# SERVICES OFFERED

We do the necessary tests on the work product to ensure quality; this includes system testing, integration testing, stress testing, performance testing etc. In the mobile world, we use device farms to cover as many device varieties as possible.

## Functional Testing Approach:

Each incremental build goes through 3 testing cycles as below:

- Verification of all the planned test scenarios.
- Defect fixes and verification.
- Verification of all the planned test scenarios once again.

## Automation Testing Approach:

Automation Testing is carried out with the help of different tools like Selenium, Appium, Protractor, etc. Test cases are written in various languages like Java and executed automatically.

## Performance Testing Approach:

Performance testing is done by using following approaches:

- Stress Testing
- Scalability Testing
- Load Testing
- Reliability Testing etc.

# *Recent Projects*

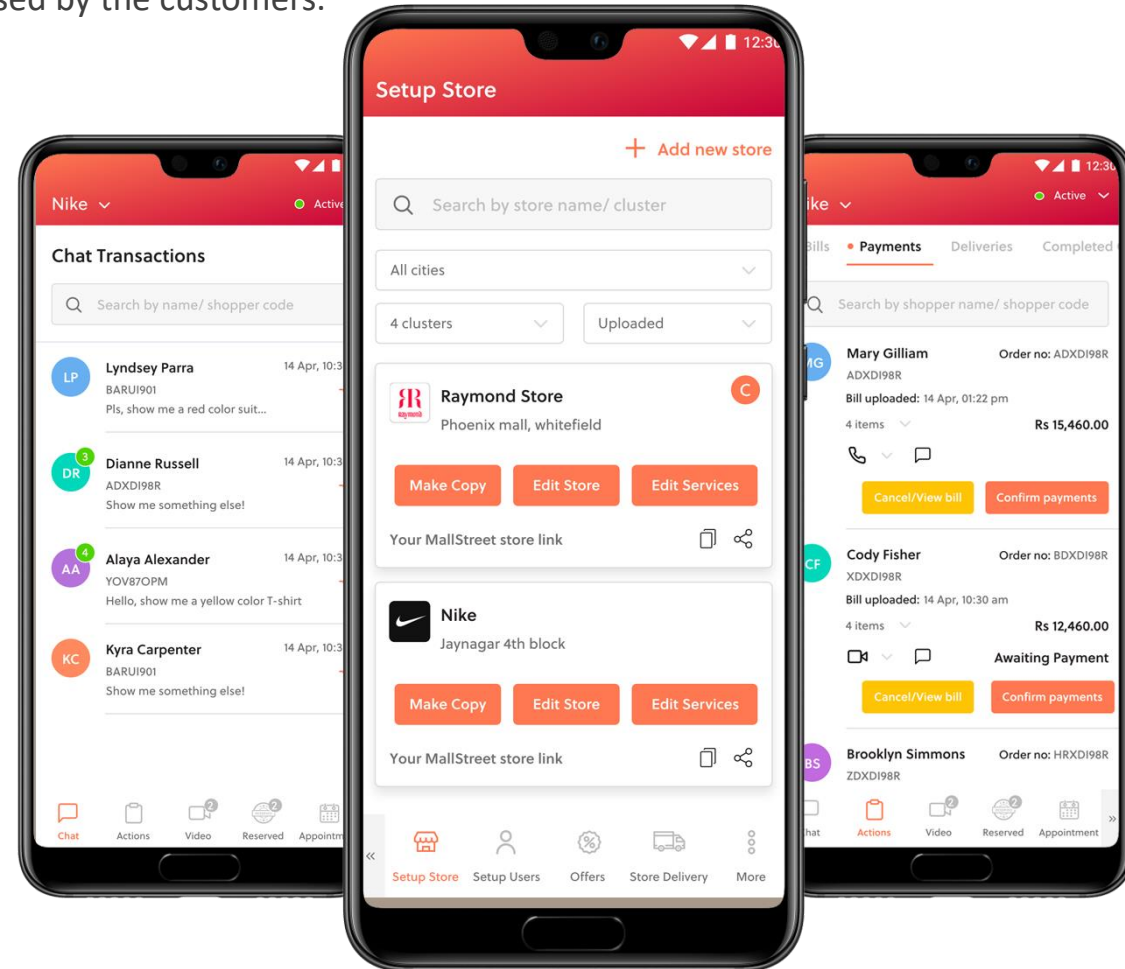

MastR is a live commerce app which allows the businesses to provide virtual shopping experience to their customers. Shop owners can explain the product features to their customers through video calling, they can manage their inventory, raise invoices and schedule slots for pickup and delivery. MastR app connects real time with MallStreet shopping app which can be accessed by the customers.

## Solution highlights:

- Mobile number verification.
- Live video calling.
- One-to-one messaging.
- Billing and invoicing.
- Payment integration.
- Promotions and offers.
- Schedule pickups and deliveries.

**Domain:** eCommerce, Communication

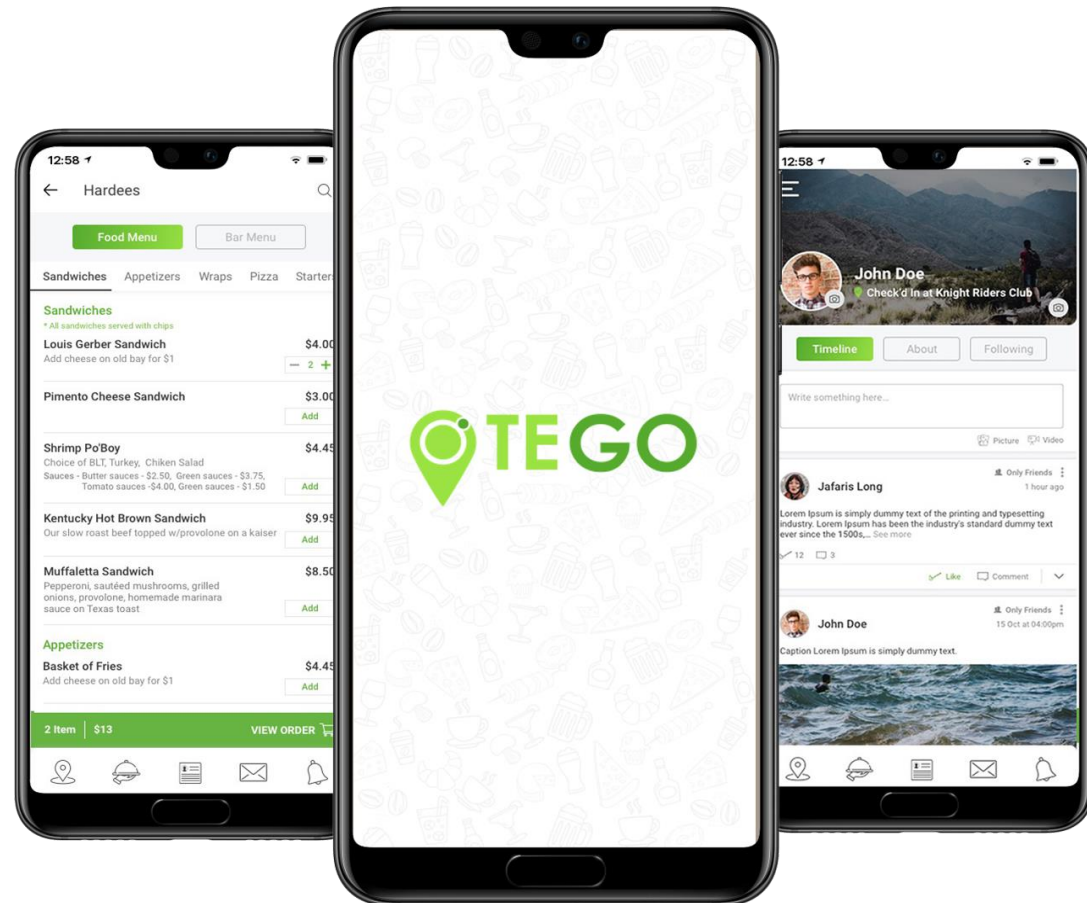

Otego app eliminates the need to wait in the queue! Using Otego app, customers can browse their favorite restaurant; view full menu of the selected restaurant; place and pay for the favourite order online and track Order delivery. They can pick up the order once it is ready. Restaurant owners can manage the orders. Otego is also a social app with features such as feed, post, like, comment, share, social media integration etc.

## Solution highlights:

- Social Media Integration.
- Feed, timeline, posts, likes, comments, shares
- One-to-one messaging.
- Google Map Integration.
- Payment integration.
- Food ordering.
- Search feature.
- Push notifications.

**Domain:** Food Ordering, Social

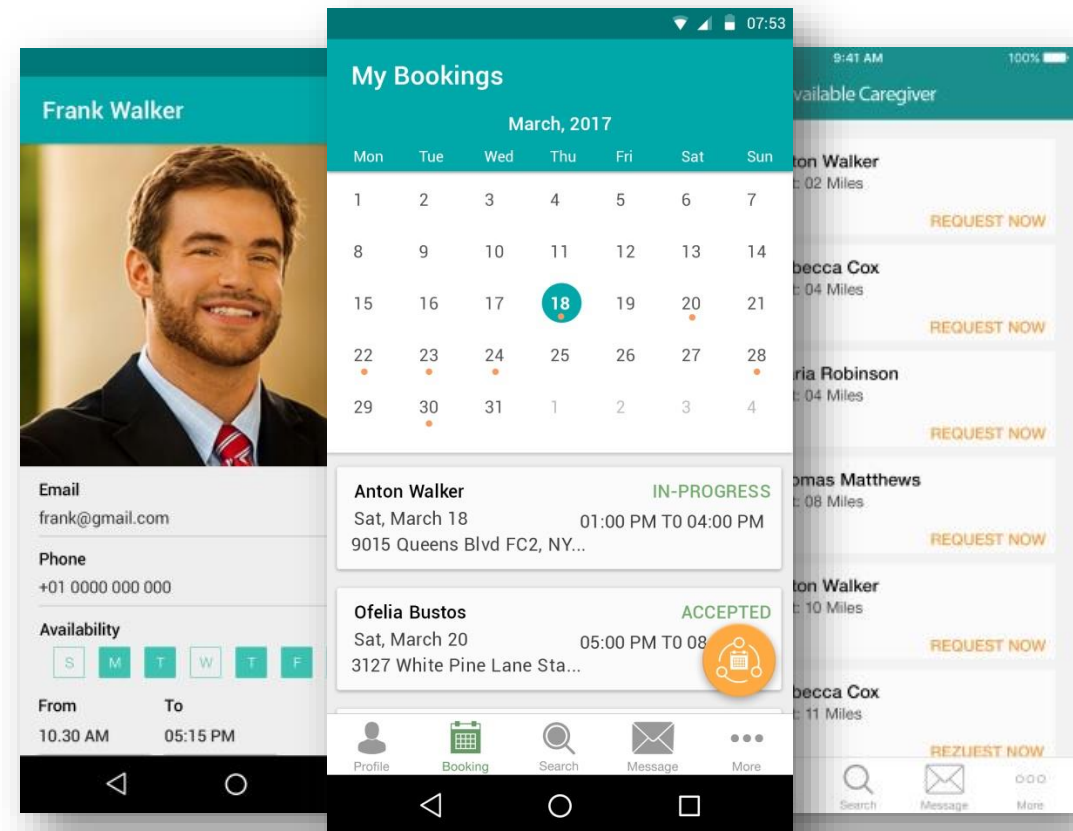

# Phlex65 – On-demand Caregiver App

Phlex65 provides a practical solution to the problem of caregiver burnout and presents a ready-made support system to both older adults and their caregivers. It empowers the seniors by connecting them directly with licensed caregivers in the area, for services such as cooking, light housekeeping, assistance with bathing and other activities, in a real-time digital environment. Users can view caregiver list and book their services. They can even extend an ongoing appointment. They can chat with the caregivers with predefined messages.

## Solution highlights:

- Simple and user-friendly requiring minimal clicks.
- Multi-user login (single app).
- Recurring caregiver bookings.
- HIPAA compliance to help protect PHI data (in-transit & at-rest).
- Payments Splits, Holds & Refunds using Stripe.
- Allows for advance booking (up to 1 week) of caregivers.
- One-to-one messaging with predefined messages.
- Ability to extend ongoing session.

**Domain:** On-demand

# Beach Caddy – On-demand Caddy Service App

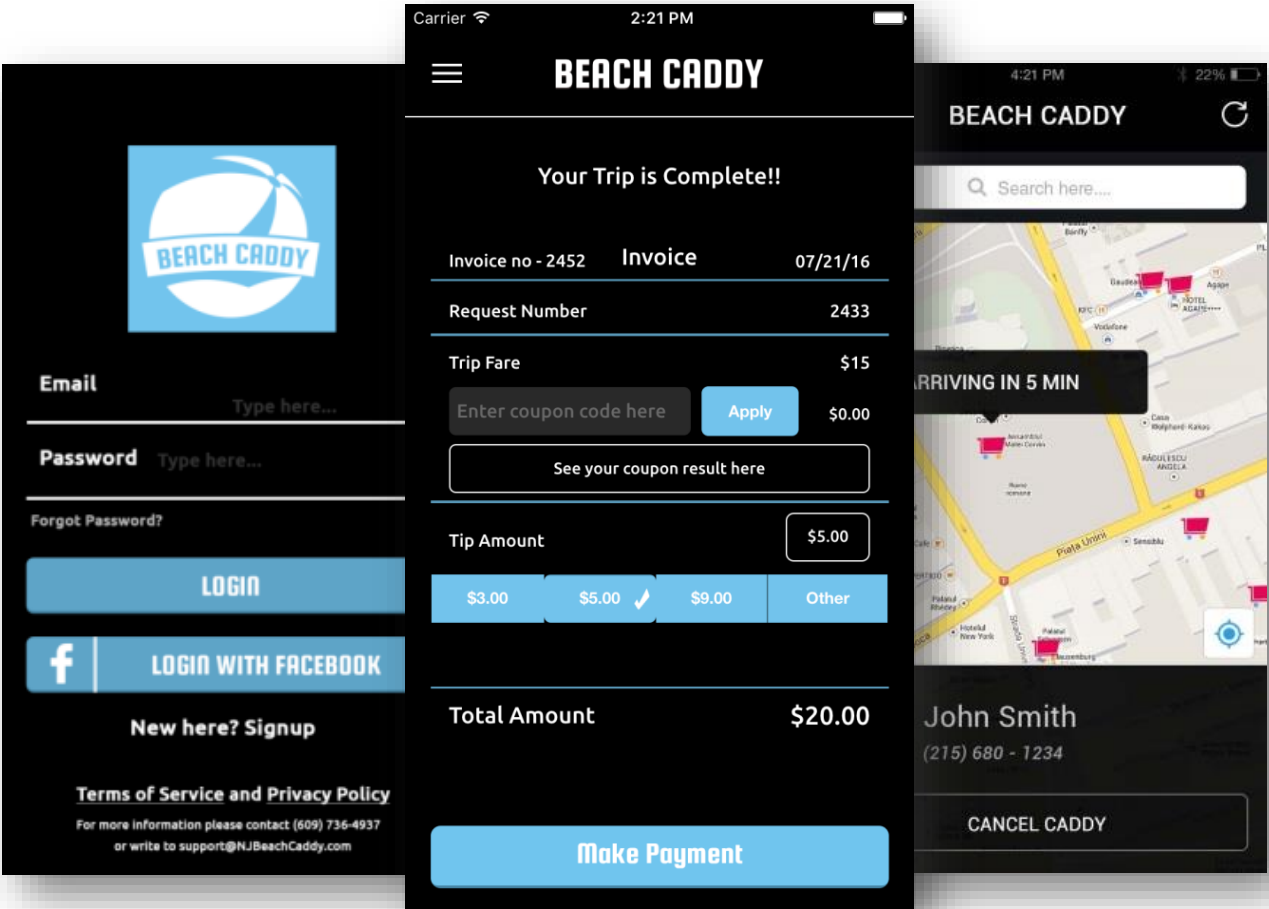

The Beach Caddy app was launched on Memorial Day 2015 and had almost 1000 users registered in first 2 weeks. The solution includes mobile website and a cross platform mobile app. The mobile app allows users to request assistance from beach caddies to help carry items like chairs, umbrellas, and other beach items on to the beach. They can even track the caddy on the map!

### Solution highlights:

- Geo-location integration
- Payment Gateway integration
- Social Media integration
- Multiuser Login
- Push notifications using Pushwoosh
- Camera
- SMS using Twilio
- Web sockets
- Mobile Analytics

Domain: On-demand

We have created an app which calculates the load on the truck. Users can calibrate the weight of the truck with the help of sensors installed in axles of the vehicles. App is created to ensure the weight of vehicles doesn't exceeds beyond the limit. It continuously triggers the calibrated values.

## Solution highlights:

- Beacon integration
- Bluetooth connectivity
- Automatic report generation
- Email notification
- Geo-location tracking
- Bluetooth scanning & detecting the sensors

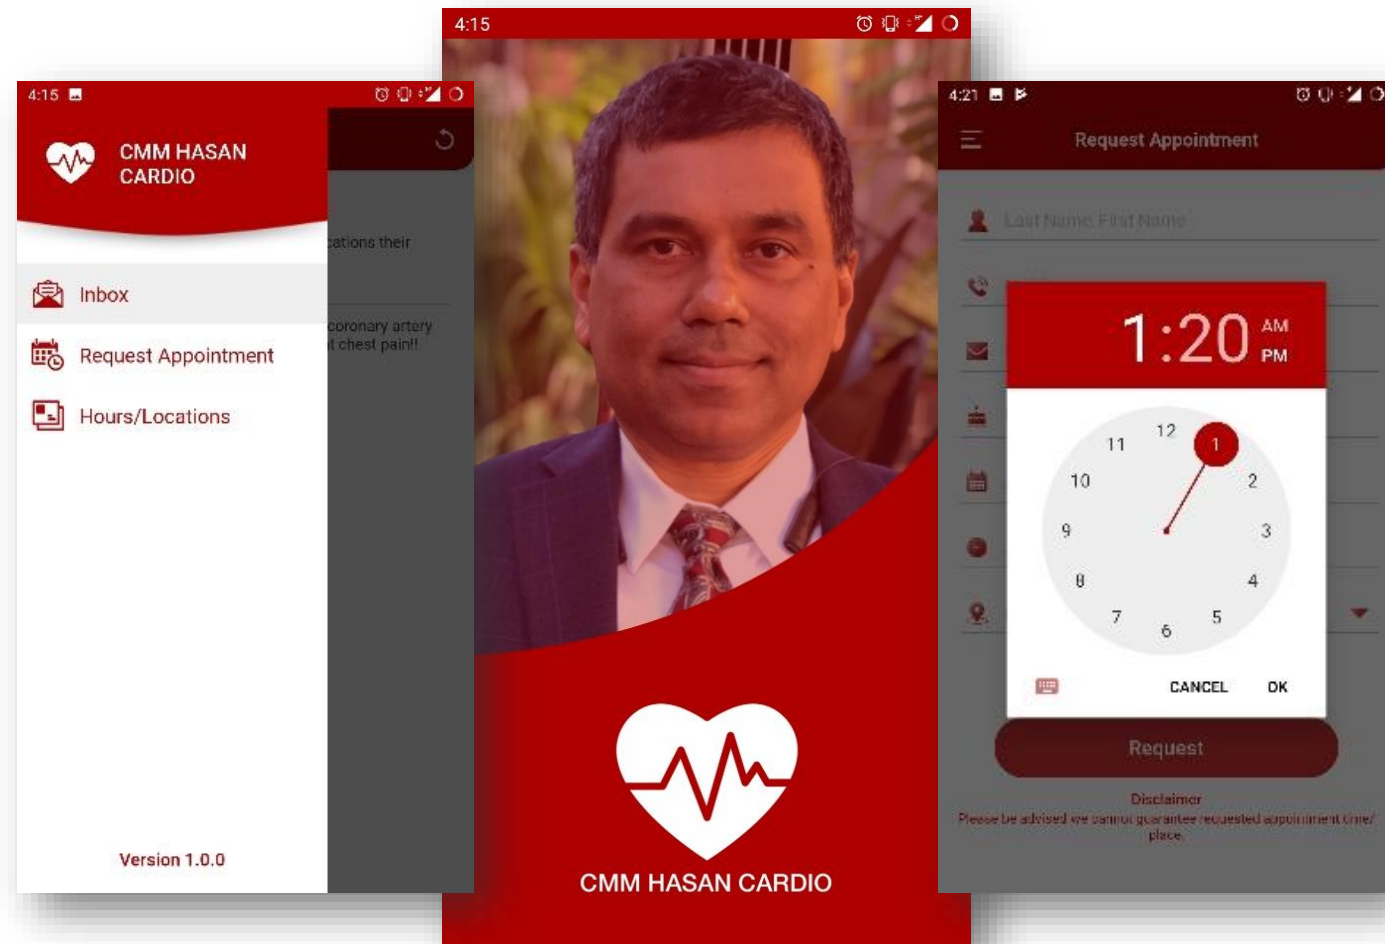

**Domain:** IoT, Transportation

CMM Hasan Cardio is React Native healthcare app specially designed for the patient as well as hospital staff. In this app, admin can share an important announcement, news, important notice to all their internal staff. Apart from that patient can schedule an appointment from this app.

## Solution highlights:

- Push Notifications
- Calendar Integration
- Appointments
- Bulletin Board

**Domain:** Healthcare

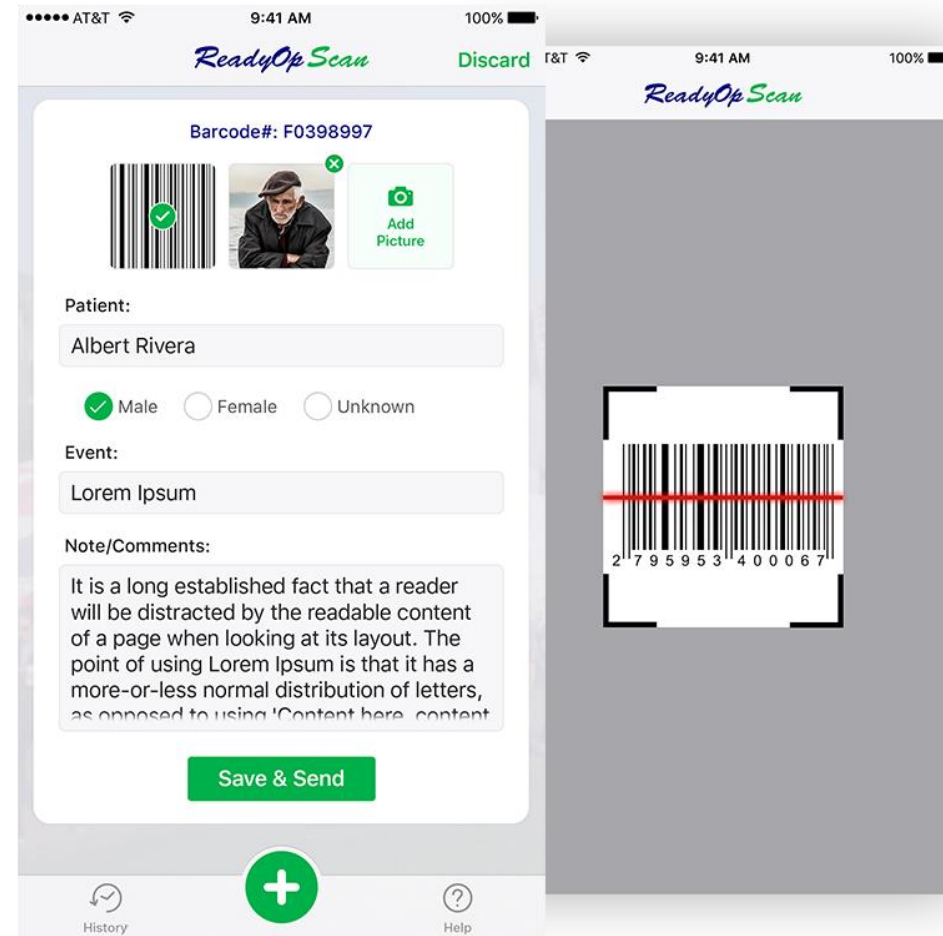

This app designed for emergency medical personnel to use during mass casualty events where there are many victims. This app enables identification, tracking and management of a large number of patients during any catastrophic events for saving their lives!

## Solution highlights:

- Geo-Location
- Barcode Scanning
- Role based Authentication
- Emergency Alerts
- Image Uploads
- Push Notifications

**Domain:** Emergency

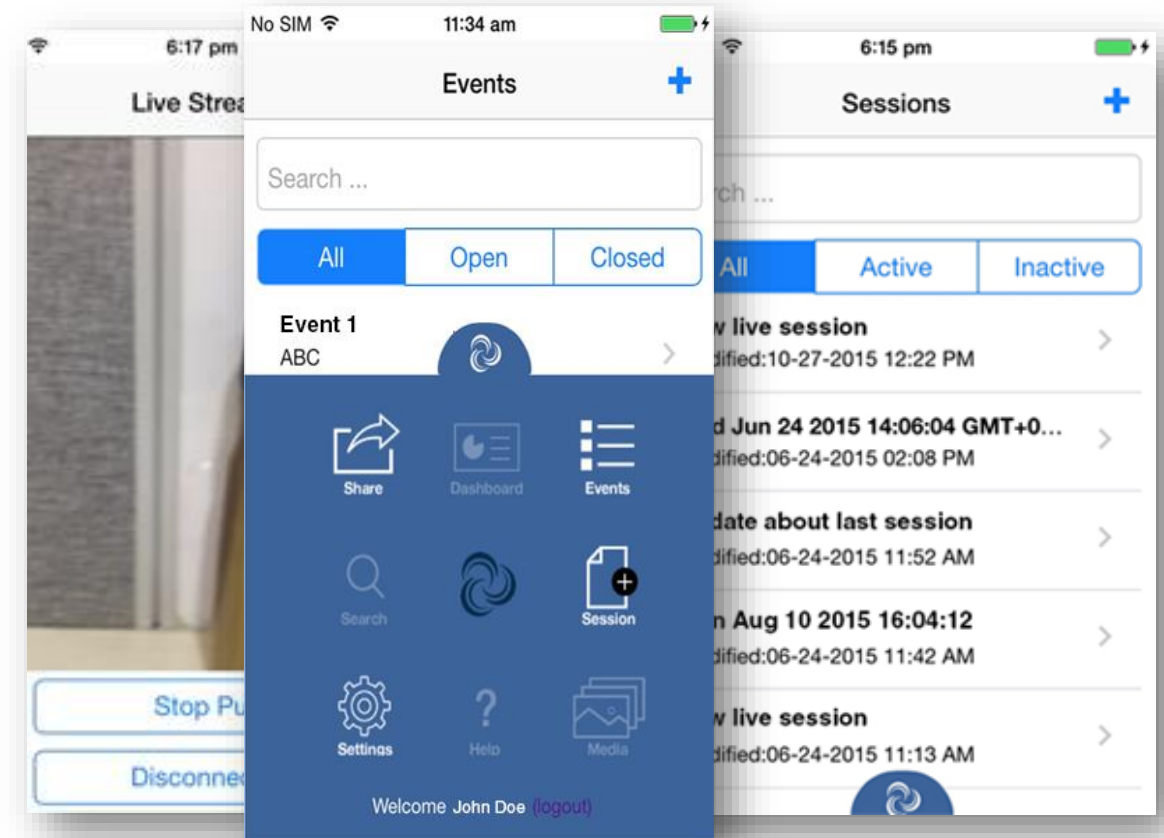

# Communication and Interaction App

A powerful mobile and web communications platform that transforms how businesses capture, catalog, collaborate and share digital media content like images, video, audio and documents. An individual who is on-site can stream live video, share photos, text and documents in real time with any number of other people whether they're across town or distributed around the world. Capture digital media with vMobile's mobile application installed on your iOS or Android smartphone, iPad or tablet.

## Solution highlights:

- Camera
- Image, Video, Audio and Documents Upload
- Play video
- Live streaming of video
- Duplex Audio
- Video/Audio Publishing (group)

**Domain:** Communication

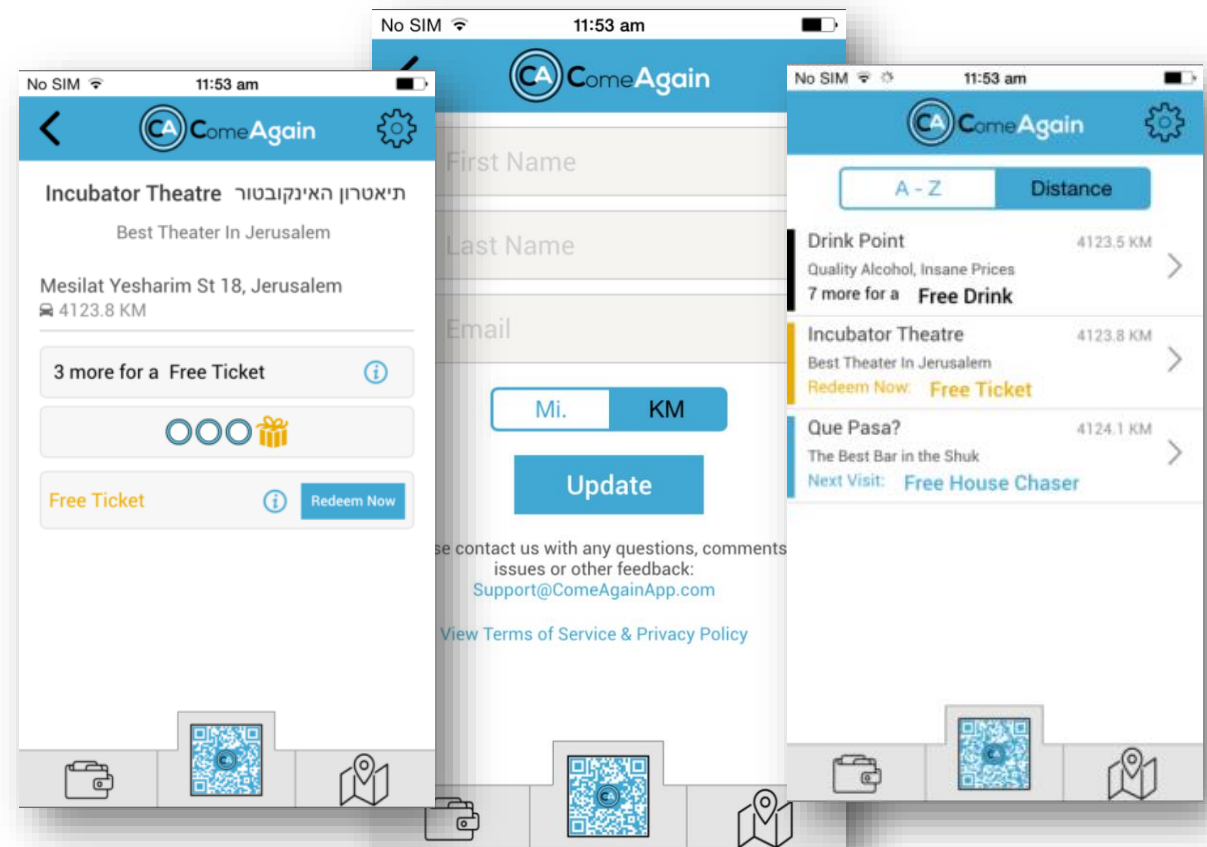

# ComeAgain - Loyalty Rewards App

ComeAgain app is launched in well known cafes within Israel and plan to expand in South-east Asia. This application allows users to start filling up their Reward Cards by visiting any participating ComeAgain location and can receive benefits based on them.

## Solution highlights:

- Supports unlimited number of promotions and offers
- Allows participating merchants to push offers to users
- Maps and Geo-location for merchant listing and navigation
- Supports QR code scanning for offer redemption (loyalty card stamping)
- Geo-fencing is used to validate card stampings and offer redemptions
- Multilingual (Hebrew, Spanish, English)
- User tracking and user behavior tracking using MixPanel and Carnival Integration
- Mobile Analytics

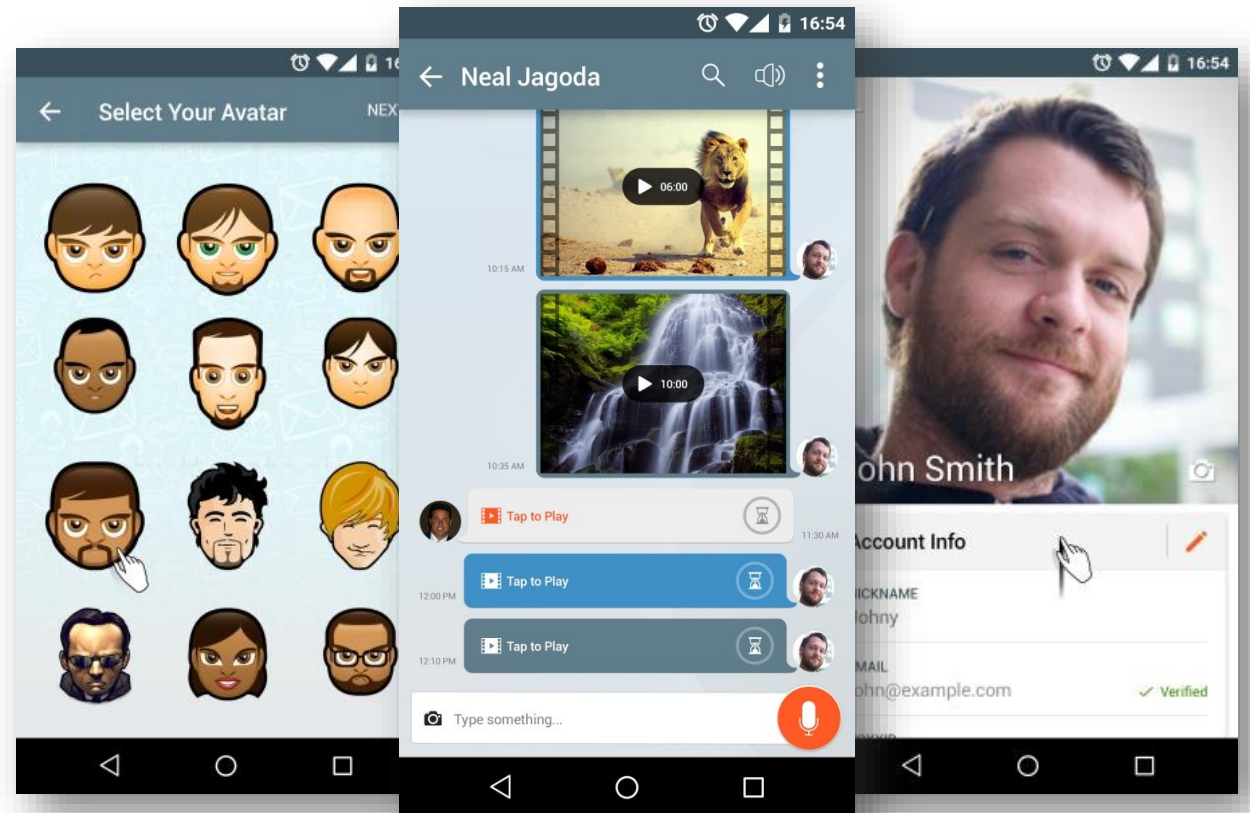

**Domain:** Loyalty Rewards

# YouVOXX – Social Voicemail App

YouVOXX – a breakthrough voicemail & a new-age messaging app. It is replete with the latest and unparalleled features like message melts & recalls, military-grade security, Facebook Messenger (FBM) integration, and social voicemail with voice attachments & transcripts to name a few. This Special App comes with a voice-centric messaging feature which in spite of having a chatting/texting function focuses on sending Audio/Voice content.

## Technologies:

- Backend: Spring, Hibernate
- Frontend: Android SDK, Retrofit REST Client, Google Play Services, GreenDAO Android ORM
- Real-time Messaging: Firebase
- Payment Gateway: In-app Purchase
- App Emailing: Mandrill
- Backend/Frontend Communication: Web Sockets
- Images & Profile Pictures: Picasso for Images

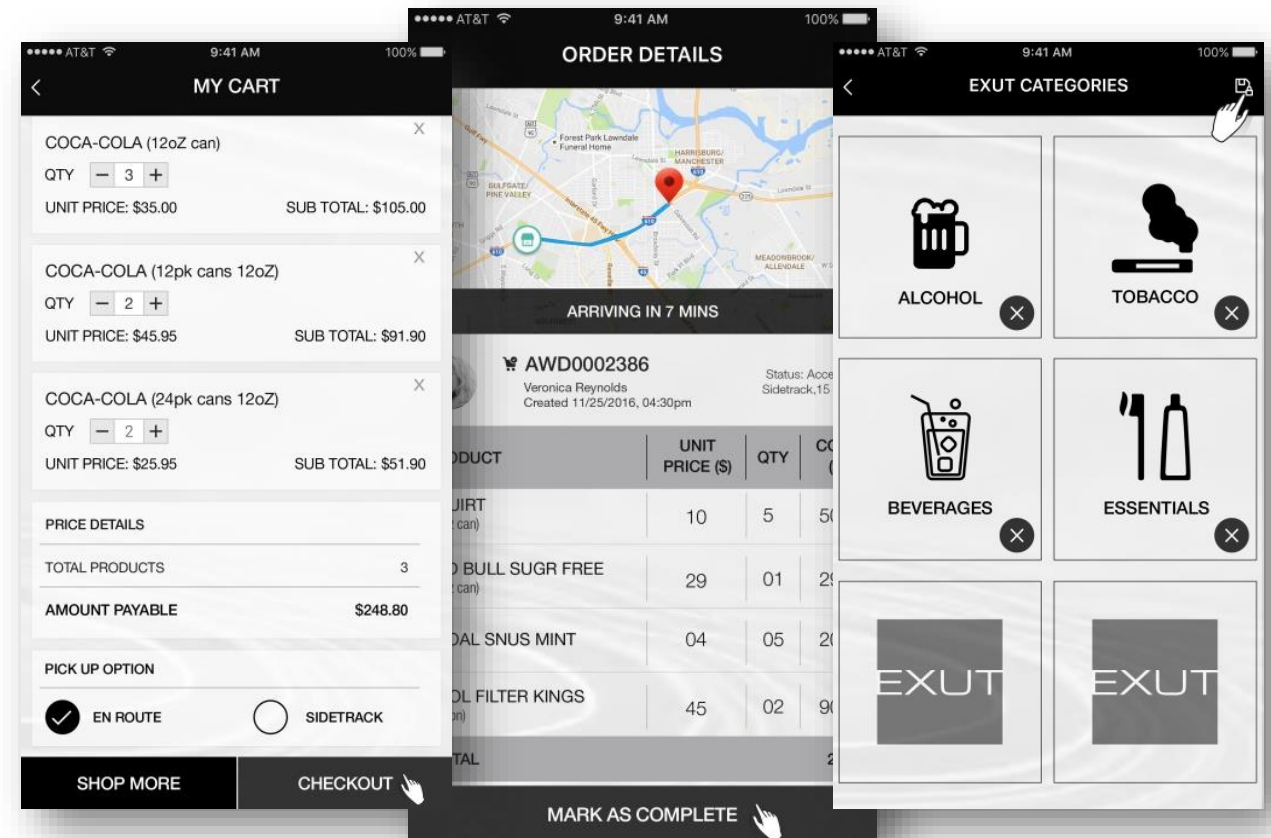

**Domain:** Social, Communication

# EXUT – On-Demand Grocery App

Exut is an on-demand grocery ordering app consisting of a pool of various stores. It allows store owners to upload all their products like beverages, essentials, Alcohol, etc. and manage their inventory and pricing. User can see all the merchants on the map; view their inventories; select products and add them to cart; and pay to check out the order. Users then pickup their orders from the store. ## Solution highlights:

- Real-time availability/location tracking
- Multi-user login (single app)
- Social Media Integration - Login & sharing
- Recurring bookings and History
- Secure Payment Gateway Integration (Stripe)
- Payments Splits, Holds & Refunds
- Allows for advance booking (1 month)

**Domain:** On-demand, eLearning

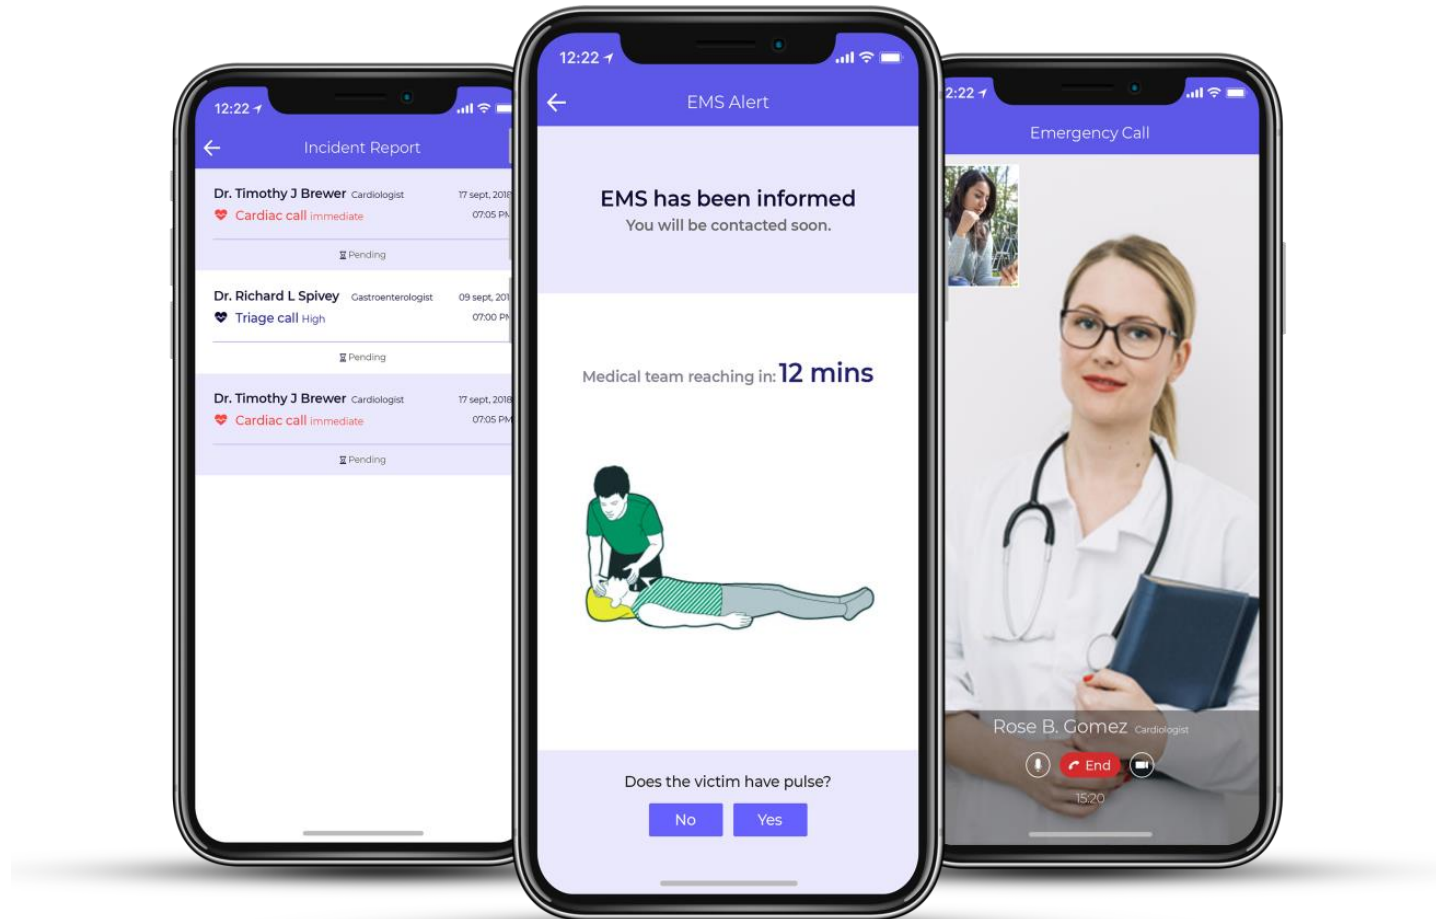

# Medical Emergency Response

Crowdsourcing app that connects patients to medical professionals, so that in the case of life threatening emergencies, they can reach the patient within minutes to save his life. In case of non-life threatening emergencies, they can direct the patients to the right medical action to avoid unnecessary ER visits.

## Solution highlights:

- System Activation
- Voice Activation
- Geo-Location
- Triage Call- Audio & Video Calling
- Payment Integration
- Emergency Alerts

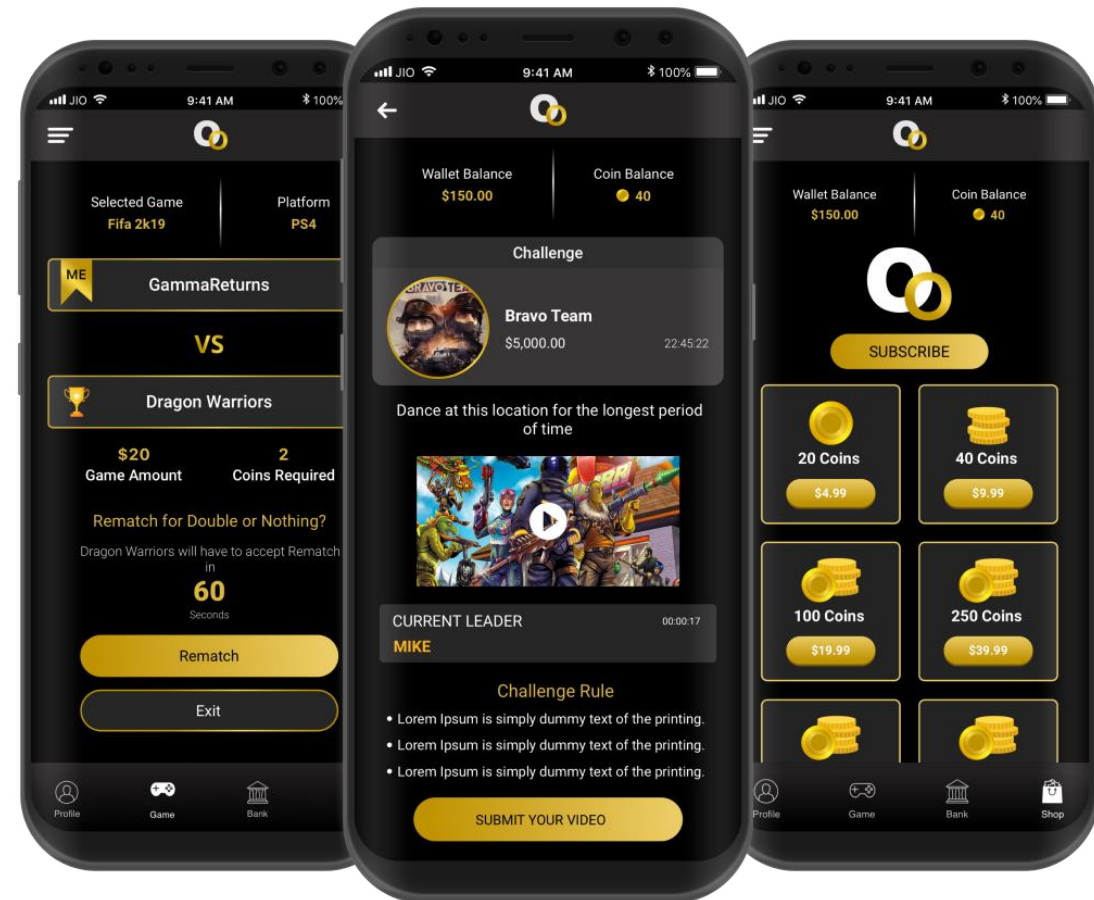

**Domain:** Healthcare, Emergency

Gamers now can wager from their smartphones by competing with other gamers around the globe to bring fun and earn together with intuitive ways. Gamers can resolve their disputes by submitting proofs in the form of images or videos. User can play any game on available platforms (XBOX/PS4/PC/Mobile). Additionally, app admin can setup challenges in which users can participate, compete and win money.

## Solution highlights:

- Native Android
- Backend – Java Spring boot, Postgresql, AWS
- Firebase Services – Real-time database, push notification, authentication
- In-app purchases, subscriptions for Playstore and Appstore
- Android app is developed using MVVM (observable design pattern).
- Text Message Integration, Push Notifications

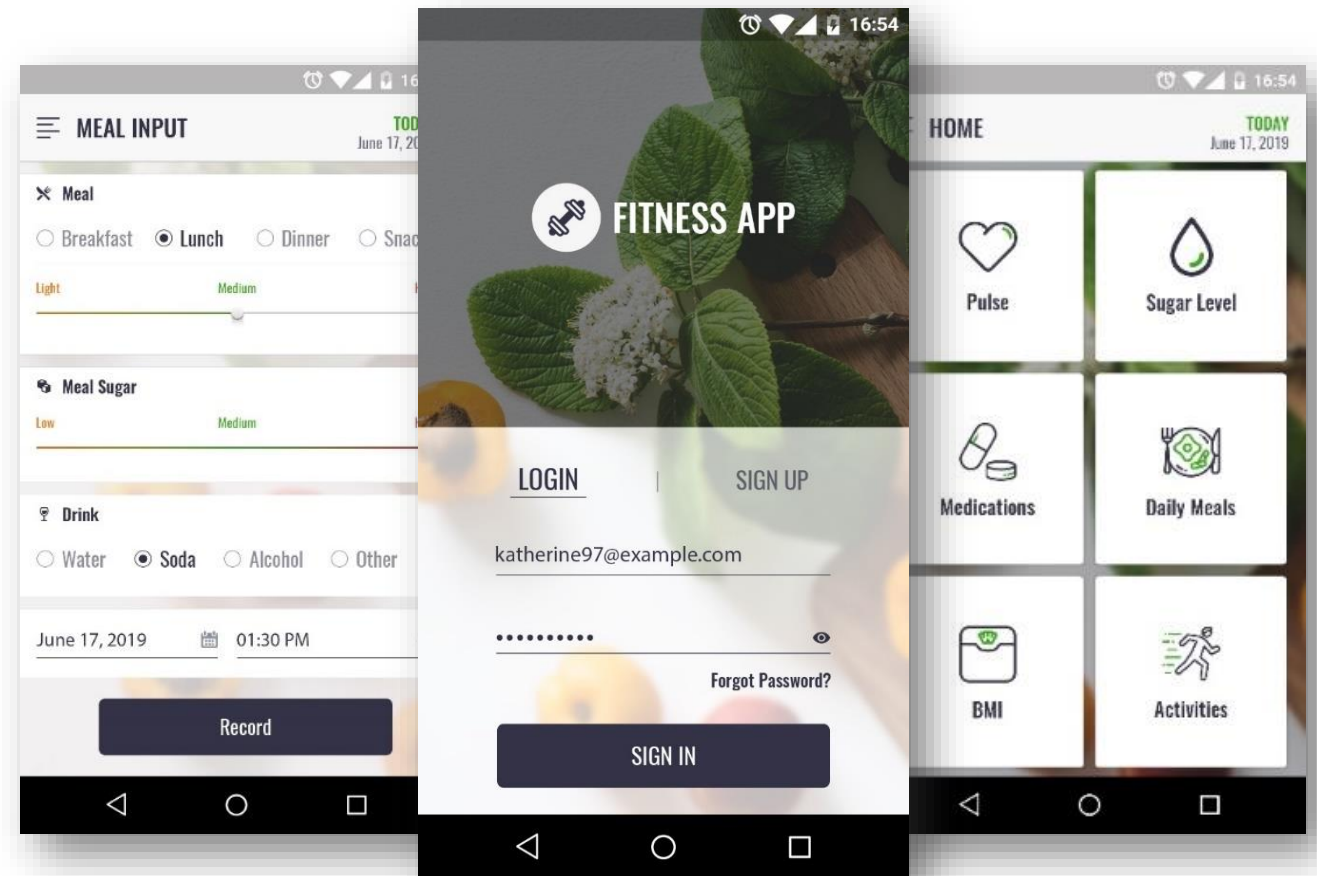

Domain: Betting

An IoT based healthcare app which helps you monitor your Heart Beats, Blood Glucose, Meal Plan, Activity and BMI using a simple wearable device. User can also set the schedule of prescribed medicines. A handy tool which takes personal healthcare to a new level.

## Solution highlights:

- User Profile with Health Data Recordings like Heart Beats, Blood Glucose, BMI
- User Activity Recordings like Active Minutes, Distance, No. of Steps etc.
- Reminder feature to alert user according to their Meal Plan & Medicine Schedule
- Connection with unique wearable device via Bluetooth
- In-App Notifications

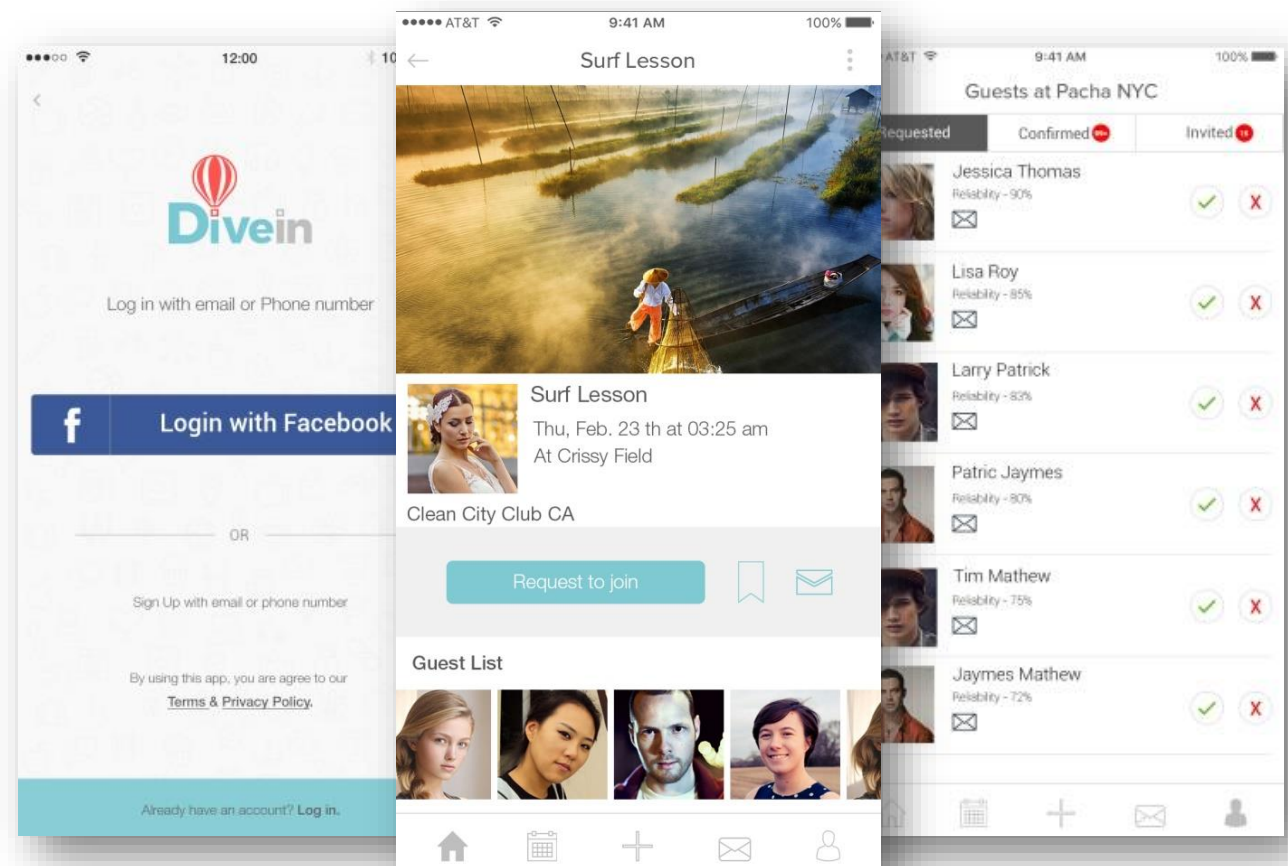

# DiveIn – The Event Management App

DiveIn is a social app that helps young people meetup and volunteer at non profit organizations in the San Francisco Bay Area. DiveIn's mobile app helps you discover and arrange social activities & events.

App has multiple roles which allows user to host or to participate in the events. Host can create events and invite friends/guests to participate. Visitors can search nearby events, mark it as favourite, send event joining request to host.

## Solution highlights:

- Facebook integration
- Geo-location
- Chat integration: one-to-one and one-to-many
- Real-time attendance marking
- Event share and management
- Deep linking
- Push Notification

**Domain:** Events

# Moves – Social Events App

Moves is a spontaneous way to find plans on any given night. Users are able to post private events on a map, called moves, visible to either all their friends or a selected group. Moves can range from a pre-planned party to a spontaneous hangout. Users can also see public events (or 'moves') posted by local businesses on their map specified to the user's interests.

## Solution highlights:

- Geo-location
- Social Media Integration
- Event share and management
- Push Notification using FCM
- Apple Maps Integration
- Backend: Java Spring Boot, PostgreSQL, AWS
- Frontend: iOS, swift 4, FCM, MapKit

Domain: Events

# The Sport Flow

Sport Flow is an iOS Real-time Analysis Coaching app which works on a phenomena of Record, Cut and Connect.

## Record

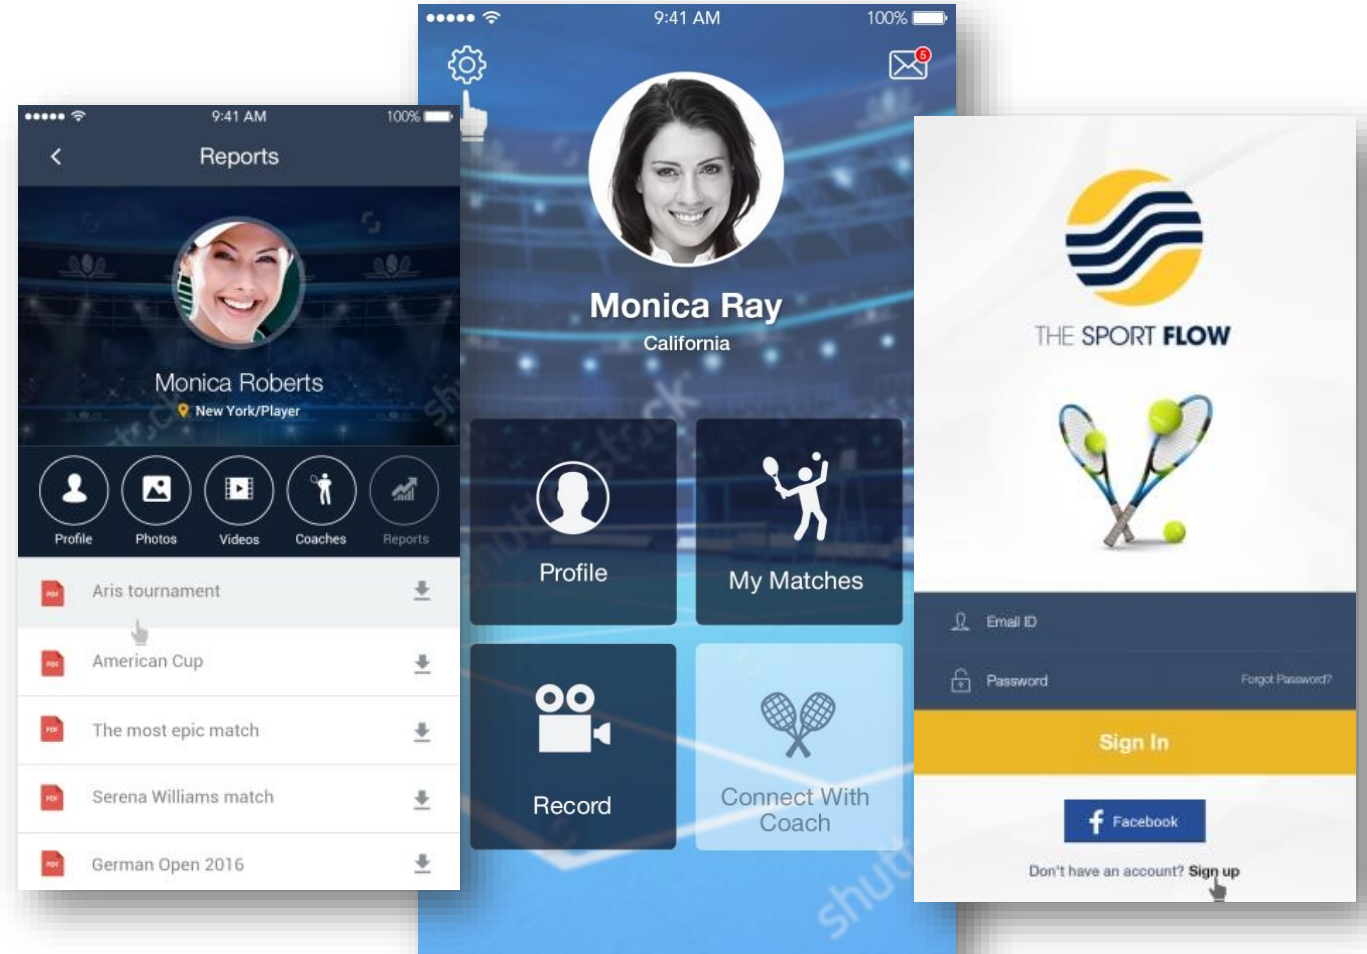

Record the tournament, practice or training session. It's a very simple platform for any user to record and share videos online.

## Cut

Special Algorithm cuts the video data to focus only on specific things that is necessary for the players to improve. The specially designed algorithm generates match statistics report as per the video uploaded by the user/coach.

## Connect

User can connect to various coaches and also share the match videos with his friends or family.

**Domain:** Communication, Sports

Travelbuds lets users find a partner when they are planning to travel around the world. User can add his itinerary and travel plans and set his preferences. Based on the preferences and travel plans, the app suggests matching travellers to the users. User can connect with them and make his travel plans accordingly. What's more is that you can share your itinerary on social media!

## Solution highlights:

- Social media login.
- Matchmaking based on travel preferences.
- One-to-one messaging.
- Geolocation Integration.
- Tinder-like swiping functionality.
- Social media sharing.

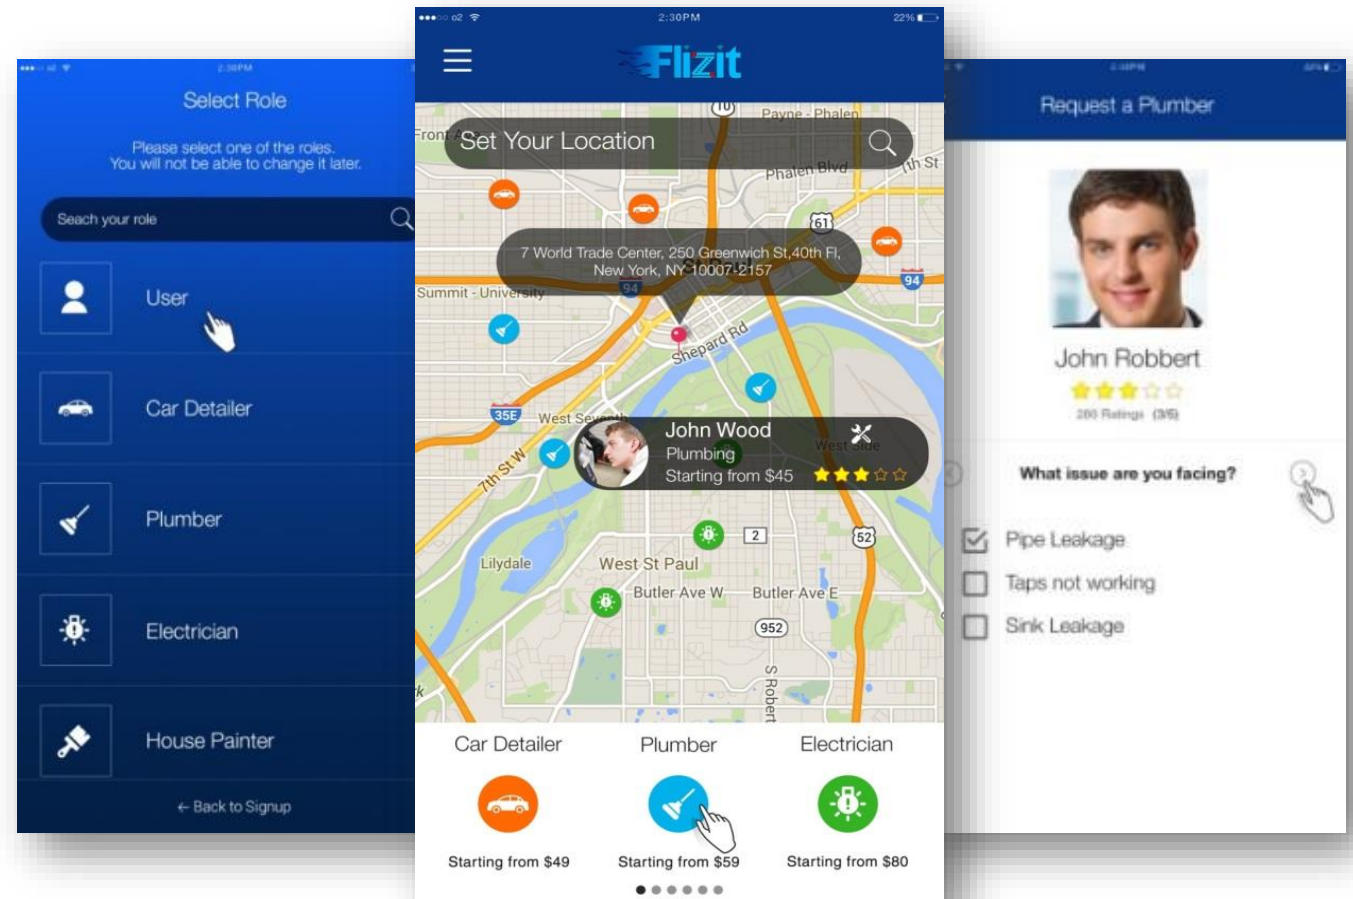

**Domain:** Dating, Travel

# Flizit-On Demand Service App

FlizIt is the on demand app, where customer demands for various services. Service provider accepts the customer request and provide luxury detailing service. We have developed cross platform app that runs on both Android as well as iOS.

## Solution highlights:

- User authentication.
- Geo-location integration.
- Stripe payment gateway integration.
- Push notification integration.
- Report generator.
- Rate/Review.

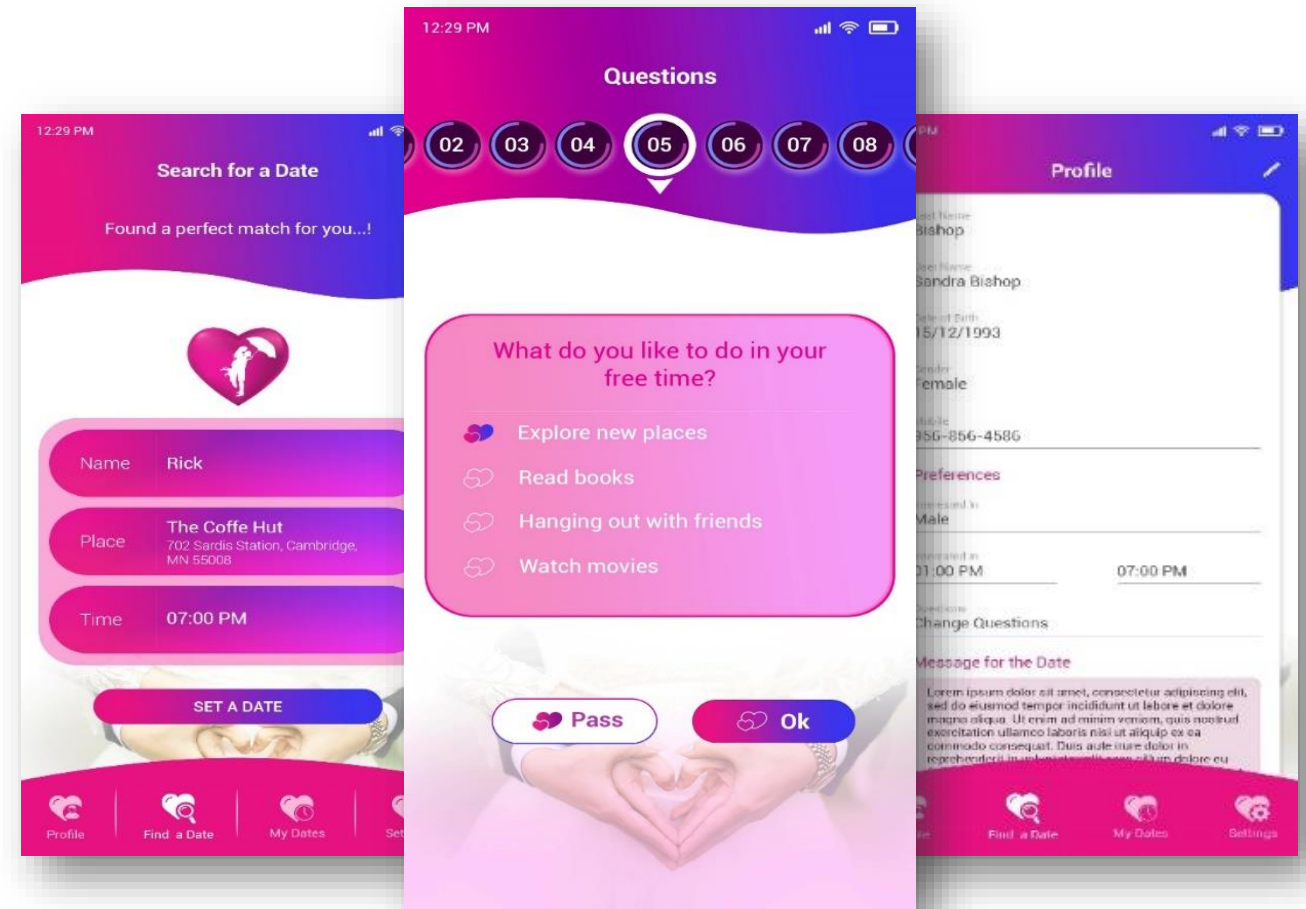

Domain: On-demand

# Blind Dating App

This is a unique 'Blind Dating' app for users to find a perfect partner with a matching personality. The app finds the best match for the user and sets up his blind date. This app does not have profile image and user gets to see his blind date only when they both meet. They can start communicating with each other one hour before their meeting.

## Solution highlights:

- Personality questionnaire to gather information for finding the best match.
- Date setup for the same day, instant date finding.
- Login using social media accounts.
- Instant push notifications.
- Social media sharing.
- One-to-one messaging.

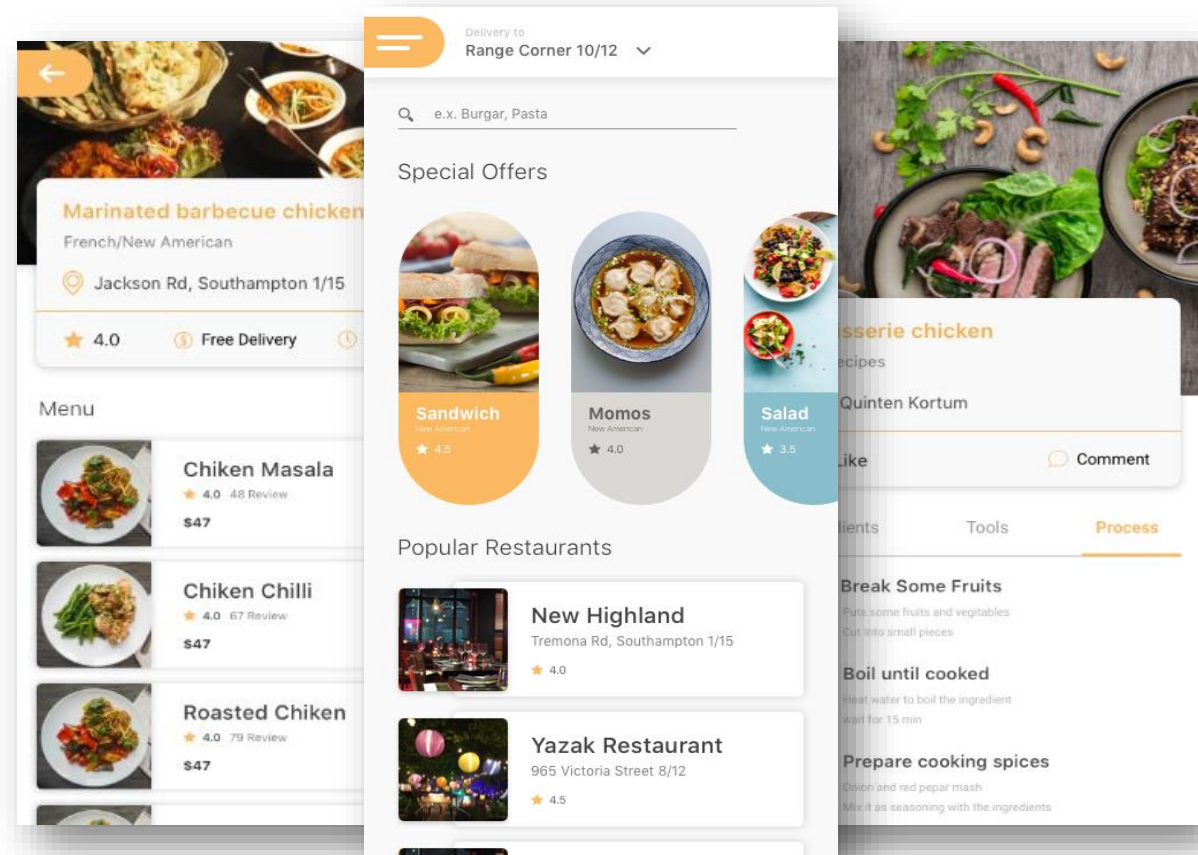

Domain: Dating

# Restaurant Menu App

This App had been made specially for restaurants in which and only Admin had the privilege to add the restaurant details. The Restaurant Managers/Owners were able to add the dishes, chef's related to them and also the list of products from which the users can have an allergy to. The users were able to see all the dishes from which they can have an allergy to and would give proper suggestions/needs while ordering it. They had an option to Add images, like a post, comment a post and add the restaurant/dish to favourites.

## Features:

- Facebook Login
- List of all dishes components in dishes with which the consumer can have an allergy.
- See featured Dish images, comment, like add to favourites
- Social Media sharing option for dishes
- Chef info/profile
- Provision for Pairing Wine which suits/matches the dish

Domain: Food

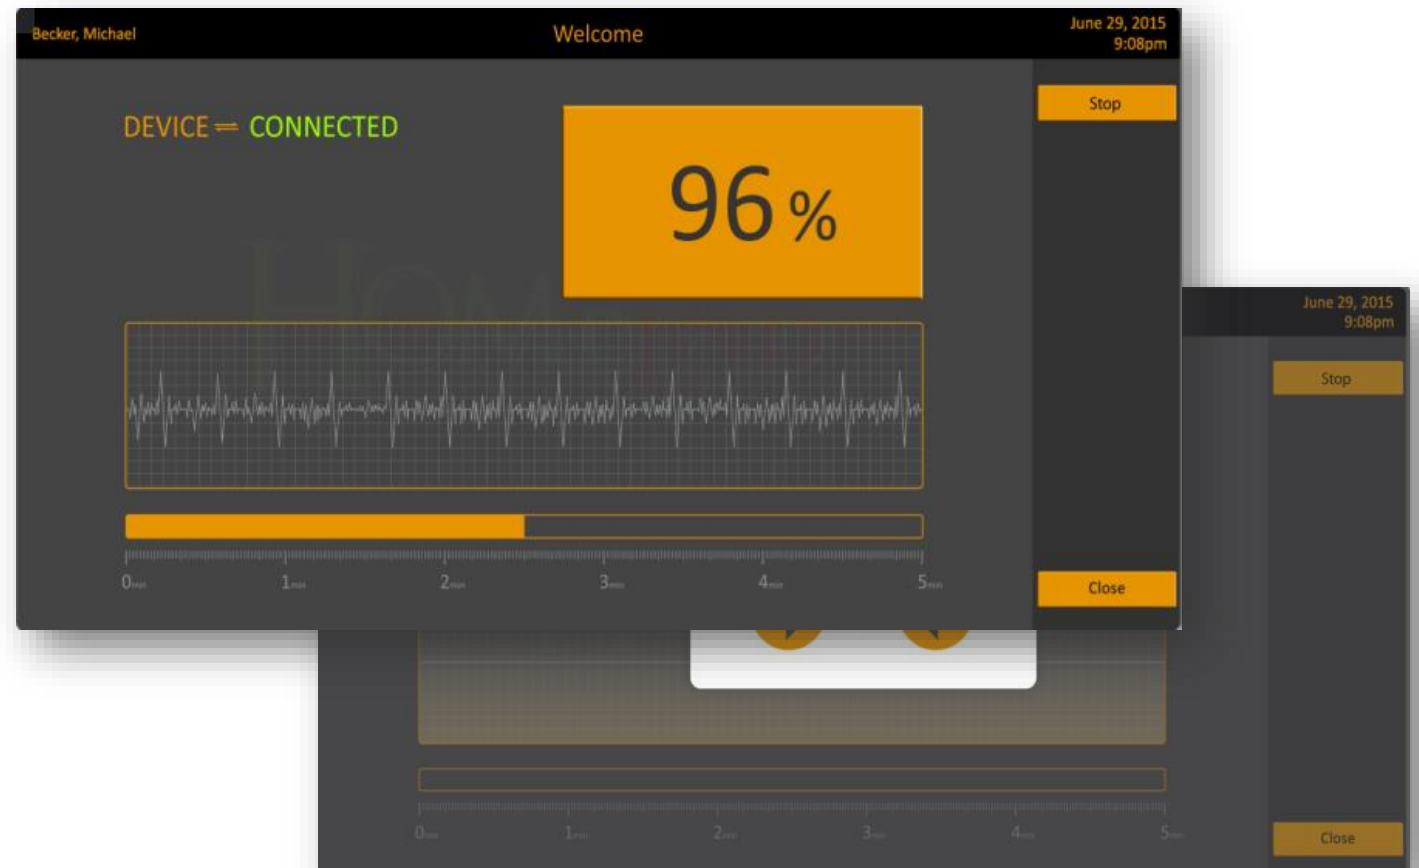

# Heart Rate Measurement App

Heart Rate Measurement is an application that helps you to measure your heart rates. Heart Rate Measurement (HRM) app analyzes your health level, display Stress level & Adaption status of in graphical format. You can view your measurement results any time using the application.

## Solution highlights:

- Cross platform-device compatibility
- Ability to connect with hardware device via Bluetooth
- Bluetooth scanning & detecting the sensors
- Converting the data from bytes to graphical format
- Geo-location integration
- Maintaining the user's history

**Domain:** Healthcare, IoT

# Sensor-based Speed Limit App

This app works with an IOT device to show a user the speed limit of the car on road that the user is traveling on. The IOT device sits inside a car and has an LCD display. This device shows the speed limit (constantly updating, based on the user's location) and warns the user with a beep once the user exceeds the speed limit. The app also allows the user to have a secondary user to monitor his/her driving habits by allowing them to receive instant push notifications when the speed of the car exceeds the limit.

## Solution highlights:

- BLE connectivity.
- Google Road API.
- Push Notifications.
- Buzzer/LED Flash Sound.

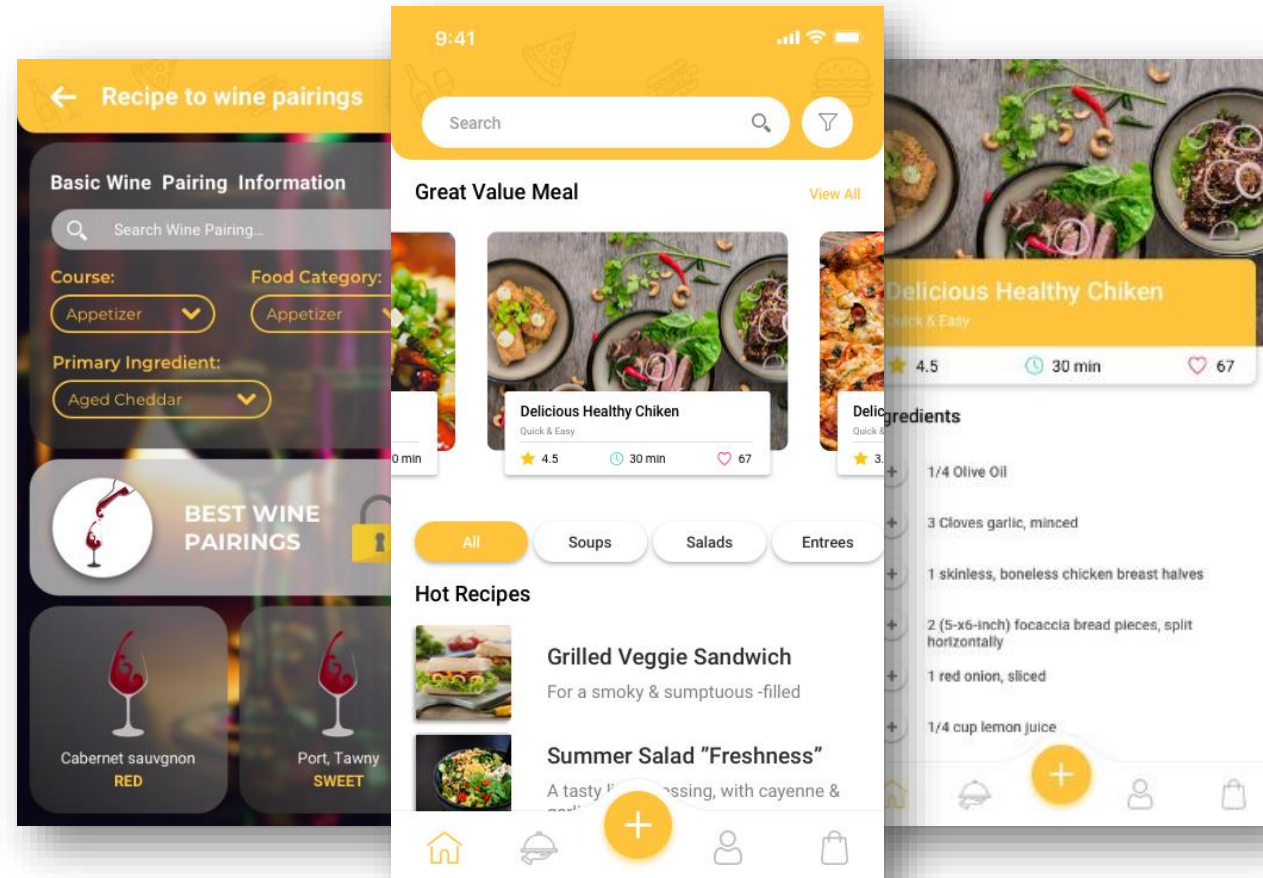

Domain: IoT

# Wine Pairings & Cookbook Recipes

This app is used by Wine connoisseurs across California and has a consumer base of around 5000 users. This App provides consumers with the ability to expand their wine varietal knowledge base, review over 1,400 wine varietal, primary ingredient combinations and select the “Best” wine varietal for any given recipe.

## Solution highlights:

- Available as both paid and basic versions
- Google Analytics
- Apple iAds for advertisements
- Push notifications using Pushwoosh
- Social Media integration
- Mobile Analytics

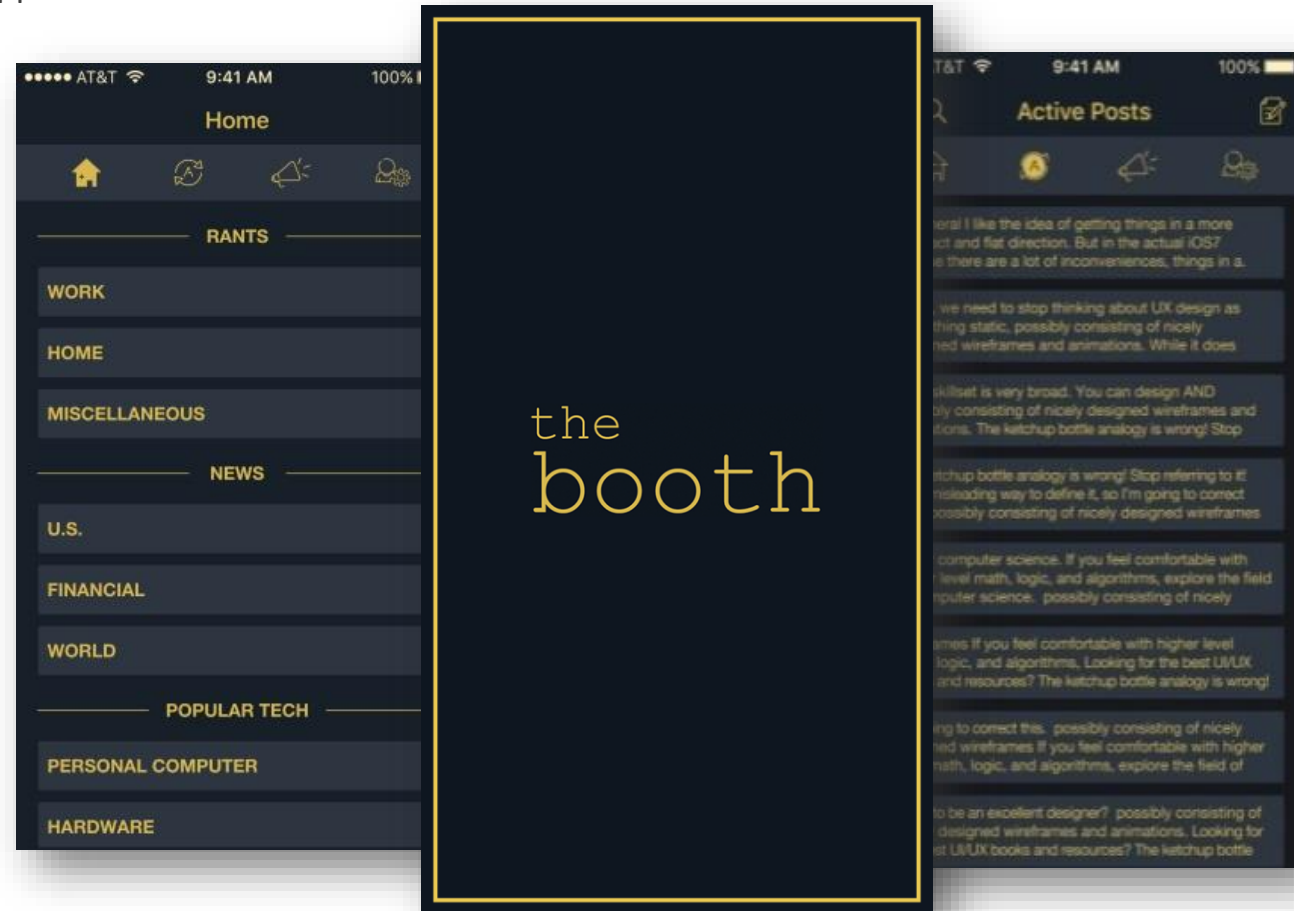

Domain: Food

# The Booth

The Booth is a Twitter-like social app which is very simple in terms of concept. This app has a provision for the users to easily post anything that they would like to share with the people using this app. The user can interact with a number of random people by commenting on their post and are updated on their screen randomly with fresh posts every time. This app has its own significance that it is only a text-based app and people of any age group or in any mood can share their feelings in a very quick time within the app.

## Solution highlights:

- Backend: Spring
- Frontend: Swift 4, Alamofire, Google AdMob
- Push notification - FCM
- Anonymous Chatting
- Real-time Messaging: Firebase
- Backend/Frontend Communication: RESTful API

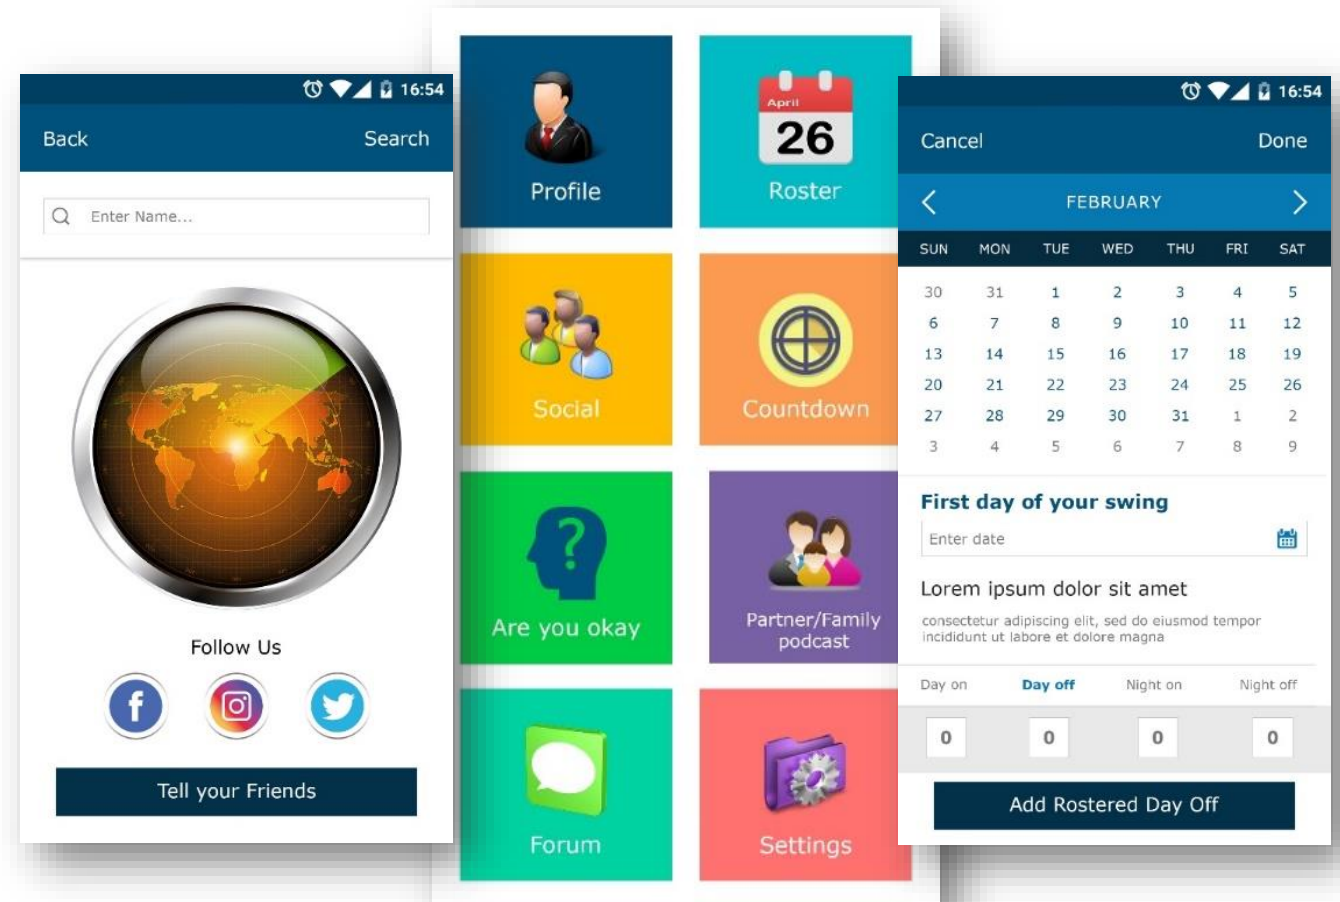

Domain: Social

An amazing roster app on which FIFO workers can completely rely for managing their roster/schedules. It eases the stress and issues of workers by keeping them connected with their loved ones and also providing mental health assistance. Workers can use the social side of this app create posts about any issues and people can comment on it with solutions or suggestions.

## Solution highlights:

- Custom User Profile with Roster/Schedule management
- Real-time Chat Function
- Countdown timers with milestone events
- Offline/Low Network Accessibility to the Roster/Schedule
- Geo-Location Integration
- Unique feature to search for family, friends and R&R buddies & knowing their location

# PROJECT COMMUNICATION OUTREACH

Following communication events are usually established for all Biz4Solutions projects:

- **Sprint Planning Meetings** We recommend 2 week sprints. Sprint planning meeting is held every 2 weeks to plan work for the sprint. The sprint planning meeting is attended by the product owner (Client), Scrum Master and the entire Scrum team.
- **Daily Scrum Meetings** The Scrum Master conducts daily scrum meetings in the mornings. All team members are required to attend scrum meetings. Since both the Scrum Master and product owner are committed team members, they are expected to attend and participate. Anyone else (for example, a salesperson, SME, or a developer from another project) is allowed to attend, but is there only to listen. This makes scrum meetings an excellent way for a Scrum team to disseminate information.
- **Weekly Sprint Status Reports** The Scrum Master shall provide written status reports to the Client Product Owner. The reports shall include the following information tracked against the Sprint Plan:
  - Summary of tasks completed in Current week
  - Summary of tasks scheduled for completion in the upcoming week
  - Summary of issue status and resolutions

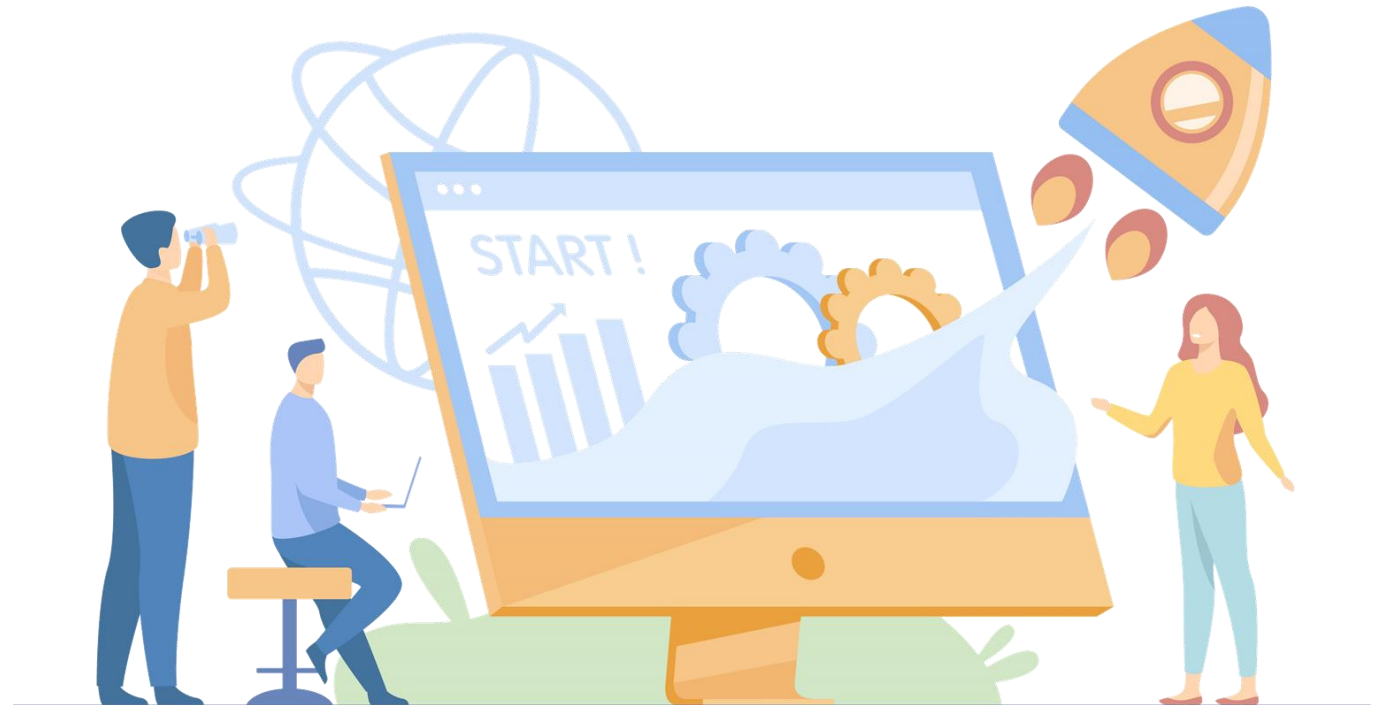

# RESOURCE MANAGEMENT

Project will consist of the following resources of each who would be designated especially for your project and would be working on it for full time i.e. 40 hrs./Week using Agile methodology:

- Business Analyst/Scrum Master – Associated with you right from project conceptualisation to final deployment
- Delivery Manager- Continuously co-ordinate with you and would decide the formation of the team and allocate duties to them
- UX Designer
- Front End Developer
- Back End Developer
- Tester

**We always have a 15% on bench criteria who can be utilized for your project anytime and help your project complete earlier.**

## Code quality

- Use of standard coding checklists / style guides
- Proper use of code comments / documents
- Peer reviews to ensure adherence to set processes

## Regression testing

- Thorough regression testing by a dedicated QA team
- Eliminate bugs that might have slipped through system / integration testing
- Smoke/sanity, part and full regression to include requirements & functional validations

## Performance testing

- Validate system responsiveness, speed, scalability and stability under variety of load conditions
- Includes load/stress testing, scalability and volume testing

## Lab testing

- In-house testing using iPhones, iPads, Android Phones and Tablets
- Covers latest iOS and Android versions

## Communication and Visibility

Total visibility to the project cycle and to the team.

Written pre-approval taken for every new piece of work.

Well defined escalation and communication plans for each project.

Your **BUSINESS** is  
**IMPORTANT** to us

## IP Protection

NDA signed upfront.

We sign IP protection contracts.

Team members are required to sign NDAs when joining.

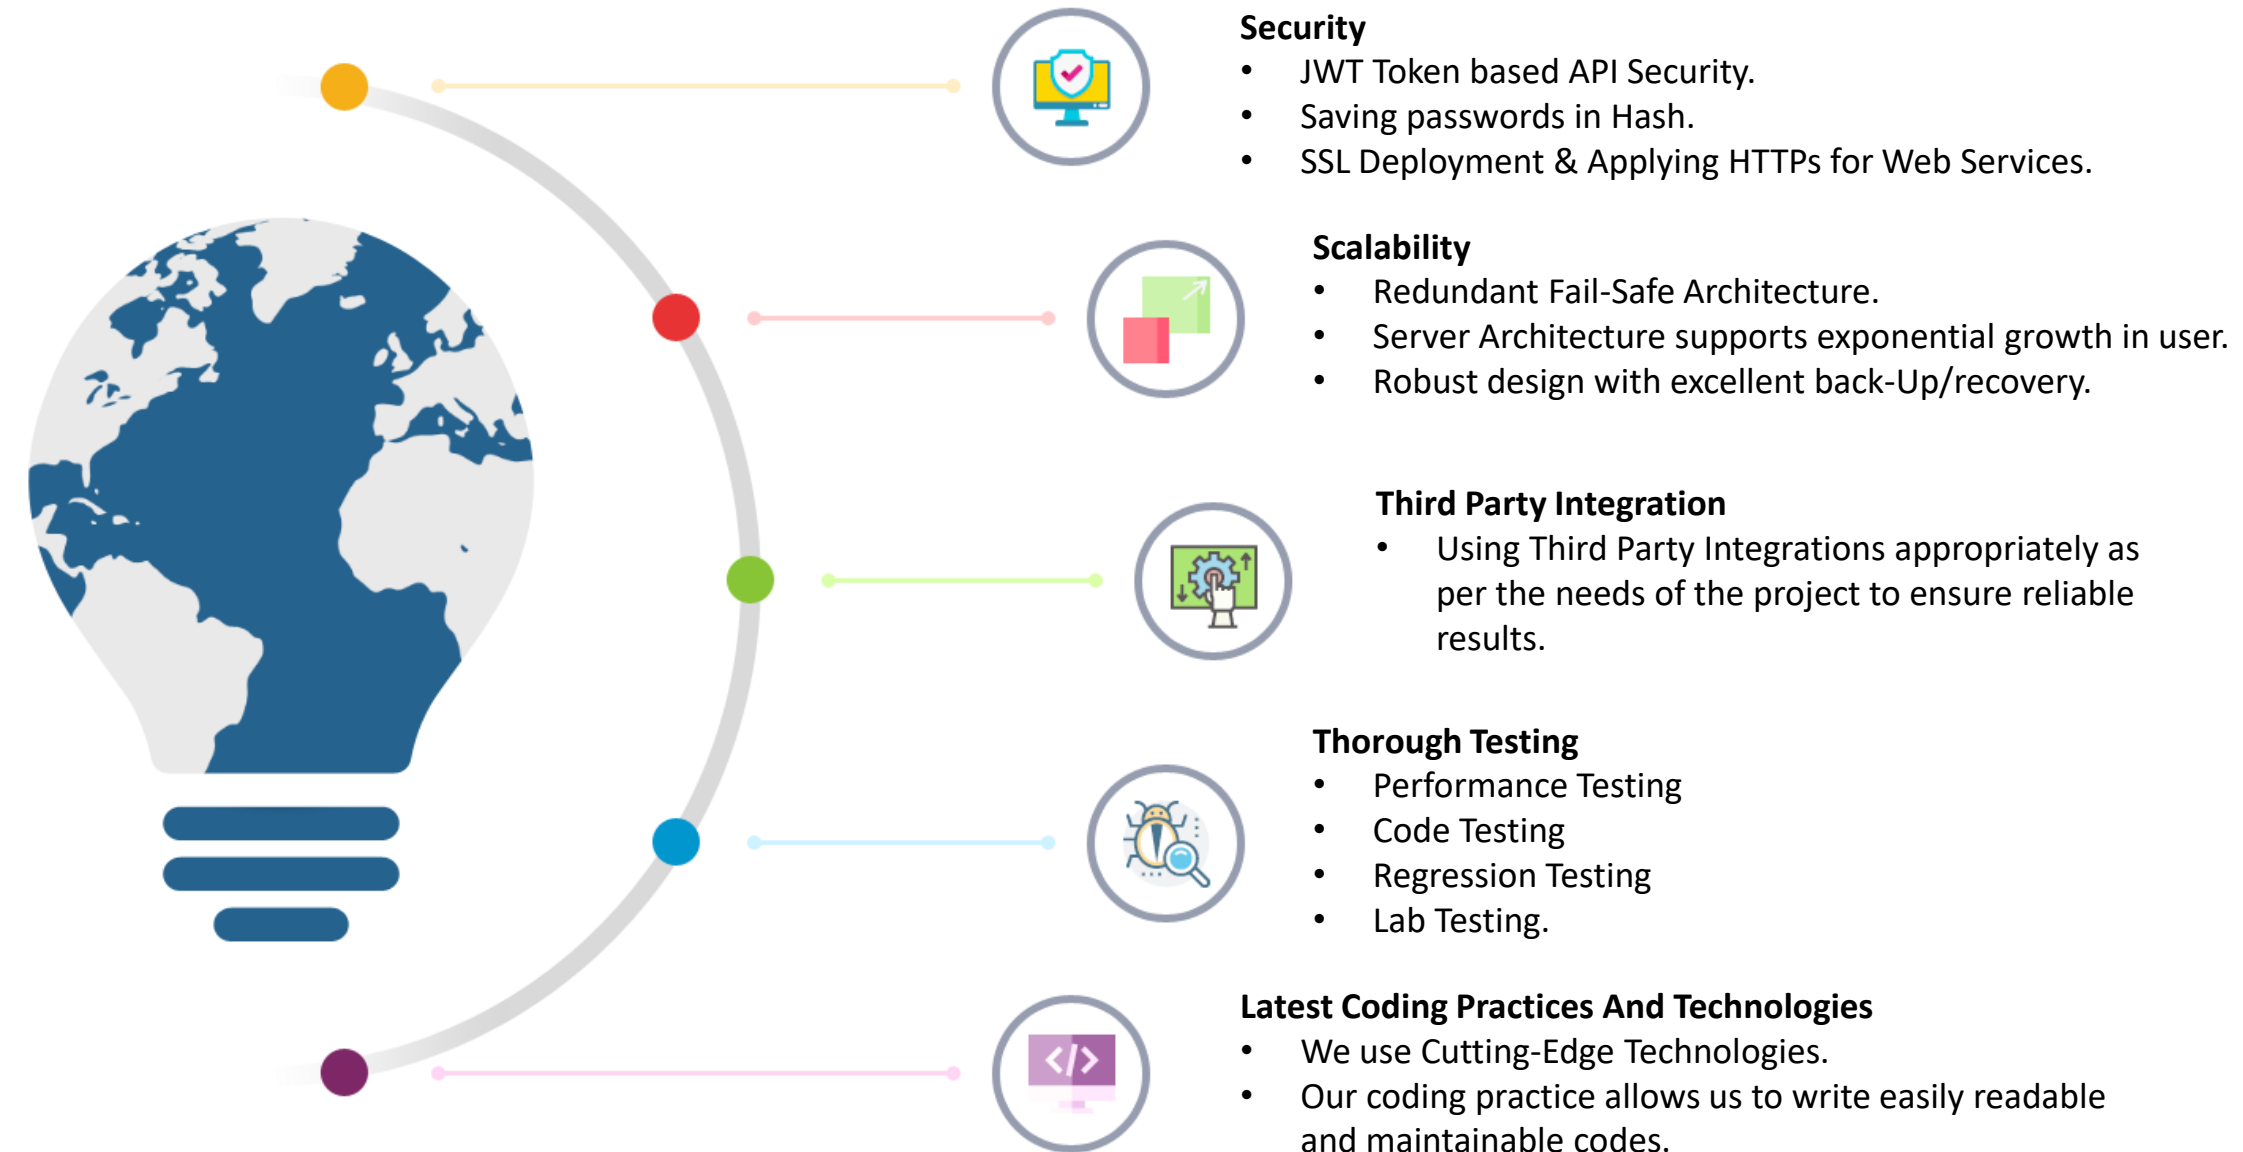

## Communication and Visibility

Technical and Management Reviews of engineering process.

Analysis and design of critical design items by leadership.

Sprint based rapid technical development and quick feedback.

# SALIENT FEATURES OF OUR SOLUTIONS
