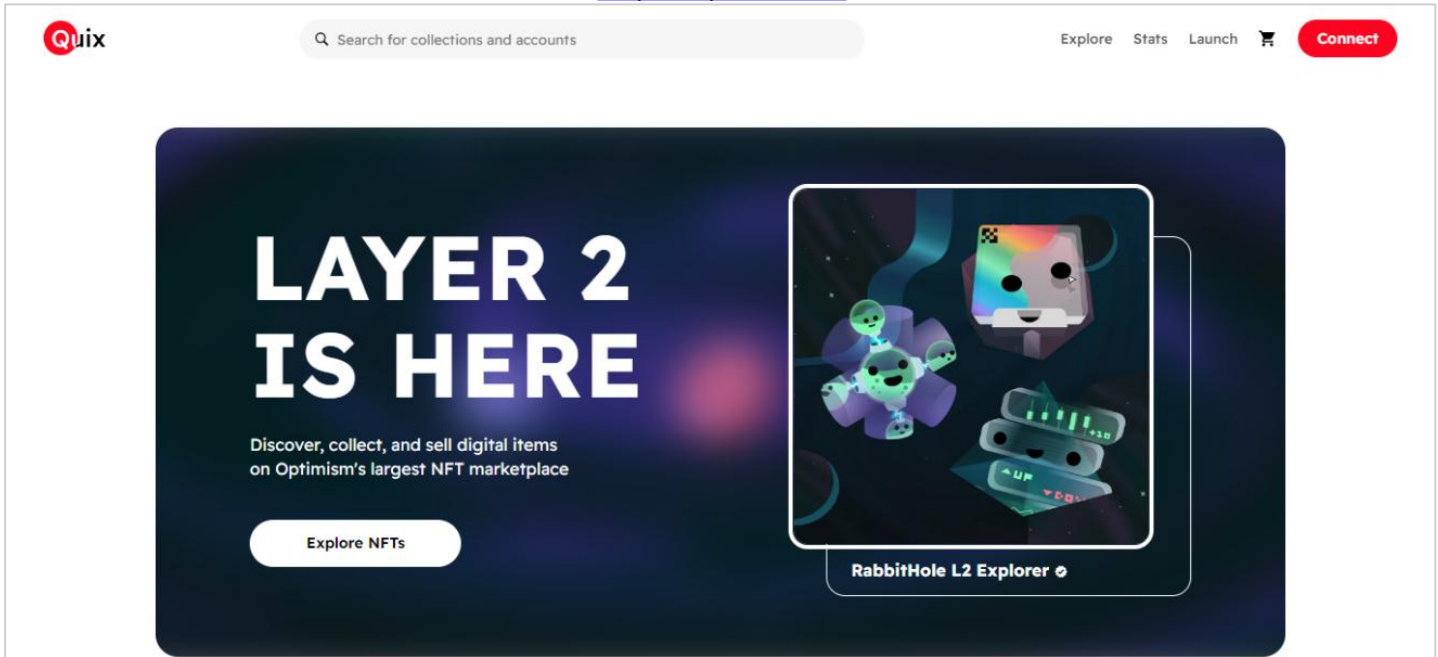

<https://www.hokkfi.com/>

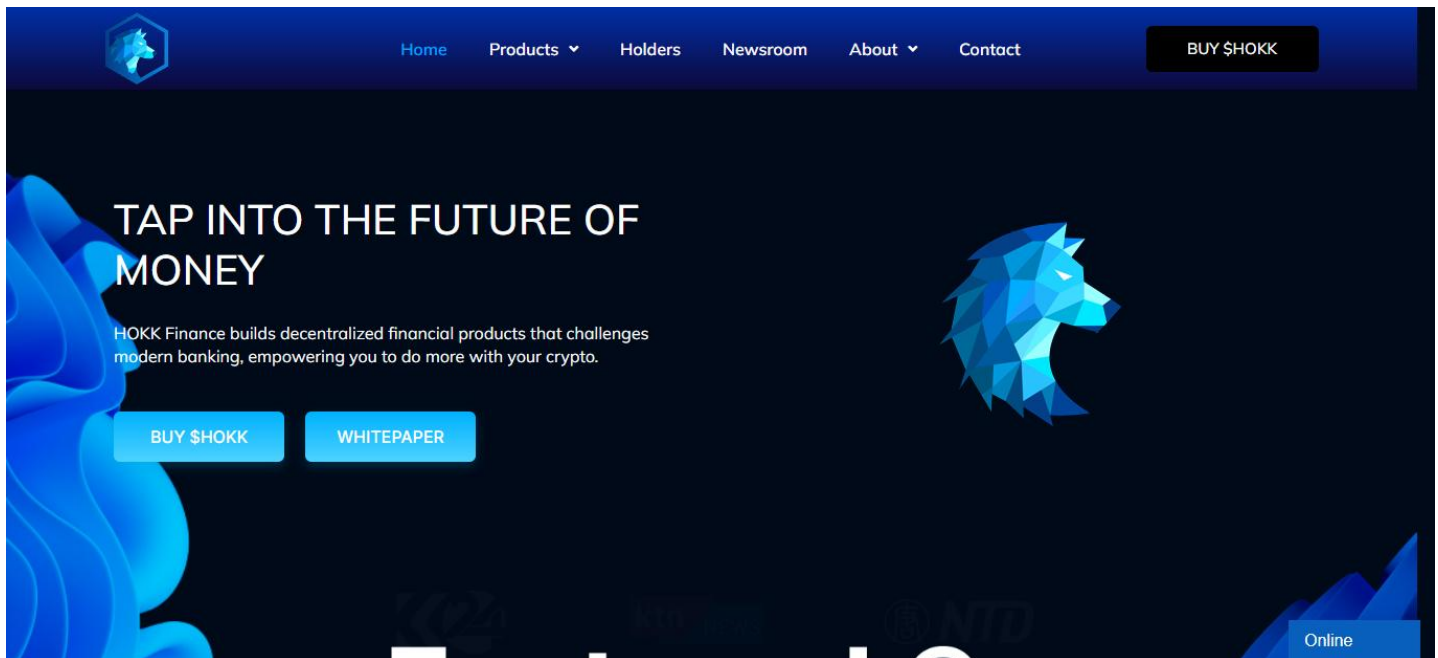

I was a front-end and blockchain developer for these projects. I was responsible for implementing front-end and writing smart contracts. I utilized my expertise on web3 and tokens to do these projects.

3. NFT Marketplace

<https://quixotic.io/>

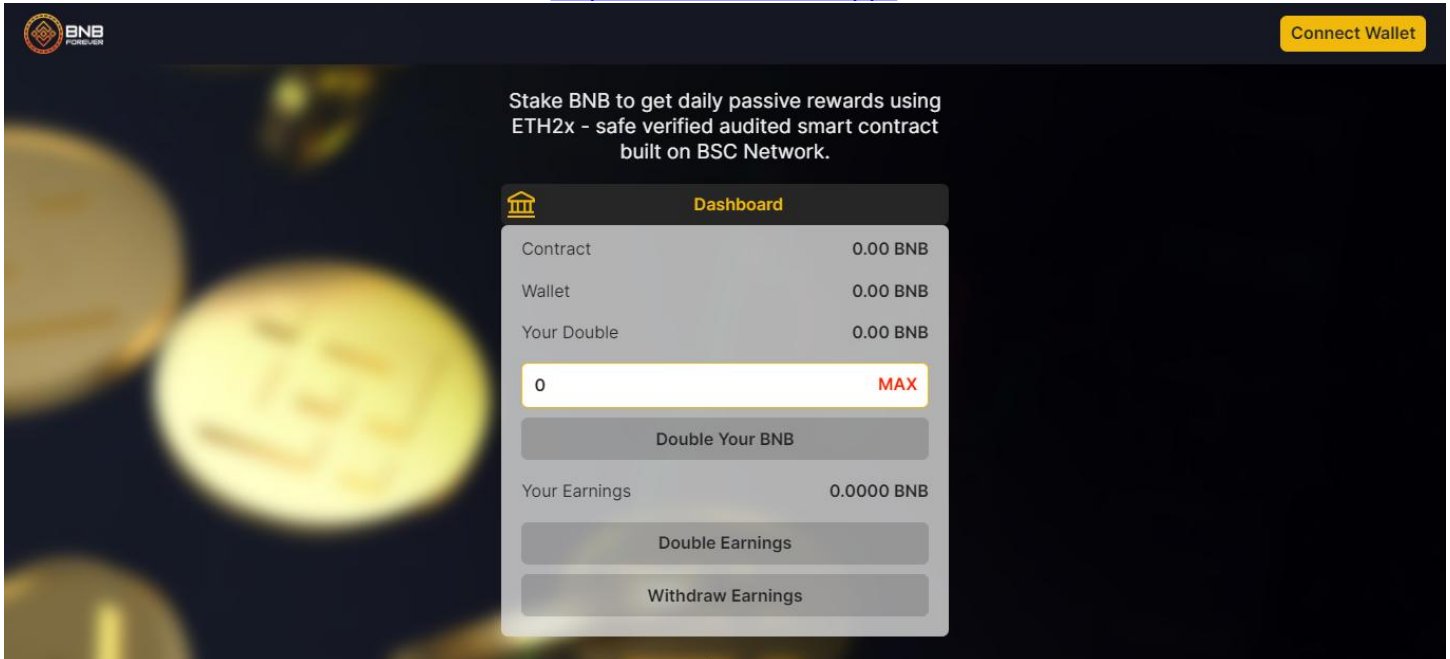

<https://nft.hokkfi.com/>

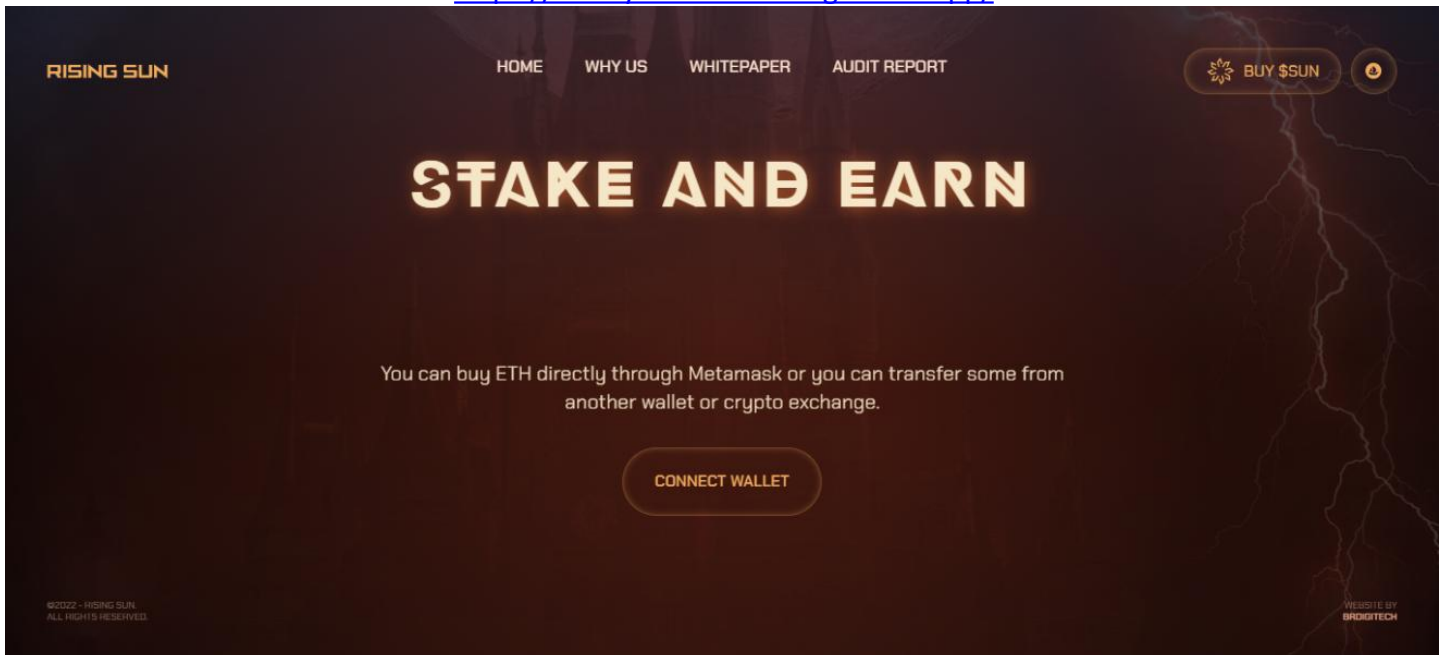

I worked as a core member of the blockchain team and full-stack developer for both projects above. I've built the landing page, deployed smart contracts for NFT minting, and built the marketplace. I have got a deep understanding of ERC1155 and I've made quite fast progress. Our team encountered a serious problem when building the second project and my problem-solving skills were very helpful in dealing with it.

4. Staking

<https://bnb-2x.vercel.app/>

<https://bunnyfarm-nftstaking.vercel.app/>

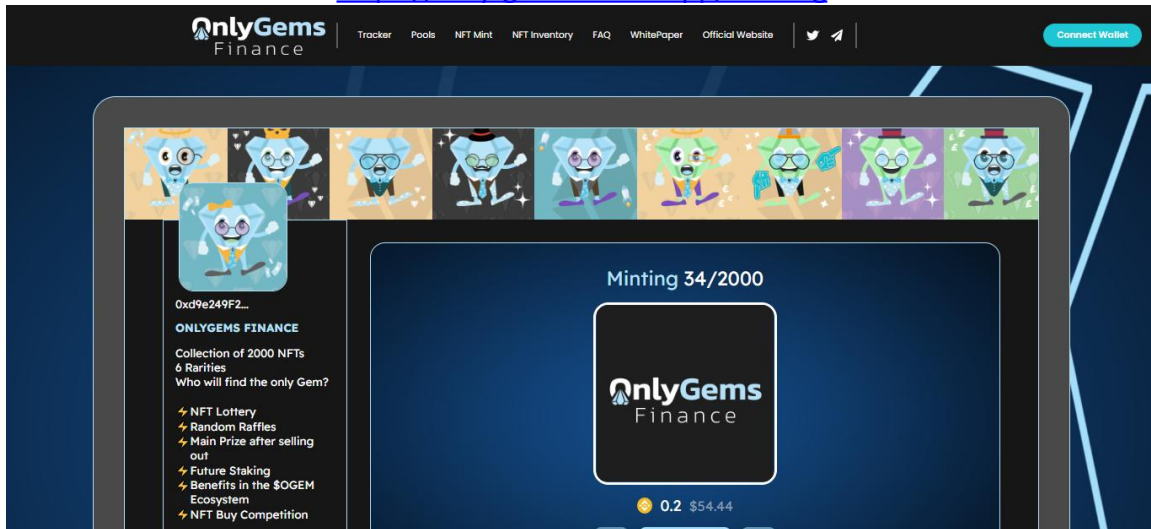

Take a look at the projects above. They are cool, aren't they? I did everything in these two projects from scratch. I used React, Material UI, Tailwind CSS for front-end. I also worked on smart contracts for core functions of this project – tokens and staking.

5. NFT-minting

<https://legendofhati.io/>

<https://only-gems.vercel.app/minting>

I worked as a senior blockchain developer for these projects. I was new to NFT minting when I bumped into the first project, but I could easily get familiar with it sooner thanks to my challenging spirit. After finishing the second project, I already had profound knowledge about NFT minting.
