EDUCATION

Bachelor of Engineering
Information Systems Technology
and Design
Singapore University of
Technology and Design
2011 - 2015
Singapore

SKILLS

Languages

JavaScript

Python

C/C++

PHP

HTML/CSS

.Net

Ruby

Golang

Technology

Blockchain

Artificial Intelligence

Augmented / Virtual Reality

CAREER OBJECTIVE

I'm a focused professional with 8+ years of experience and a proven knowledge of advanced technology, configuration management, and programming. Aiming to leverage my skills to successfully fill the role at your company.

WORK EXPERIENCE

Full Stack Engineer

Swell Network Company

Apr 2022 - Oct 2022 / Australia

- Product: Decentralized liquid ETH staking protocol that is built for stakers, node operators, and the Ethereum ecosystem
- Web(Company): <https://www.swellnetwork.io>
- Web(Product): <https://www.app.swellnetwork.io>
- Tech-stack: Web (React.js / Typescript + Node.js / GraphQL / Apollo Server + PostgreSQL + Smart Contracts / Solidity / Ethereum)
- Planned the smart contracts structure with separated contracts and Escrow contracts for security and audit and developed mainly part in smart contracts using Hardhat environment in Solidity.
- Made this platform let users can register own node operator with their idea and user can stake and confirm to their favorite node operator in the list.
- Developed the smart contracts for swETH token (company token) based on ERC20 and swNFT token(NFT token) based on ERC721 and deployed into 3 different networks and connect contract using Infura and Alchemy node.
- Used Proxy and Storage logic for smart contract security improvement and integrated openzeppelin to smart contract for security logic myself.
- Implemented swNFT contract to upgradable and pausable for maintenance and extend contract.
- Integrated contracts into FE using Web3.js and wallet(Metamask / Coinbase / Fortmatic / Portis) connection into React.js based project.
- Developed FE using React.js / Typescript and used Apollo GraphQL Server for Backend and used PostgreSQL as DB.

Lead Developer

Synesis.one

Clouding Engines
Automation
WebRTC

Oct 2021 - Apr 2022 / United States

- Product: Blockchain NFT Marketplace platform and Data yield farming and staking platform
- Web(Company): <https://www.synesis.one>
- Web(Product): <https://www.kanon.exchange>
- Tech-stack: Web (React.js / Typescript + Smart Contracts / Rust / Solana)
- Designed and develop the infrastructure and well-formed project of data yield farming DApp and NFT marketplace DApp from scratch.
- Made able to users who staked SNS token (company token based on SOL) can post a question and also answers for each questions, and also can validate others answers.
- If the answer validated then the user can get reward with SNS token and all the validated answers and questions are provided to the AI company as a training data.
- Made able to users can upload their collections via NFT minting and airdrop and also can buy the others collections via sales logic of marketplace.
- Developed the smart contract of each platforms using Solana Anchor (Rust) mainly focused on code & storage optimization for less gas fee.
- Developed the frontend using React.js / Typescript + Web3.js integrating phantom wallet connection.

Full Stack Developer

Solstice

May 2020 - Sep 2021 / United States

- Product: Social digital product marketing platform using NFT and stripe payment integration and social distribution
- Web(Product): <https://www.solsapp.com>
- Tech-stack: Web (React.js + Firebase + Node.js + IPFS + NFT + Smart Contracts / Rust / Solana)
- Developed the NFT marketplace logic for digital product marketing using Solana (Rust) and Firebase for backend development using firestore.
- Implemented IPFS private/public logic and RSA algorithm based encryption for secure digital product management and product link distributing logic via social platforms - LinkedIn, Twitter, Youtube, Tiktok and phone sms (twilio.js) / email (email.js).
- Made this platform let users can upload several kind of products (video, audio, image, doc, license, etc) and sell / buy products using card (FIAT) via stripe (stripe.js) or coin as they want.
- Developed several kinds of selling logic (Legendary / Rare / Recurring / Free) for product marketing and bidding price logic and reselling logic for buyers and creators.
- Recommended team members (blockchain engineer, mobile engineer, QA tester) on this project and lead them as a PM to archive completion of MVP and v1.0

Full Stack Developer

Roci Finance

Sep 2018 - Apr 2020 /

United States

- Product: Liquidity protocol that provides lending, borrowing function with liquidity provide using NFT and Oracle
- Web(Product): <https://www.roci.fi>
- Tech-stack: Web (React.js / Redux-Saga + Web3.js + Smart Contracts / Solidity / Hardhat)
- Designed the Roci FI lending platform architecture and smart contract architecture from scratch focused on security and optimization.
- Suggested to use Proxy and Storage logic for smart contract security improvement and integrated openzeppelin to smart contract for security logic myself.
- Made this platform let users can lend money or liquidity provide to the platform and get the income after the contract finish and also can borrow money from the platform when they need it. Implemented AMM logic for exchanging between the user token and company token.
- Took part in smart contract development with contract developers for lending platform contract.
- Developed NFT based User wallet score generate off-chain application using Oracle myself and integrate this into lending platform.

Lead Developer

Maxos Studio

Feb 2017 - Aug 2018 / United States

- Product: Accelerating investor engagement yield farming DApp
- Web(Company): <https://www.maxos.studio>
- Tech-stack: Web (React.js / Redux-Saga + Web3.js + Smart Contracts / Solidity / Hardhat)
- Planned the smart contracts structure with separated contracts and Escrow contracts for security and audit and developed mainly part in smart contracts using Hardhat environment in Solidity.
- Made this platform let companies can register new pool with their idea and investors can stake and confirm to their favorite pools in the list and all of these pool status are tracked and managed by the holding company.
- Developed the smart contracts for company token based on ERC20 and NFT token based on ERC721 and deployed into 3 different networks and connect contract using Infura and Alchemy node.
- Integrated contracts into FE using Web3.js and Metamask connection into React.js based project.

Full Stack Developer

Kamermans Holding

Oct 2015 - Dec 2016 / Aruba

- Product: Decentralized Exchange Platform where companies registered in the Caribbean can list ERC-20 tokens.
- Web(Company): <https://www.kamhol.com>

- Web(Product): <https://www.calahex.com>
- Tech-stack: Web-CeFi (React.js / Redux-Thunk + Laravel), Web-DeFi (React.js + Web3.js + Smart Contracts)
- Designed architecture & DB & UI/UX from scratch with my last experience above myself.
- Made this exchange platform (hybrid - Centralized and Decentralized) let users can deposit and withdraw several kinds of coins (BTC, ETH, USDT, USDC, DAI, etc) and convert / exchange these tokens and ERC20 tokens as the bidding price or market price.
- Suggested and implemented AI based financial solutions to avoid risk from high-changing price of cryptocurrency pairs.
- Developed smart contracts for ERC-20 tokens exchange and management.
- Recommended my team members (talented & well-experienced developers) on this project and lead them as a PM to archive completion of CALAHEx v1.0
