Kevin Christopher

Senior Full Stack Engineer

SUMMARY

- Experience with Architecture, Design and Development of **Object Oriented Software Systems** and building complex, high performance, scalable and easily **maintainable solutions** for N - tier, Web, and Distributed applications.
- **8+ years experienced React Developer** with hands-on experience in identifying web-based user interactions along with designing & implementing highly-responsive user interface components by deploying React concepts.
- **Proficient in translating designs & wireframes** into high-quality code, and writing application interface code via JavaScript and ReactJS workflows.
- Comfortable working with **MEAN, MERN** stack.
- Adept at monitoring & maintaining frontend performance and **troubleshooting & debugging** the same to bolster overall performance.
- Experience in developing backend projects with various frameworks **Express.js, Java Spring Boot, Asp.NET Core Web API**.
- Experience in database programming using **MySQL, PostgreSQL 9.3 and MongoDB**.
- Experience in various DevOps tools such as **Github, Gitlab**.
- Experience with web hosting with **AWS, Godaddy, DigitalOcean**.
- Experience with team task and ticket management system with **Trello, Github** and so on.
- Extensive experience in IDE and debugging tools like **Visual Studio 2022, Visual Studio Code, Eclipse** and Rational Application Developer.
- Developed crypto rest services using **NodeJS & Web3JS** and integrated services with HSM(Hardware Security Module).
- Worked on many Operation system environments including **Windows, Linux, Ubuntu**.
- High adaptable in quickly changing technical environments with very strong organizational and analytical skills.
- Experience in working with **team members** and high **communication skill**.

PROFESSIONAL EXPERIENCE

Sr. React + (NFT & Express.js + Web3) Developer

Oct '22- Present

Remote | TANKED GIL SCHOOLIES

Upwork.com

Now, I am working with Ashar Shaikh, Unity Developer of this company.

1. React+TypeScript + Web3

- Built React(TypeScript + Eslint) based initial project and main workflow.
- Dashboard page NFT viewer using **Swiper.js**.
- Implement cart & purchase flow with **paypal payment** system.
- Wallet connection part using rainbow-me/rainbowkit.
- NFT minting workflow using web3 & ethers.
- Host front-end project on **nft.tankedgilschoolies.com**, sub-domain under **tankedgilschoolies.com** on Godaddy.

2. Express.js + MySQL

- Simple authentication flow for initial workflow.
- Host back-end on **nft.io.tankedgilschoolies.com**, sub-domain under **tankedgilschoolies.com** on Godaddy.

3. NFT(ERC1155) + Marketplace smart contract + Solidity

- Rebuilt smart contract project using Truffle.
- Coding APTOS NFT, Marketplace using solidity and deploy 2 contracts on AVAX Test network.
- Testcase about APTOSNFT.sol & APTOSMarketplace.sol.

*** Online

*** Github

<https://github.com/devstar0703/APTOS-PROJECT>

<https://github.com/devstar0703/APTOS-NFT-Contract>

<https://github.com/devstar0703/APTOS-Backend-Express>

**** I am minting all assets of characters as NFT on AVAX test net and waiting new Figma design from Ashar Shaikh

Sr. React + (GCP & Express.js) Developer

Mar '21- Sep '22

Remote | SOLSTICE

New York

I have worked for MVP & v1.0 with Christopher Groe, PM of SOLSTICE company.

1. React + Firebase(GCP)

- Implemented **Webpack** to build Typescript modules in V1.0 step.
- Built **reusable code** for future use and **optimized web pages**(Eslint).
- **User-friendly** mobile web page.
- Authentication workflow using firebase : google, reCaptcha, phone, email and password authentication.
- Email & phone verification flow using firebase.
- Restricted or Public link distributing flow in product page using **Twilio**, **Email.js** libraries.
- **Various chart** of dashboard page using react-apexchart library.
- Multi-Digital asset security UI using **canvas**, **pdf-viewer** and so on.
- Transaction data management using firebase Real-time database.
- Some security firebase backend functions development using **Express.js** & deploy it on GCP.
- [Editing photo] UI of Setting Page using only **CSS3 and canvas**(Not Plugin).
- Created **features** to enhance the **user experience** while ensuring that the web design is **optimized for smartphones**.
- **Stripe** payment infrastructure system using stripe 3rd party api.
- Parsing CSV files, converting csv to json flow using json2csv and react-csv library in Customers page.
- Involved **Jest** test and debugging.
- Frontend project hosting using **Godaddy**.

**** Additional Work at Main Stack Outside on Blockchain Part.

- Product creating workflow using IPFS.
- Wallet connection part using @rainbow-me/rainbowkit library.
- NFT minting flow using web3.js.
- SOLSTICE ERC20 token & ERC1155 NFT development using Solidity.
- RSA encryption and decryption logic about product uploaded in IPFS using crypto library.

React(TypeScript) + Asp.NET Core Web API Developer

Oct '19- Jan '21

Remote | Tepe

Freelancer.com

I was hired by Jaser Jsk, Sweden developer of Tepe company and implemented below tasks.

I have proved my Senior react skill more powerfully through HTML Dom & functional algorithm on Wireframing.

1. React(TypeScript)

- **Reusable & Optimized Components** related with Dashboard page (framer-motion node module for animation)
- **Wireframe** operation of 2D object(SVG image object).
- Development of **hook functions** about to local storage(react-use, context) for selected products temp store.
- Loading effect of component before download bundle file using **{ lazy } from 'react'**.
- Mui various component customization using callback in **styleOverrides**.
- Built **reusable theme** with color + dark mode using hook, Mui palette, typography.
- Implemented web socket connection part using **@microsoft/signalr** on alert message.
- Integration Typescript based **Redux** workflow.
- Built beauty code with powerful code style using **Eslint grammar**.
- Patient **schedule management** page ui(@aldabil/react-scheduler + react-calendar-timeline).
- Twilio backend API integration using axiosHelper.
- Multi-language platform using **context hook + local storage**.
- Testcase of all components using **Jest**.

2. Asp.NET Web API

- Implemented web socket using **SignalR**.
- Built ASP.NET Core Web API using **Entity framework**.
- Built Test Project using **xUnit**.
- ASP.NET Twilio api integration.
- Project Hosting on DigitalOcean.

Sr.React Developer + (Express.js & Stripe) Developer

Apr '18- Aug '19

Remote | Vinovest

Upwork.com

Mainly I have worked on new designed whiskeyvest.co site with Phouc, India developer of Vinovest company.

1. React(JavaScript) + WebPack + Eslint

- Update old **webpack.config** to build TypeScript module.
- Multi-language platform using **i18next** library.
- Routing authentication using { Security, useOktaAuth }, { OktaAuth } from (**@okta/okta-react** & **@okta/okta-auth-js**) library.
- Building **self-contained, reusable, and testable** modules and components.
- Integration new sub-nav structure to old **Reusable Sticky navbar** component for new whiskeyvest.co site.
- Blog creating page UI using { **CKEditor** } from '@ckeditor/ckeditor5-react' & **ClassicEditor** from '@ckeditor/ckeditor5-build-classic' and then **customized UploadAdapterPlugin** to store blog image inside Express backend storage.
- Implement interview schedule flow using **calendly API**.
- Various **animation effects** & mobile responsive for new designed whiskeyvest.co.
 - Landing page panel animation using CSS animation.
 - Dashboard page slider component using styled-component and CSS(not plugin).
 - Blog page pagination component using styled-component and CSS(not plugin).
 - Animated Button, Dropdown, Select, Modal, Checkbox components using styled-component and CSS(not plugin).
- Loading component inside **suspense-fallback** props in each router.
- **Redux workflow** to interact with Express.js backend.
- Beauty & Powerful code style(**Eslint + Prettier**).
- User-friendly mobile responsive with pixel perfect match.
- Involved test and debugging using **Jest**.
- Frontend & Backend hosting using **AWS**.

2. Express.js + Node.js + MongoDB + Stripe

- Integrated **sucrase** compiler for developing backend project using import/export grammar.
- **Stripe** Payment flow using stripe 3rd party api on backend side.
- Set up **helmet, cors, rate limiting** middleware for security on backend.
- Implemented JWT passport middleware.
- **Pagination functions** for request about large wine blogs list.
- Some mongoose schemas and high relationship mapping.
- **Upload image middleware** for api to store blog images on backend storage.
- Update notification api part using **socket.io**.
- Email verification, Forgot password, Change password flow.

```
"dev": "nodemon src/server.js --ignore __tests__",  
"debug": "node --inspect-brk -r sucrase/register src/server.js",  
"lint": "eslint \"**/*.js\" --ignore-pattern node_modules/ --ignore-pattern dist/",  
"build": "sucrase ./src -d ./dist --transforms imports",  
"start": "node ./dist/server.js"
```

Ionic-Angular Developer

Apr '17- Feb '18

I have worked with Wilson Mupfururirwa from Africa.

Ionic-Angular+ Firebase

- Built and tested Ionic-Angular app using Android Studio & Emulator & Real Phone.
- Designed the migration of Ionic app to **Angular** platform with **NgRx**.
- Implemented various features like **Dragging, cloning** in Ionic.
- **Wireframing** of 2D image object(svg) for patient status on body pain points.
- Pixel perfect match design from **Figma**.
- Save all data of patient to firebase.
- Integrated api and customized style on **Google map** to show patient distribution and alerts.
- **Vibration** function when receiving emergency message of patient's condition.
- **Patient interview schedule management system** using calendly API & fullcalendar npm package.

*** Github

<https://github.com/devstar0703/SCD-Ionic-Angular>

React + (Express.js, MongoDB, Spring Boot, MySQL) Developer

Jun '15- Mar '17

Remote | Kamermans Holding

Freelancer.com

1. DEFI (React + Express.js + MongoDB)

React.js

- Designed responsive web pages using **media queries** and **SCSS**.
- Working with React router for developing **SPAs**.
- Experienced in developing **React components**.
- Working experience with **TypeScript** new features block scope, type restrictions, decorators, arrow functions, classes, interfaces, modules(import and exports).
- Used **axios** with React.js for making AJAX Calls.
- Wallet connection part using **web3Modal**.
- Staking, Balance page ui with mobile responsive(converting backend json object data to 2 dimensional array using **Object.entries**).
- Implemented web3 part to get user wallet information data(**web3.js**).
- Some CRUD on admin page related with token using CKEditor, Pdfjs-Worker library.
- ERC20 based token **deposit and withdraw** flow using web3.js.
- 3rd party API to get large data from **Coingecko**.
- Involved **Jest** test and debugging.

Express.js

- Implemented **Eslint** code style for maintainable project.
- Implemented high quality folder structure.
- JWT authentication workflow using **passport-jwt**.
- Implemented validators about all api endpoint(**yup**).
- Worked with Crypto, User, Wallet, Order **schemas** and relation mapping for data to interact with MongoDB.
- **Weighted average** calculation logic for crypto price.
- **Restful api** related with crypto exchange, trading, order workflow.
- Order, trading data stream using web socket(**socket.io**).
- Staking end point and Payout auto check using **CronJob**.
- Project Hosting using DigitalOcean.

2. CEFI (React + Spring Boot + MySQL)

React.js

- Optimized and intuitive Crypto Exchange Page UI.
- Low-latency, bidirectional and event-based communication using socket(**socket.io-client**).
- Trading view widget using **react-apexchart** library.
- Simple animation on dashboard page(**aos**).
- Payment flow using **NowPayment** 3rd party API.
- **User friendly web page** and mobile responsive.
- Multi-Language platform using **createContext, useContext** Hook.
- User authentication workflow including **2FA authentication** logic such as sign up, sign in, forgot password and so on.

- Integrated poloniex 3rd party api using axiosHelper.
- Implemented routers authentication using @okta/okta-react with SSL certification logic.

Spring Boot

- All the functionality is implemented using **Spring Boot** and Hibernate ORM.
- Implemented Java EE components using **Spring MVC, Spring IOC, Spring transactions** and **Spring security** modules.
- Used Micro service architecture with **Spring Boot** based services interacting through a combination of REST.
- Involved in spring programmatic transaction management using **AOP** and using **Spring Batch**.
- Used spring core to define beans for services, entity services and corresponding depended services.
- Used **spring framework** for integrating the MVC components with business services.
- Involved in **JUnit** Testing, debugging, and bug fixing.
- Deployed applications on **Apache Tomcat Server**.

EDUCATION

Bachelor's Degree of Computer Science

Mar '11- May '15

Singapore University of Technology and Design

Singapore, Singapore

When I was a student, I tried to get skills such as computer science, math and statistics to become a good software developer.

My GPA Score was 4(A) as a talent student.

After graduated from university, I have been started working on several projects.

KEY SKILLS

Coding

Application Designing

Wireframe

Testing & Debugging

Webpage Designing

Webpage Optimization

Front-end Architecture

Back-end Architecture

Performance Improvement

Feature Designing

Web Hosting

Project Delivery

Client Surviving

Graphic Designing

TECHNICAL SKILLS

- Basic Programming Language

HTML / CSS3 / C# / Python / Java / JavaScript / TypeScript

- JavaScript Based Framework

React, Angular, Vue

- Database

MySQL / MongoDB / MS SQL / PostgreSQL

- Backend Framework

Express.js / Asp.NET Core / Java Spring Boot

- Styling Library + Framework

Mui-Material5.0 / Bootstrap 5.0 / Ant Design / Tailwind CSS

- **Additional**
Web3.js / ethers / Solidity

INTERESTS

Blockchain Industry
